Cc: Fauci, Anthony (NIH/NIAID) [E] [redacted] (b) (6)>
Subject: National Blood Supply

Dear Dr. Fauci: I am an ex-alumni from the Department of Transfusion Medicine at the NIH. I am sorry to bother but I wanted to notify the Coronavirus Task force about potential blood shortages if blood centers get blood drive cancellations due to the fear in the public.

We are starting to see this locally and my concern is that other blood centers in the country are facing the same issue.

I tried to contact the office of the vice president, and all I could do was to send an email, which might get lost among thousands.

I am hoping you see this and perhaps bring this to the table. Blood centers use updated federal information when educating donors, staff and hospitals but the current fear is triggering blood drive cancellations. This might be experienced nationally and will impact the national blood inventory.

Thank you

Importance: High

Dear Dr. Fauci,

First let me say we are very grateful to everyone at NIH for working to contain the coronavirus, especially your team at the NIAID. Your interviews are articulate and informative - they give Americans some comfort and some concrete ways to think about protecting themselves and what to expect. It must be a stressful time and we want you to know that we have confidence in our NIH and CDC to contain it and to help stave it off globally as well.

On a happier note, I wanted to reach out and THANK YOU for all you do for our Down Syndrome research through the transformative trans-NIH INCLUDE program. It is making a HUGE difference!!

To this end, I am writing today in hopes you will be able to join us on Wednesday, May 20th for our AcceptAbility Gala at my head table. Attached is our save the date for the event. We are excited to have Caroline Cardenas as our 2020 Ambassador, Rep Pete Stauber as our keynote ([redacted] (b) (6)), and Reps Lucille Roybal-Allard and Jaime Herrera Beutler are Global's *Quincy Jones Exceptional Advocacy Awardees.* We believe the gala will be quite lovely and meaningful to so many.

We do understand that attendance cannot be considered if the coronavirus situation worsens. However, if things are looking much better (touch wood) we would be deeply honored if you and our friends from NIAID could attend. Looking forward to hearing from you soon.

All the Best, Michelle and family

Subject: Conference Planning with respect to coronavirus.

Dear Dr. Fauci

Dr. Miriam Kelty formerly of NIH referred me to you. I am on the board of directors and planning committee of the Applied Superconductivity Conference that is planned to be held in Tampa, Florida the last week of July. Over 50% of our expected 1500 attendees are from outside the continental US. Our planning committee appears to have three options:

1. Hold the conference on the original dates
2. Postpone the conference a few months
3. Cancel the conference

It would be most helpful to decision process if you can give us a prediction (anonymously of course) of how the effects of the virus will pan out.

I look forward to your reply.

> The severe complication of coronavirus are heavily skewed towards the elderly and those with underlying conditions (Heart disease, Chronic lung disease, kidney disease, diabetes, etc.) Most of the pneumonias are pure viral pneumonia and so this vaccination will not help that. However, on the chance that you have a pure viral pneumonia that gets secondarily complicated by a bacterial pneumonia (pneumococcal) the vaccine would be beneficial. If you are 65 years of age or older, you should get the pneumonvax23 vaccine anyway regardless of the risk of coronavirus infection.

Subject: A humble request for your wisdom

Good evening!

I know you must be completely busy and inundated with people wanting your time. I apologize that I have nothing to offer in return and completely understand if you don't have time to answer. I called the CDC but they were totally unhelpful. I have a question that makes sense to me and I was hoping you could answer and the answer might help a lot of people.

I understand that over time I, and everyone else, will very likely get COVID-19 and that most people won't even realize it because it will be minor. I get that, so this is not a panicked question.

I also understand that while most cases will not be severe, the bad cases are complicated by pneumonia.

So my question is: If someone has been vaccinated against pneumonia, will that offer any protection in the event that they do contract COVID-19 and perhaps provide some barrier against the worst effects?

Thank you for your time if you have read this and I apologize if this is just another in a long line of ignorant questions, but it made sense in my brain so I thought I would at least ask.

Be well, be happy, and may life be kind and generous to you, those you love, and those who love you!

sincerely,

Aliantha Angel

Subject: Coronavirus Question

Dear Dr. Fauci,
I apologize in advance for this email. I am *sure* you are too busy these days to answer coronavirus questions from the general public. However, you are the only individual I know of who can be trusted to speak intelligently about the pandemic.

I know there is no preventive vaccine or cure, and there probably won't be for quite some time--despite what our ersatz President says. But there is something I don't understand. Since the coronavirus causes pneumonia, wouldn't it be a good idea to vaccinate more of the general population with Pneumovax 23 or Prevnar 13? That certainly wouldn't prevent people from catching coronavirus, but perhaps the resulting penumonia onsets might be a little weaker/short-lived? [redacted] (b) (6) I figured it couldn't hurt, right?

Bravo for your efforts to keep our population intelligently informed on this situation.

Sincerely
Richard E. Silverman

Subject: Meeting to Assess Evaluation of COVID-19 vaccine candidates for risk of enhanced disease

Dear Doctor Fauci,

I am writing to you as a member of the SPEAC project which CEPI has funded to assist with the evaluation of the safety of vaccines in their portfolio. As part of this effort, we are assisting with developing preclinical and clinical testing criteria to evaluate the risk of enhanced disease following vaccination with COVID-19 vaccine candidates. As you know, this had been an issue with some prior SARS vaccine candidates.

We are convening a two day virtual meeting of experts via video conference next week on March 12 and 13 between 8 am and 1 pm Eastern time each day. Participants in the meeting are shown in the attached agenda but include Paul Henri Lambert from Geneva and Barney Graham from NIH. The meeting will actively involve the participants on the agenda the first day and on the second day the meeting will be open for several peer reviewers including Stanley Plotkin and Andy Pollard to review and comment on possible small and NHP animal models as well as appropriate immunologic testing to be done in early phase one trials.

I am wanted to make you aware of the meeting so that you could attend all or part as an observer if you wish but also to invite you to consider joining on day two as one of our formal peer reviewers. The goal of the meeting would be to share recommendations with CEPI COVID-19 developers as well as other interested parties.

Any comments you have on the agenda or draft questions for consideration would be greatly appreciated.

I look forward to hearing back from you.

> Dear Dr Anthony S Fauci,
>
> My name is Valeria Popova, I am the senior editor of Channel One (Russia). We would like to invite you to take part in the popular international Russian-American project on Channel One. The big game is a television program, within the framework of which two points of view on international events are presented: American and Russian.
> One of the presenters of the program is Dmitry Simes, chairman of the Nixon Center, a US citizen. He was foreign policy adviser to former US President Richard Nixon.
> Only high-ranking officials participate in this discussion: presidents, diplomats, heads of ministries.
> This is an honest and reasonable discussion. It would be a great honor for us if you joined her and discass with our experts about situation with coronavirus. We work live and can use teleconference or skype for communication.
>
> Hope to cooperate!
>
> Channel One is the broadcasting leader in the Russian Federation. 250 million viewers in Russia and abroad. Today, Channel One programs have the opportunity to watch 98.8% of Russians and more than 250 million people in the world.
>
> Channel One is the recognized leader of the Russian television, the most popular and favorite Russian-language channel in the world. It started broadcasting in April 1995

and became the successor to the state television and radio company Ostankino, which was the main broadcaster in the USSR and covered 99.8% of the population of Russia. Channel One's daily programs: the best entertainment shows, unique documentaries, latest news and analytics, the most headline movies and TV premieres, exclusive sports broadcasts and popular Russian music. Channel One combines innovative television broadcasting concepts, the vastest national traditions and cutting-edge global trends in a unique format.

Hope to cooperate!

Sincerely,
Valeria Popova

As promised, here is the big ticket item I wanted to flag for you. I was waiting to get through yesterday's hits to loop you in as to not overwhelm you. I have been speaking with the WH and VP's office to see if Dr. Fauci is available to join CNN this Thursday for our global town hall but wanted to make sure you have the info. Would you mind checking to see if he's avail?

Info:

We are reaching out to invite Dr. Fauci to join Anderson Cooper and Dr. Sanjay Gupta as our featured guest on the upcoming CNN special town hall - *Coronavirus: Facts and Fears.*

THE LATEST:

This Global Town Hall program will broadcast in front of a live audience from 10pm-Midnight EST on Thursday March 5 from the CNN studios in New York City. We would cover all expenses for someone from the task force to join us live in NY. If Dr. Fauci is unable to come to NY, we will take him remotely from DC.

Coronavirus: Facts and Fears will feature interviews with a wide range of front-line experts fighting to contain coronavirus, along with patients and others who have been directly impacted by it's spread. We're really hoping to include a voice from the administration in order to comfort and inform our worldwide audience.

Thoughts?

Thank you!

Subject: COVID-19 Webinar

Hello, Dr. Fauci,

My name is Donna Prosser, and I am the Chief Clinical Officer at the Patient Safety Movement Foundation. We are planning to host a webinar on Friday, March 6 at 8:00am PST to update our network on the coronavirus outbreak. Our network consists of 4,710 healthcare organizations across 46 countries, as well as patients, families, individual clinicians, and technology companies across the globe, who partner with us to achieve our goal of eliminating deaths from medical error.

During Friday's webinar, we plan to focus on how to keep patients safe from harm during this outbreak, and would love to have someone with your expertise join the call for a brief comment. Would you by any chance be available and willing to speak with our network sometime between 8-9am PST? We would be grateful for any amount of time that you could spare during that hour.

Thank you for your consideration!

Donna

Subject: How to put COVID-19 statistics in perspective

Today (March 3), CNN featured a discussion with NY Gov. Cuomo regarding a new COVID-19 case in NY City. He happened to note that there are currently about 15,000 patients in NY hospitals with the flu. Although multiple government agencies, scientists and health experts keep reminding us that there are far more cases, hospitalizations and deaths each year from influenza than this coronavirus, it strikes me that a more effective, more visual and less fear-producing way of presenting this information would be to present the current number of cases, hospitalizations and deaths from EACH of these diseases side by side. If the number of flu cases, hospitalizations and/or deaths isn't available on a daily basis, we could use extrapolations based on known rates. I think this would certainly go a long way to putting the relative risks of these diseases in clearer focus.

Subject: Idea to help with Coronavirus infection

Dr. Fauci,
I first want to thank you for your service and efforts in combating this international health problem.

I'm neither a physician or a scientist so please accept my apology if my idea is simplistic or isn't feasible. But I was thinking about some of the information presented on why it seems to be less prevalent in children. One theory is that they are exposed to so many other coronavirus's that they experience cross-protection. So I was wondering if anyone had investigated the idea to flood adults with other, less lethal, coronavirus's as a way to develop some level of immunity? Ideally coronavirus's that are a match to what children would be exposed to is what I'm suggesting here. I wouldn't expect that this will totally protect an adult but it might reduce the severity of the illness if an adult becomes ill and help while a vaccine and treatments are launched.

Thank you for considering this idea.

Best,
Jeff

Importance: High

Dear Dr. Fauci -

Thank you for helping millions of people with your research over the years.

The following information was culled from http://poleshift.ning.com.

Perhaps this article may help you and your colleagues develop a vaccine that may combat the Corona Virus. You were the first one I thought of who may be able to deem its worth and explore its research for practical purposes.
Some of the links have included nih.gov so maybe your colleagues have already read this.
With my limited medical knowledge, I have taken the liberty to highlight key points that seem important.

Wishing you and yours all the best for remaining healthy in Mind, Body & Spirit.

Warm Regards & Appreciation,

Liz Jan

Dear Dr. Fauci,

Thank you for your useful editorial published in NEJM last week, it helps confirming that the situation does not need to be as glim as the panic that most people are experiencing.
I am writing an editorial and hoping to submit it to The Lancet soon. Differently from NIH/US Government institutes, I have more room for reflection in my viewpoint.

For that reason, I was wondering if I can have a call with you to get your opinion/advice on the direction of my editorial. I know how busy you are and I can understand if you do not have the time, but if by chance you are willing to have this call, I'll be happy to share my editorial's draft first.
As a background, I am an EIS graduate (class of 2009), and trained by Robert T. Chen.

Thanks,
Charbel El Bcheraoui, PhD, MSc

Subject: Zinc gluconate by inhalation for early coronavirus in elderly?

Dr Fauci,

Since the elderly's response to pulmonary coronavirus infection may be impaired, especially in those with a chronic disorder, is there any information re: delivering by inhalation, low concentrations of a Zinc salt. Is there a potential rationale in early coronavirus infection to try to minimize serious pneumonia, were such inhalation shown to be reasonably safe?

Thank you,

Arthur Bobrove, MD

Subject: Coronavirus: Six Eyed Sand Spider, Habanero, water, Qi

Dr. Fauci,

[redacted] (b) (6). I am an author on a Chinese form of healing called Qigong (a field I have studied for over 30 years), and am exploring Coronavirus from the perspective of a combination of the venom of the Vietnamese Six Eyed Sand Spider (entering the cells externally), Habanero capsaicin entering cells internally, the elevated water levels of infants and children and their higher levels of Qi in relation to them not getting the disease, and Qi from Traditional Chinese Medicine, Acupuncture, and Qigong.

I believe that the above combination can be beneficial in the study of Coronavirus. I am sure you are extremely busy and I am but a simple author but I just wanted to try to touch bases in case the above might help.

I live in [redacted] (b) (6).

I would be truly honored to hear from you.

Lily of the Valley Carnie

Subject: Possible treatment of COVID-19 pneumonia

Dear Dr. Fauci,

Nitric Oxide (NO) has been shown to contribute to the pathogenesis of influenza virus-induced pneumonia in mouse model (Zablockiene et al., 2012).

Zablockiene B, Ambrozaitis A, Kacergius T, Gravenstein S. Implication of nitric oxide in the pathogenesis of influenza virus infection. Biologija 2012; 58(1): 15-25.

NO overproduction in influenza virus pneumonia results from a sustained stimulation of inducible Nitric Oxide Synthase (iNOS) (Akaike et al., 1996).

Akaike T, Noguchi Y, Ijiri S, Setoguchi K, Suga M, Zheng YM, Dietzschold B, Maeda H. Pathogenesis of influenza virus-induced pneumonia: involvement of both nitric oxide and oxygen radicals. Proc Natl Acad Sci U S A. 1996 Mar 19; 93(6):2448-53.

NO overproduction in influenza virus-induced pneumonia can generate highly reactive oxygen species, peroxynitrite, via radical coupling reaction of NO with superoxide [resulting from influenza virus-induced increased levels of xanthine oxidase (XO) (Maeda and Akaike, 1998).

Maeda H, Akaike T. Nitric oxide and oxygen radicals in infection, inflammation, and cancer. Biochemistry (Mosc). 1998 Jul; 63(7):854-65

Peroxynitrite causes oxidative tissue injury through potent oxidation and nitration reactions of various biomolecules (Akaike and Maeda, 2000).

Akaike T, Maeda H. Nitric oxide and virus infection. Immunology. 2000 Nov; 101(3):300-8.

The crucial role of NO in influenza virus-induced pneumonia was demonstrated on iNOS gene knockout mice: at inocula sufficient to cause consolidating pneumonia and death in the wild-type control mice, iNOS gene deficient mice survived with little histopathologic evidence of pneumonia (Karupiah et al., 1998).

Karupiah G, Chen JH, Mahalingam S, Nathan CF, MacMicking JD. Rapid interferon gamma-dependent clearance of influenza A virus and protection from consolidating pneumonitis in nitric oxide synthase 2-deficient mice. J Exp Med. 1998 Oct 19; 188(8):1541-6.

Both influenza and coronaviruses could have the same pathogenetic mechanism of inducing pneumonia, namely harmful overproduction NO.

I would like to present you my innovative idea: Suppressing NO overproduction in COVID-19 complicated to pneumonia with Methylene Blue (MB)

Arguments pro:

MB is known as a guanylate/guanylyl cyclase inhibitor but it is mainly a NOS inhibitor (nNOS and iNOS).

MB is an inhibitor of superoxide generation by xanthine oxidase and NADH/NADPH oxidases.

MB is a small molecule capable to penetrate in tissues and cells

MB was administered intravenously in patients with refractory septic shock and Hepatopulmonary Syndrome of advanced liver cirrhosis.

MB administered intravenously will definitively reach the cells where NOS is induced by COVID-19 complicated by pneumonia both in animals and humans:

-Airway epithelium (including alveolar epithelial cells);

-Alveolar macrophages;

-Capillary/vascular endothelium (endothelial cells).

MB is an inexpensive medication.

MB is non-toxic molecule in humans

There are only a few cases of MB toxicity published in the literature. These cases occurred in very peculiar situations:

Hemolytic anemia in patients with G6-PD deficiency

Severe neuropathology after intrathecal administration of MB

Eye injury after topical use of MB

Tissue necrosis due to the extravasation of injected MB

Jejunal atresia following intra-amniotic MB

Serotonin reuptake inhibitors (SRI's) interact with MB, causing a serious adverse reaction consistent with serotonin syndrome.

Very truly yours,

Paul Tone, MD, PhD

Subject: Dr. Fauci. I have a possible reason children are immune to the coronavirus. Please read

Hello Dr. Fauci. I am a (b) (6) pharmacist from Ontario, Canada. I was just reading an article that stated covid-19 cases in children under nine y.o. are almost non-existant. I wondered why, and then an answer dawned on me. They have an immunity because one of the childhood vaccines all children get is giving them cross immunity to coronavirus as well. A study should be done immediately to see which one gives cross immunity, if indeed that is the reason for their seeming immunity to this virus. The immunity must wear off over time which is why adults and seniors seem to lack prior immunity and get sick. This hypothesis is certainly worth investigating. If this is what is happening, maybe millions of lives could be saved by a simple booster of an existing vaccine. Please let me know your thoughts on this matter. Thanks for your time. Rob

Hello Dr Fauci,

Hope you're well. I'm a producer for Sky News, looking after our flagship evening programme Sky News Tonight 7-10pm UK time (2-5pm ET).

I was wondering if you might be available for an interview on the coronavirus outbreak? Either today or another day this week.

Happy to explain in more detail.

Any questions, please let me know.

Best,
Jakub

Subject: Can we get comment please?

Folks, we're doing a story that focuses in part on the administration's conference call from last Thursday noon about a decision to send out more CDC coronavirus assays despite the fact that they had become contaminated and compromised. We understand that Dr. Fauci was one of four federal doctors (the others being Drs. Hahn, Shuren and Shah) who strongly recommended the assays not be sent out.
I want to give Dr. Fauci a chance, on or off the record, to comment on the story please.
Thank you,
Tom Burton

Subject: Questions from Sen. Alexander

Hi Laura and team,

Thanks for all your work in advance of tomorrow's HELP hearing. Below are specific questions that Sen. Alexander plans to ask Dr. Fauci and would greatly appreciate concise answers to – he is happy to allow Dr. Fauci to elaborate if there is additional time. Additionally, he plans to ask Dr. Schuchat a few questions about CDC covering patient costs from quarantine.

Thank you very much and look forward to seeing you all or your colleagues tomorrow.

Best,
HELP team

Questions for Dr. Fauci:

1. How many cases are there in the world? In the U.S.?
2. How many deaths so far in the world? In the U.S.?
3. How many countries have cases of the coronavirus?
4. How do you know if you have the coronavirus?
5. What are the symptoms?
6. How do you protect yourself?
7. Should we all be wearing masks?
8. If not, why should health care workers have to wear masks?
9. What are the most effective ways to protect your families?
10. If someone has coronavirus symptoms, what should they do?

11. If a doctor has a patient with these symptoms, what should they do?

12. Who is most at risk?

13. What is the mortality rate?

14. Can you explain why there have been relatively few reports of cases in children?

15. This is the peak of the flu season –
    a. How many flu cases have we had this year so far?
    b. How many deaths have we had this year from the flu?
    c. How is the coronavirus different from the seasonal flu?
    d. Is it possible that we could reduce the infections or deaths from the seasonal flu because you need to do the same things to protect yourself for both types of viruses?

16. Can a person transmit the virus even if they are not showing symptoms?

17. Are your agencies doing any research to determine when exactly an individual may transmit the virus to others?

QUESTION FOR DR. SCHUCHAT:

- If a patient is under a federal government-required quarantine, who pays the bills?

- Does their insurance pay first, and then does the CDC cover the remaining bills as the payer of last resort?

- If CDC is the payer of last resort, does the agency pay the doctor or the hospital directly – or is the patient obligated to send their bills to the CDC?

- How and when is this information made available to the patients under a federal government-required quarantine?

Subject: Re: Q

This is the descriptive portion of my column. I don't want to over or under-state:

America is entering a disturbing new stage in the coronavirus outbreak. There has been community spread in at least one and likely two locations in Washington State. And it appears the virus was being transmitted for at least a few weeks before current cases were recognized. So we can expect dozens or hundreds of cases in those locations unless contact tracing is especially efficient.

That means the disease is loose and easily transmitted.

The crucial issue now is the real mortality rate, which remains uncertain. The stated mortality is 2 percent. American experts are hoping the rate turns out to be considerably lower. But the math remains troubling in any case. If only 5 percent of the population eventually gets infected (which is on the low side of some estimates) and the mortality rate is 1 percent, there still would be a few hundred thousand deaths.

At this stage, the main tool that public health experts have is social distancing – the attempt to keep as many people as possible in affected areas out of sneezing distance from one another. This means measures such as closing schools, cancelling events in theaters and stadiums and encouraging employees to telework. States and localities ultimately make such decisions rather than the federal government. But according to some health experts I consulted, Washington State should be taking such measures right now. The effectiveness of social distancing is limited when action comes too late or ends too early.

The goal of such policies is to keep the R0 (reproduction ratio) as low as possible. When people are in close proximity, a single infected person can spread the disease to several others, boosting the R0 of the disease as high as 2 to 3 and causing an exponential increase in cases. If the R0 is less than one, the epidemic will gradually decline and stop on its own, with or without a vaccine.

A vaccine, however, would be tremendously helpful. There are at least ten vaccine development projects underway. But the one furthest along at the National Institutes of Health (NIH) is still about six weeks away from starting the process of **a** phase 1 **trial in human volunteers that will take 3 to 4 months to complete and to show that the vaccine safe and produces specific antibodies. A** phase 2 trial **will follow and will take at least 6 to 8 months to determine if the vaccine is efficacious in people at risk for infection**. Then production would need to be scaled up by a willing pharmaceutical company to deal with a global crisis. All this **in total will** take at least a year – assuming there are no unpredicted scientific obstacles in the way.

On Mar 2, 2020, at 7:54 AM, Fauci, Anthony (NIH/NIAID) [E] <[redacted] (b) (6)> wrote:

Mike:

Social distancing is not really geared to wait for a vaccine. The major point is to prevent easy spread of infections in schools (closing them), crowded events such as theaters, stadiums (cancel events), work places (do teleworking where possible). States and localities make these decisions, not the Federal government. The goal of social distancing is to prevent a single person who is infected to readily spread to several others, which is facilitated by close contact in crowds. Close proximity of people will keep the R0 higher than 1 and even as high as 2 to 3. If we can get the R0 to less than 1, the epidemic will gradually decline and stop on its own without a vaccine.

Is the overall strategy for social distancing just to keep the percentage of Americans who get the disease low until a vaccine is available? This seems much harder to do in a free society. Does this mean closing schools? Public transport? Do states and localities make such decisions?

> Thanks for the note. We are clearly getting "community spread" in at least one and likely two non-contiguous locations. It was likely spreading in Washington State for at least a few weeks before the current cases were recognized, which means we can expect dozens and dozens of cases (or more) in that location unless we are vey lucky and/or the contact tracing is highly efficient. The precise mortality rate is still uncertain. The stated

mortality is 2%; however, even if it is half that (1%) and only 5% of the population get infected, you are correct in that we can have a few hundred thousand deaths. The really critical issue is what the mortality rate actually turns out to be. I am hoping for a considerably lower mortality rate, but that might be wishful thinking. Whatever it turns out to be, the major tools that we have are public health measures, particularly social distancing, which we have to start doing right now in Washington State and thinking about in other locations. That is really the major weapon that we have. Even though we go into phase 1 with one candidate vaccien in about 6 weeks, vaccine is out of the question for at least a year or more if you want to make sure that you have an effective vaccine, i.e. some efficacy data before massive deployment. We are meeting with pharmaceutical executive today and I will bring up the issue of what the fastest possible timeline would be to have a deployable vaccine.

[redacted] (b) (6)

[redacted]. I hope that you are well.

Best regards,
Tony

Subject: Q

Tony,

I was with Francis yesterday, and the news seemed pretty sobering. It seems like the virus is out in the general population in the Pacific Northwest and Silicon Valley. A pandemic now appears likely. Francis gave me a guesstimate that 5 to 20 percent of the US population may end up infected. Depending on the mortality rate, this could result in hundreds of thousands of deaths.

Not for attribution in any way, is this a fair summary? How and when will we know if the disease is on this track? Do we have any better info on mortality yet?

And is there any news on the vaccine front? As I understand it, we are not even to Phase 1 trials on anything. If a vaccine is promising, are well talking about late Fall as the earliest possibility? And are there any substantive measures that could be taken to make sure pharma steps up to produce a vaccine on a massive scale once we have It?

I'm not sure Americans have been adequately prepared for this possibility. That is partly a political problem (in my view). But what needs to happen soon to get people prepared?

Hope you are holding up well under all of this and taking care of yourself.

Mike

Subject: Re: Is this true?

I have been very explicit in stating publicly that I am not being muzzled or censored. I say exactly what I want to say based on scientific evidence, I have stated this on multiple TV programs over the past few days including at a major press conference with many, many reporters present including several TV cameras. I could not possibly be more public about this. No censor. No muzzle. Free to speak out.

> On Mar 2, 2020, at 9:11 AM, Shlomchik, Mark Jay <MSHLOMCH@pitt.edu>wrote:
>
> OK, well that is good to know. It has been reported by many outlets including the NYT. So if not true I think it is critically important for you to say so publicly and show that it is not the case. It is critical, critical that we all have faith in the science and medical leadership. Your personal integrity is at stake here in the community and the world, and is a proxy for the integrity of science and medicine.
> According to one house member, the following:
>
> Garamendi told MSNBC's Hallie Jackson that Anthony Fauci was scheduled to do all five major Sunday talk shows, but says Fauci canceled the appearances after Vice President Pence took over the administration's response to the disease.
>
> Trump on Wednesday named Pence as the official overseeing the government's response.
>
> "I can repeat what he said, he said, 'I was not muzzled. However, I was to go on the Sunday talk shows five of them. The vice president's office then took over the control of this situation, and told me to stand down, not to do those shows,'" Garamendi said, quoting Fauci.
>
> We cannot mince words about this or have nuances. If you were told not to appear on Sunday talk shows, then a reasonable person would have to assume your speech indeed is being controlled. Whether you call it "muzzled" or censored is a matter of semantics. Is it factual that you were told/asked not to appear on these shows as had been scheduled?

I hope you understand my reason for and level of concern. I am certain it is shared by many of your colleagues and citizens.
Best,
Mark

MESSAGE ON BEHALF OF THE GPMB CO-CHAIRS DR BRUNDTLAND AND MR SY

Dear Board members,

Thank you to those of you who joined the call on Thursday on short notice.

In light of our discussion, we would like to update you on a few matters:

[redacted] (b) (4)

- **Coronavirus outbreak.** We have asked Jeremy Farrar to act as the Board's focal point on the COVID-19 outbreak, to represent and advise the Board on the science of the outbreak and the financing of the response. We thank Jeremy for agreeing to take on this role.

- **Follow-up Board teleconference call.** Since many of you were unable to attend Thursday's call, we wish to propose to hold a follow-up Board teleconference call on **4 March at 14:00 Geneva time**. The purpose of the call will be to discuss the coronavirus outbreak, including Jeremy's proposal for Board action on financing. We would appreciate if you could confirm your participation to Amélie Rioux [redacted] (b) (6)). A more detailed agenda and call-in details will be shared shortly.

- **In-person Board meeting.** We wish to confirm that the next in-person Board meeting will take place **Tuesday-Wednesday, 5-6 May 2020, in Geneva**. The meeting will be an important opportunity to further discuss strategic issues as well as a draft of the annual report. We will communicate further on logistical details.

As always, thank you for your support and continued engagement.

With kind regards,

Gro and As

> Dear Dr. Fauci (and Hilary, if you end up doing this event as ASF's back-up),

I've attached an "event rundown" for the Harvard Forum Webcast, which is scheduled from 11:40-1pm on Monday 3/2—a moderated panel discussion. This is a document prepared by the event organizers outlining the run of show, noting what questions the moderator will pose, and some suggested points the organizers thought you might touch on in your answers.

Although the organizers prepared this document following a planning call, they have made it clear that the "talking points" in this document are of course not a script. I have taken their document and highlighted where you appear. I have also added some comments. Let me know what you think. There are no slides for this event.

Let me know if you would like to discuss further over the weekend or if you'd like anything for preparation.

Sincerely,

Andrea

Subject: personal Immune baseline and its impact on infection and vaccine responses

Dear Dr. Fauci,

Hope you are doing well despite the rapidly evolving situation with COVID-19.

I wanted to send you a paper we just published last week that you might find relevant – please find attached and a NIAID piece below.

https://www.niaid.nih.gov/news-events/immune-system-status-predicts-future-responses

This paper asks the question of why do individuals mount variable immune responses to vaccines, infections, and diseases. This extends from our earlier work on baseline predictors of influenza vaccination responses that you highlighted as a NIAID Advance in 2014. A key message is that genetics is often unlikely the answer, but the status of the immune system before the perturbation may offer clues – here we identified such an immune cell circuit involving pDCs-Type I IFNs prior to perturbation in humans and found that its status can predict vaccination and lupus disease activities and is temporally stable within individuals for months.

[redacted] (b) (5)

Many thanks!

Best wishes,
John.

Subject: Outreach from STAT

Tony,

I know you're swamped but I'm wondering if we could arrange for you this week to take questions from our readers about coronavirus. All of our coronavirus coverage is in front of STAT's paywall and we'd see your contribution as an enormous public service.

We would solicit questions for a "live chat" from readers -- and you could pick and choose which ones you want to answer -- and write most of them in advance.

Among other leading figures, we've done this format twice with Nobel winners and it's quite popular. https://www.statnews.com/events/stat-live-chat-chat-with-a-2019-nobel-winning-scientist/

With Helen Branswell, Sharon Begley, Matt Herper, and our whole team, we pride ourselves on covering the coronavirus in the most authoritative and fair-minded way. We've developed a tremendous audience for this coverage. https://www.statnews.com/tag/coronavirus/

Our readers are fairly sophisticated on health and medicine, and we're looking to focus on the health aspects, not the White House politics.

In addition, I'd be grateful if you'd consider writing another First Opinion for us, maybe on lessons you've learned regarding other outbreaks and how that might be relevant with coronavirus -- or whatever you'd like.

Your voice of course is very important and authoritative and we'd be grateful to have it again in STAT.

All best,

Rick

Subject: question from BRT

Dr. Fauci,

I hope you are well.

Last February, I moved to Business Roundtable, which represents CEOs of large U.S. companies. Josh is the BRT CEO, and it's been great to work with him again.

We wanted to check with you on something quickly. Traditionally, BRT has not weighed in on global health security policy, but COVID-19 has served as a reminder that global companies need to be strong advocates for global public health and security. If you had your choice, what would you want to see our companies advocating for, specifically?

No worries at all if you don't have time to respond. We fully appreciate how important your time is.

Best,

Kristen

Subject: ARB therapy in Covid-19 infection

Thank you for responding to my email yesterday about the possibility of ARB therapy in treatment of coronavirus infection. I realize that your research is ongoing. Would you anticipate, however, that the ARB with the most potential role in preventing virus attachment would be the one that has the greatest affinity for the AT2 receptor? Am i correct that losartan is the ARB with the lower receptor (AT1 vs AT2) selectivity and might logically be the most promising ARB to investigate? Thanks. Dr Thomas Leopold

Dear Dr Fauci,

I heard this idea on a radio interview with Laurie Garrett this morning – how about getting your committee (or one of the government health agencies) to produce a series of short YouTube videos on how to combat the coronavirus: such things as proper handwashing technique, when to wear a mask, how to ride the subway safely, etc, etc. I think this would be an excellent way to reach the public in the digital age (provided that Mike Pence doesn't try to turn them into campaign ads for Donald Trump), and I strongly urge you to give the strategy serious consideration. I know I would watch them and I'm sure millions of other people would too.

Sincerely,

Paul Hanke

Subject: Report from 'HHS COVID-19 Situation Update' call today

Passing on some main points from of an "HHS COVID-19 Situation Update" call that took place at 3pm today, FYI.

- The meat of the call was a situation update by Nancy Messonnier (with epi numbers below).
- She noted that the national strategy is still containment.
- However, since there are some US locales with evidence of community spread, there is consideration if some "community level action" may be appropriate, with a move towards a blend of mitigation/containment in certain areas.

Global epi update:
China lab/clinically confirmed cases: 79,824 (+573 in last 24h)
China deaths: 2,870

61 international locations with 7,102 cases so far (Armenia, Ecuador, Ireland, Luxembourg new in last 24h)

107 international deaths

Widespread community transmission occurring in:
China, Iran, Italy, Japan, S. Korea

US epi update:
63 confirmed US cases (16 diagnosed here, 3 in Hubei repatriates, 44 in Diamond princess repatriates)
11 presumptive cases (meaning they tested + at state public health labs, but confirmatory test at CDC is pending)
663 Persons Under Investigation

Subject: SARS-CoV-19

Although outside my main area of expertise I have been keeping up with CoVid-19 discussion. One item I have noted is that the disease appears to have a lower incidence in children. The other is that the virus appears to at least in part attach through cell membrane angiotensin II type 1 receptors. Is the lower incidence of the disease in children possibly due to this cohort having a higher proportion of angiotensin II type 2 receptors compared to the adult cohort?

Subject: Invitation to speak to the National Economists Club

Dear Dr. Fauci,

My name is Emily Sanchez and I am an economist at the American Chemistry Council. I am reaching out to you in my capacity as President of the National Economists Club (NEC), which is an organization of over 1000 government and private sector economists based in DC. The NEC holds weekly luncheon events which feature notable experts and economists in Washington.

Increasingly, economists are being asked to assess the economic impacts around the incidence and spread of the corona virus as well as the impact of reduced economic activity due to behavioral changes (e.g. people not leaving their homes to work or shop, supply chain disruptions, etc.). As economists are tasked in assessments, scenario planning and communicating their estimates, accuracy around their assumptions and understanding of the corona virus and Covid-19 is imperative. We are incredibly appreciate of the important work and research that the National Institute of Allergy and Infectious Diseases provides and we are wondering if you would be willing to speak at one of our luncheons about Covid-19 and the latest developments.

Do you think you might have time in your schedule to speak to the National Economist Club this month? We would love to have you speak during the week of March 16-20.

Our luncheons typically take place at the Chinatown Garden Restaurant, 618 H St. NW, with lunch at noon and your presentation from 12:30 p.m. til 1:30 p.m. Talks are normally on the record and open to the press, unless you request otherwise.

Thank you for your consideration.

Best regards,

Emily

Subject: Have you been muzzled?

Reference: I'm the nuclear/aerospace engineer who subsequently obtained an MPH at the University of Washington since I was working disease transmission within commercial airlines when I was a Boeing employee. And, my undergraduate degree is in chemistry with a minor in microbiology. I've engaged you previously.

Hi Dr. Fauci,

You've kindly allowed me to engage you, and I'll take advantage of that kindness.

The news media is reporting that the White House has muzzled you. Is that true? Before entering the science/engineering world, I was a newspaper city editor in Southern CA (in the 1970s). Therefore, I get and understand the idea of coordinated messaging. (Plus, due to my media background, Boeing used me to help executives prepare for media engagements on challenging topics.) However, if it's true that you are muzzled, then I will initiate a "campaign" with my congressional representatives and the media to stop that action. ([redacted] (b) (6)

However, ***before I initiate such a campaign, will my actions possibly cause you harm?*** I recognize that you may have backchannels that I may disrupt by engaging.

As I related previously, I trust you since you focus on facts and data, you provide context for the information that you share, and you avoid emotion in your engagements. I think that residents of the US (and, frankly the world) need your insights regarding COVID-19. Plus, you're one of the world leaders with regard to infectious diseases. And, if you don't know, you know whom to ask.

Please let me know if I should stay silent or become noisy.

Thank you. And, thanks for your service to the US and the world during this very interesting time.

Thomas Murray

Subject: News about SARS-CoV-2 ad Covid-19

Dear Dr. Fauci,

It would be good to know if you still believe Americans can trust CDC's public-facing authority or whether we'd best look to WHO for reliable information about the virus, the disease and any new mutations which might arise. Mike Pence does not have appropriate credentials.

Sincerely,

D.A. Sonneborn, Ph.D.

Subject: Fc modifications for protective anti-COVID-19 antibodies

Dear Tony,

I wanted to share a very recent and surprising result we've obtained on the mechanism of antibody protection for anti-viral antibodies. We've previously shown that bNAbs to flu and HIV require FcR engagement for their in vivo potency. Enhancing activating FcR engagement increases the potency of these antibodies by an order of magnitude, on average, and thus are significant contributors to anti-viral protection.

(b) (4)

[redacted]

We'll be writing up this story shortly and would be happy to share a pre-print with you.

Sincerely,

Jeff

Subject: Novel Treatment for Reducing Symptoms Associated with Coronavirus (COVID-19) - "Non-Confidential"

Dear Dr. Fauci,

Sen-Jam Pharmaceutical has a product under development to reduce the symptoms associated with Upper Respiratory Infection (URI). We believe it could provide relief to a large number of people during the COVID-19 pandemic. Our product SJP-002 is a combination of an NSAID and a non-sedating antihistamine and does not include a decongestant. Removing the decongestant makes our product ideal for treating the symptoms associated with COVID-19 in patients with cardiac conditions who cannot tolerate taking a decongestant.

What makes our product novel is that it can be administered early in the treatment phase, thereby reducing the excessive accumulation of inflammation, which typically results in head congestion, pulmonary congestion, coughing, & sneezing. Our experience has shown that at the 1st signs of experiencing symptoms of URI an individual's symptoms can be drastically reduced after taking our product twice a day for 3 days. The dramatic reduction in inflammation has the potential to reduce the spreading of the virus by means of cough, sneezing, and spreading of germs through contact. Currently, when individuals experience the start of a URI, there is little effective intervention available to change the course of the infection. Individuals delay administering pharmaceutical agents, until their congestion becomes intolerable and excessive.

Attached is a copy of our early research and a copy of our non-provisional patent. I share this information with the hope of providing some background for an immediately accessible, safe treatment, alternative to slow the pace and impact of the pandemic.

Let me now if we can be of any additional help?

Thanks and all the best,

Jim

Subject: Info re Covid-19

Dear Dr. Fauci,
Those of us who seek factual, scientifically-based information to the highest degree that it is possible to obtain it will remain hungry and on the alert for whatever complete, up-to-the-moment information that you may have as humanity proceeds deeper into the Covid-19 potential pandemic. We have trusted you through several previous epidemics to provide such information. Therefore, I know I'm not alone in being appalled and frightened by President Trump wanting you to issue information about the current crises only after it has been cleared by his administration. In his office as President, Donald Trump may be *de facto*, Commander-in Chief. There is nothing about his office that confers Expert-in-Chief on him, and what he chooses to say or not say about Covid-19 and its spread should not be treated by the media or anyone as information that is trustworthy for being factual and scientifically-based information to the highest degree that it is possible to obtain.

I hope that you will find it in yourself and in the mission of your office to publicly assure the American public in no uncertain terms that you will not be censored, and that you will honor the public's trust to continue to provide real, research-based information about the frightening health nightmare that all humans are facing in a way that distinguishes us from China's government in its disgraceful and destructive efforts to muzzle those experts who might be able to save lives by merely speaking truth to a population whose health depends on having fact-based, totally un-massaged knowledge as soon as it is available.

It is with our lives, the lives of our families, and the lives that make up our nation that we are counting on you.

Sincerely yours,
Lawrence O. Brown, Ph.D.

> Thanks for the note. I hope that all is well with you. I have never been given orders to get approval from the VP's people to speak publicly about coronavirus. Ever since I have been doing this since the Reagan administration, whenever a member of the Executive Branch such as me gets invited and goes on National TV such as the Sunday Talk shows, there is always a routine process of clearing it with your department (in this case HHS) who then clears it with the White House. This is routine and has been true for the Reagan, Bush '41, Clinton, Bush'43, Obama, and now the Trump administration. It is merely a formality so that they know what is coming out from the executive branch. I have always gotten clearance with very few exceptions over the past 35 years (usually because they do not want you on TV at the same time that the President is making an important announcement). I have never been muzzled or told that I could not speak out publicly about anything during this administration.

Tony – sending you an email to say thanks for your steady hand at the helm in this current challenge with Coronavirus. You are such an essential part of our government's response to this public health challenge.

Please let us know if there's anything we can do at CAP to assist. We plan on hosting an event next week and I'll send you details as they come together.

Again, thank you.

Tony –

Thank you so much for participating in CAP's podcast, Thinking CAP earlier this month. We think the interview turned out very well and hope you think so, too.

Have a good rest of the month and Labor Day and I hope our paths cross again soon – either in the neighborhood or at work.

Winnie

Daniella sits down with renowned immunologist Dr. Anthony Fauci to discuss how the United States has and can continue to combat the HIV/AIDS epidemic, both domestically and abroad.

https://www.americanprogress.org/issues/healthcare/news/2019/08/15/473666/dr-anthony-fauci-global-fight-hivaids/

For decades, the HIV/AIDS epidemic has been among the most challenging global health issues to contain. Enter Dr. Anthony Fauci, immunologist and director of the National Institute of Allergy and Infectious Diseases at the National Institutes of Health. As one of the foremost experts and advocates against the HIV/AIDS epidemic, Dr. Fauci exuded optimism when talking about the progress being made in both global and domestic containment of the disease. He sat down with Daniella for an interview to discuss his work fighting HIV/AIDS and to share his thoughts on the growing, dangerous anti-vaccination movement.

Learn more about the podcast here.

Daniella Gibbs Léger is the executive vice president for Communications and Strategy at the Center for American Progress. Ed Chung is the vice president for Criminal Justice Reform at the Center. Kyle Epstein is the media relations manager at the Center. Chris Ford is the broadcast coordinator at the Center.

Tony,

Watching the spread of the Coronavirus worldwide(?), I can't help but feel for you, as well as the world's population.

It must be both challenging as well frustrating to be unable to control every important "leak" and then watching the consequences.

I would think it's also sort of exciting, while also being horrible, given this is what you've trained for most of your professional life.
And, I would think that most of your other important works need to be put on hold?

Wishing you (and all of us) the best of luck,

Howard

Hello Dr Fauci: Hope you're holding up well. Remember to rest and hydrate!

We had a DHS person tell us epidemiology models for US show worst case scenario 98m get COVID-19 and 500k dead.

I've seen models all over the board. And Dr Jen and I are keeping our coverage on point on what we know and what we don't know.

If that a possible number for our planning? Or is that outlandish?

Thx.

Subject: coronavirus

William H. Sherman, M.D.
(b) (6) [redacted]

Anthony Fauci, M.D.
[redacted] (b) (6)

Dear Dr. Fauci:

I reviewed the publications about the last 2 coronavirus infections. Both MERS and SARS were severe, short lived problems that have not recurred. One would expect Covir-19 to follow a similar path: infect a wide group of susceptible people and then disappear, If that is so, anything that is more than six months away may not be of value—remdisivir or a vaccine. Even if remdisivir works, it will take months to produce sufficient amounts to treat this illness.

Has ribavirin been assessed for an ability to slow down the replication of this virus? We do not need to eradicate the virus. Just slowing down the rate of symptoms progression would allow time for the immune system to mount a curative response.

Ribivirin is the only approved anti-viral that may have shown some clinical benefit against similar coronavirus infections, but the reports are anecdotal and the benefit short term. It was only administered to a few patients who were already on respirator support, and most still died. If their lungs were already destroyed, eliminating the virus would not change the outcome. There were no studies of treating mild illnesses before they progressed to needing respirator support. If the 50 year old coronavirus patient described in the Lancet had been treated in first week of symptoms, before needing respiratory support, he may have survived. On autopsy, most of his lung had been destroyed.

If ribavirin has even marginal benefit, decreasing hospitalization by 10% yields an enormous savings. I do not have access to the data on this virus and the possible effects of the antivirals that have been evaluated. However, ribavirin has any effect on viral proliferation, we can write and a randomized trial of ribavirin, [redacted] (b) (4)

(b) (4) [redacted]

I look forward to hearing from you about the data on ribavirin against this virus and your thought on this clinical study.
Sincerely,
William H. Sherman, M.D.

Dr. Fauci,

Greetings from the Brookings Institution. I'm writing to share the attached invitation for you to speak to our Board of Trustees at their annual dinner on Thursday, March 5 here in Washington, DC. The Brookings Board is a distinguished group of business and community leaders … I know they would be very eager to hear your thoughts, especially on the coronavirus crisis given its spread into the U.S. If this date does not work with your schedule, we'd be glad to welcome you to Brookings at a more convenient time.

I very much appreciate you considering our request, Dr. Fauci!

My very best,

John R. Allen
President
The Brookings Institution

Subject: COVID-19

Dear Dr. Fauci,

I'll not be at the CROI this year [redacted] (b) (6) So I hope I may be able to ask you a few questions as a concerned citizen.

Will we learn:
Why there are new cases in the US of unknown origin?
Could this virus infect carriers who do not present with symptoms or present in various levels of very mild infection and never get identified as infected?
Could individuals host the virus differently due to genetics or ethnicity?
Is this virus consistently similar after multiple generation or is it capable of mutating?
Is there an ability to develop an antibody immunity through infection? Can one be reinfected?
Could the level of infection be determined by the amount of inoculant?
Could we learn the level of infect ability of this virus by testing everyone in a given geographic area where there is a deep outbreak? We might also learn about the pathogenesis in a way that we cannot learn otherwise.
If this virus is so transmissible could we end up with almost everyone eventually being infected and present with various levels of serious acute infection and death to indistinguishable cases or just carriers?

With the clamp/filter on information from this administration, please tell us where we may find regular reports at various levels of current science on what we learn about this virus and vaccine progress, and where we may ask questions? I hope there is place for formal and informal community input into treatment, care and vaccine development.

Thank you for all your help over the years with your wise perspective through our interviews and leadership at the

NIH in such a reasonable and responsible way.

Warm regards,

Fred

Subject: Coronavirus - New Idea for treatment & clinical study
Importance: High

Dear Vice President Pence,

We are thankful for your leadership of the White House Coronavirus Task Force in gathering the latest information about the outbreak, working with doctors and scientists to find solutions, and communicating with the general public regarding the situation. We were blessed to meet with you back in August, 2019, when [redacted] (b) (6) had expressed a desire to meet you. I have attached a picture from our meeting to help you remember. We pray for you often.

Since we are both physicians, we have been following the details of the COVID-19 outbreak closely. My husband was researching the anti-viral drug remdesivir this morning, and he came across some articles from Chinese studies that indicated a very well-known drug called hydroxychloroquine (already widely used for 70 years to treat malaria and rheumatological diseases) had very potent activity against COVID-19 infection and pneumonia. This was rather surprising to us, but as we read about the study and the characteristics of hydroxychloroquine, we realized that this could be a very good drug to use for the treatment of high-risk patients infected with COVID-19, who might deteriorate rapidly and progress to hospitalization and need for ICU care. Remdesivir also seems like an excellent anti-viral drug, but it is given intravenously, and is probably reserved for COVID-19 patients who are already entering into severe respiratory distress in the hospital.

Hydroxychloroquine, on the other hand, is given orally, and is cheap and readily available.
Low doses (6.5 mg / kg) have been effective in the management of Systemic Lupus Erythematosus and Rheumatoid Arthritis. 200 mg tablets are usually prescribed twice a day with meals; dosage can be increased up to the recommended 6.5 mg/kg if the patient tolerates the lower dose. **We wondered if the low dose hydroxychloroquine would be able to be studied quickly in various COVID-19 patients, especially those who are older and / or with medical conditions that put them at higher risk for pneumonia and complications (cardiovascular disease, chronic pulmonary disease, hypertension, diabetes, etc.). In addition, hydroxychloroquine may even be a useful drug to prevent the development of pneumonia in patients diagnosed with COVID-19.**

Because hydroxychloroquine in an older drug that is generic, current pharmaceutical companies have no incentive to do studies or research on its effectiveness for any new medical conditions. Therefore, the federal government would most likely have to construct and fund the studies. Perhaps Dr. Fauci has already considered this kind of study with hydroxychloroquine.

We understand that vaccines are already being studied, and Israel is working on an oral (pill) vaccine. Vaccines take time to go through testing and trials, which is why we are suggesting to you that studies be done on hydroxychloroquine, a readily-available oral drug that could “bridge the gap” to provide some potential treatment and mitigation of the COVID-19 infections while vaccines are being developed and mass produced.

We have attached several articles, which are electronic publications made available in advance (Feb. 4th & Feb 19th, 2020) of the printed journal publications. We will send a copy of this email to Dr. Fauci, Dr. Redfield, and Dr. Azar.

Sincerely yours,
Drs. Paul & Karyl Stanton

Subject: One solution in the armoury to protect Health Care Sector Workers against Covid-19

Dear Dr Fauci

A PPE device, tested and proven at **Public Health England Porton Down** (PHE), based on innovative technology could be ready to go into production within 20 weeks. It sterilises all airborne pathogens as air is inhaled by the wearer. See www.medi-immune.com and in particular the published report on the tests, by clicking on the report under "The Science" The device is due to undergo further tests, at PHE within the next week, specifically against Covid-19. For verification please contact Professor Nigel Silman at PHE Porton Down.

Health Services around the world are doing what they can to prepare for a significant increase in infections from this highly transmissible virus and if those people in the Health Care Sectors are infected the situation could become untenable.

The production of vaccines is under way but no one expects them to be available within the next 12 to 18 months. The Medi-Immune "ProtectivAir®", which has been under development for some years and could be available within a few months, will give a far greater level of protection than the current masks and respirators and more importantly can remain in use in the future for other emerging airborne pathogens – known, unknown or mutating.

Please take a little time to investigate this option, via the website, or pass it on to those who you believe need to be made aware of it. I will be happy to answer any questions, technical or otherwise, at my email address below or on my mobile number, also below.

Kind regards

James Love

To: Fauci, Anthony (NIH/NIAID) [E] (b) (6)>
Subject: A sharing on COVID ARDS research

Hi Dr. Fauci, I am a trained epidemiologist and expert in evidence based medicine. Particularly in developing clinical practice guidelines and I teach EBM and GRADE methods.

You have no idea how much I have admired you across the years, your intelligence and poise.

May I ask how I may help you in this matter, this response, I am not talking about money, I wish to help, volunteer.

I draw your attention to 2 attachments...

1) one is a one page I wrote to summarize a meta analysis my team just completed and seeking to publish. It pertains to corticosteroids and ARDS. We are raising that this suggests indirect evidence that we may be able to extrapolate to the COVID patient with severe illness. This within the life threatening issue and emergency and no effective treatment. I share if this can

help you as I know you are leading this and listened to you today with the president. I support this president fully.

2) I share a paper published today, it on the other hand raises serious questions on the use of corticosteroids in influenza associated ARDS, and one may argue this patient set, is the closest to the COVID 19 patient.

My sense is that the accumulated evidence thus far is weak and argues against corticosteroids. For example, this recently published multicenter retrospective cohort study in medical center ICUs across Taiwan sought to assess the effectiveness of corticosteroids in patients presenting with influenza-associated ARDS (virology-proven ARDS and are on mechanical ventilation). Researchers examined the impact of early corticosteroid treatment (≥ 200 mg hydrocortisone equivalent dose within 3 days after ICU admission, determined by a sensitivity analysis) on subsequent hospital mortality. The study revealed that of the 241 patients with influenza-associated ARDS, those receiving early corticosteroid had a significantly higher hospital mortality rate than those who did not get early corticosteroid [43.5% (37/85) vs. 19.2% (30/156), p < 0.001]. Early corticosteroid treatment was independently associated with increased hospital mortality in overall patients [an adjusted OR of 5.02 (95% CI 2.39-10.54), *p* < 0.001] and in all examined subgroups. Researchers found that a higher dose and earlier treatment was linked to higher hospital mortality. Moreover, they found that earlier treatment was related to a significantly increased odds of subsequent bacteremia [an adjusted OR of 2.37 (95% CI 1.01-5.56)]. These results underscore the urgency for robust comparative randomized research given this study is based on weaker observational evidence that is confounded by selection bias and confounded. However this was a stronger study that used statistical adjustment and propensity score matching. Thus this study suggests caution with corticosteroid and thus the importance for caution by clinicians as to the potential harms of corticosteroids in this population. These results, while based on weaker methodology, have revealed large estimates of effect, is the strongest evidence to date on treatment for ARDS, and brings us closest to the COVID-19 ARDS patient.

To: Fauci, Anthony (NIH/NIAID) [E] (b) (6)>
Subject: Suggestion

Dear Mr. Fauci,

This may be way too presumptive of a note...
As an engineer I've always liked to understand the mechanics of how things work so I looked into educating myself about the coronavirus and it's mechanics. (b) (6) I've correlated a possible research route for your organization regarding the prevention aspect.

A quick overlook on this strategy is the following:

Coronaviruses are RNA viruses that typically enter human cells when their glycoproteins bind proteins on the cell surface. In the case of the virus that causes SARS, that human protein is **angiotensin-converting enzyme 2** (ACE2). At this time, scientists think the novel coronavirus is similar enough to SARS that its entry point is likely ACE2 as well.

source: https://cen.acs.org/biological-chemistry/infectious-disease/novel-coronavirus-hits-China/98/web/2020/01

Irbesartan is used to treat high blood pressure (hypertension) and to help protect the kidneys from damage due to diabetes. Lowering high blood pressure helps prevent strokes, heart attacks, and kidney problems. Irbesartan belongs to a class of drugs called **angiotensin receptor blockers** (ARBs). It works by relaxing blood vessels so that blood can flow more easily.

source: https://www.webmd.com/drugs/2/drug-4720/irbesartan-oral/details

Idea:
Can Irbesartan, being an angiotensin receptor blocker, possibly help prevent Coronavirus infections... since the Coronavirus entry to humans is via ACE-2?

I share this suggestion with you in the hopes that it may help your department in the research to prevent the spread of the coronavirus... or to a presumptuous email slated for deletion.

Sincerely,
-Leslie Gardonyi

Subject: kudos and comment about JAMA Coronavirus article

Dear Tony,

Wonderful articles in JAMA and NEJM. So glad you are still heading NIAID- it is comforting that there are experts of your caliber still in the room. And thrilled that the NIAID has done so much to develop rapid timelines for DNA vaccines and that you highlighted that progress in the article, since people call me the "Mother of DNA vaccines,".

As a former NIAID Council member, I felt I should write to raise an issue that I am sensitized to as a scientist who is ethnically Chinese while American:
Why in the JAMA article was it necessary to state that the first travel-related case to the US was a *Chinese* man (italics mine) who had visited Wuhan. Did his being Chinese either ethnically or by citizenship affect anything biologically?

I ask because not only have many Asian people now encountered increased racism in public places (due to fear that any Asian person is a source of COVID-19), but now that the President is turning this epidemic into additional fear-mongering about "borders" it seems all the more important that scientists do not inadvertently add to "xenophobia" (even though non-white skin does not mean a person is foreign) and do not seem to advance any political perspective.

Sincerely and with best personal regards,
Margaret

Much appreciation for all of your work past and present. I am a cardiologist in New Jersey and when I read that the virus attaches to the AT2 receptors in the lungs I couldn't help but think that maybe the class of ARB's that we use so frequently for HTN and heart failure management could possibly block entry of virus into cells and prevent or mitigate the severity of infection. Has this approach ever been studied and is it worth looking into? Imagine if ARBs could lessen the severity of infection how readily available and relatively inexpensive this class of medication is! Would appreciate if someone could get back to inform me whether you received this message. Thanks. Dr Thomas Leopold Email: (b) (6)

Subject: Coronavirus question

We met many years ago, Tony,

...at an event marking Shelly Wolff's 10 year anniversary at New England Medical Center. (I had the distinction of being the first medical intern in that program who he reamed out.)

My question relates to travel restrictions. The current restrictions appear to be quite limited, but several organizations, including Google, Amazon, and the HHMI have restricted, or cancelled, even domestic meetings. As a result of the HHMI cancelation, my own program director indicated his intention to cancel our upcoming Scientific Advisory meeting and, in the non-academic world, (b) (6) [redacted] (which is ironic since there are more coronavirus infections in my town of (b) (6) Oregon than there are in all of New York).

In addition to announcing the new travel restrictions, could you also say something publicly about what doesn't need to be restricted? In particular, is domestic travel OK, or not? Does the HHMI know something the rest of us don't?

Sincerely,
Richard Goodman MD PhD

Subject: Fwd: Rapid Collaboration for Hand & Nasal Decontamination Formulation

Dear Dr Fauci,

Dr Murad sits on our BOD and has suggested that we contact you to help expedite a rapid testing of our product on the COVID-19 virus. I know you are probably overwhelmed but hope you might pass this along or suggest a strategy that would be a win-win for us all.

We have developed a non-alcohol based formulation that utilizes the nanomolecule nitric oxide (NO). as you know, NO is produced in our body and is our first line of defense against microbes. We have harnessed this in a patented formulation called nitric oxide releasing solution/gel (NORGS). We are focused on the development of products for chronic sinusitis, diabetic foot wounds, warts and toenail fungus.
However, internally & personally, we have been using NORGS as an extremely effective natural hand sanitizer and nasal spray to protect ourselves from the common cold and flu for years.
There are strong independent published research that NO is antiviral against Corona viral species. We hae data showing definite virucidal characteristics and moderate antiviral effects in host cells.

With the recent concern with COVID-19, we felt we should try to rapidly test the hand rub and nasal spray against the COVID-19 but need to collaborate with a laboratory that could test this for us. Funding collaborators are welcome too, as this was not in our budget but we feel a social responsibility to move this forward.
I have included a short white paper of our data and a few articles to support our claims.
Feel free to contact me any time (b) (6)) or have one of your senior staff contact me.

Sincerely,
Chris Miller and Gilly Regev

> Scientists in my laboratory at Columbia University are actively engaged in design strategies to cope with the new strain of coronavirus, 2019-nCoV, which has caused a global public health emergency. We have embarked on a project entitled "Nucleotide Analogues as Inhibitors of Viral Polymerases". We provide a summary of this work below.
>
> Coronaviruses such as the newly discovered virus from Wuhan, China, 2019-nCoV, and the viruses that cause SARS and MERS, have resulted in regional and global public health emergencies. Based on our molecular insight that the hepatitis C virus and the coronavirus use a similar viral genome replication mechanism, we reasoned that the FDA-approved drug EPCLUSA (Sofosbuvir/Velpatasvir) for the treatment of hepatitis C will also inhibit the above coronaviruses, including 2019-nCoV. To develop broad spectrum anti-viral agents, we further describe a novel strategy to design and synthesize viral polymerase inhibitors, by combining the ProTide Prodrug approach used in the development of Sofosbuvir with the use of 3'-blocking groups that we have previously built into nucleotide analogues that function as polymerase terminators.

>
> Dear Dr. Fauci,
> I understand the need for the various stages of testing a new experimental vaccine, but in listening to you give a timeline for any new vaccine for the corona virus, it struck me that perhaps a modified approach might be considered. Why not allow early use of a vaccine that has passed a phase 1 safety testing, similar to what was done for the Ebola vaccines. If a vaccine is shown to be reasonably safe, why not allow its use it in more at-risk people (elderly, smokers) before phase 2 trials are finished. It could also be helpful as with the Ebola vaccines to prevent transmission in hot spots of community acquired infections. There doesn't seem to be much downside compared to the potential for preventing many more deaths than was seen in the Ebola situation.

Subject: RE: Coronavirus

Hi again Tony. Here's a link to a non-technical explanation of the paper I shared with you earlier:

https://insights.som.yale.edu/insights/new-outbreaks-of-coronavirus-can-be-halted-with-isolation-measures-according-to-study

I have seen predictions stating that upwards of 30% of the world's population will be infected, but I don't see this happening. What I do see are lots of local outbreaks from imported cases, some larger than others, but all heading towards containment. I find Israel to be an interesting test case. A group of infected Korean tourists who visited the country only tested positive for coronavirus after their return to Korea, joining the large outbreak that has been reported there. The itinerary of their travel group has been made public so that retrospectively, Israeli public health officials could ascertain who was exposed where and when (see https://www.health.gov.il/English/News_and_Events/Spokespersons_Messages/Pages/23022020_1.aspx). Already 1,600 Israelis have been quarantined on account of possible exposure. It has been twelve days since this group of tourists returned to Korea, and no new infections have been reported in Israel associated with this group (there are two Israelis who were infected on the Diamond Princess cruise ship, and one infected while in Italy). See https://www.ynetnews.com/article/H1nXPa7E8. It will be interesting (and important) to see how many new infections are detected in the days ahead, and if such new infections are found among those already under preventive watch.

Nonetheless I totally concur with preparing as if major transmission will occur. Much better to err by over- rather than under- preparing (a familiar perspective from those bygone smallpox debates).

Finally, a reporter asked me yesterday afternoon what I wanted the President to say last night. Here was my response:

In a sober way summarize the facts of the outbreak, state that the US has an excellent preparedness team between CDC and NIH, that at the advice of this team travel restrictions and quarantine measures have already been enacted, but as of now the public is at very low risk of infection. Still, citizens should go to cdc.gov now to learn from our experts how to prepare in the event that more extreme measures are needed, stay abreast of the situation here and abroad and follow the advice of our experts, get a flu shot (!), and know that the US has a very strong public health system that can withstand this challenge.

Anyway, just wanted to share all this with you. Keep up the good work and good luck with the vaccine research, Ed

Subject: Coronavirus containment modeling

Dear Dr. Fauci,

It has been many years since we corresponded regarding smallpox bioterrorism and vaccination control.

The attached paper on containing a community coronavirus outbreak from a few initial cases via isolation and quarantine might interest you. The news is mostly good - isolation and quarantine can get the transmission rate below epidemic threshold - but the key is rapid detection of infected persons. Also discussed are some ideas for alleviating congestion in the hospital. I hope that you find it helpful.

Best, Ed Kaplan

Importance: High

KEYSTONE SYMPOSIA™
on Molecular and Cellular Biology
Accelerating Life Science Discovery

Greetings,

In light of the current coronavirus situation, we would like to provide an update on your upcoming Keystone Symposia conference.

The health and safety of our meeting attendees and speakers is our top priority, and we are carefully monitoring the coronavirus situation around the world to ensure we take the necessary precautions as recommended by healthcare providers and public health organizations.

Currently, ***your meeting will proceed as scheduled***, and we will contact you immediately if anything changes. Decisions will be made on a moment to moment basis, as new information becomes available. We assure you that the leadership team at Keystone Symposia is closely monitoring global developments and will take swift action to ensure the health and safety of all meeting participants.

As a speaker, you hold a very special role at the meeting as a field leader. We very much appreciate your contribution to both the scientific program, and the community of luminary scientists who will convene to direct the future of the field. Your presentation will be a highlight for many attendees, and your insights will inspire others to take on new and innovative directions in their own work. This is the essence of Keystone Symposia -- convening communities of leading scientists to inspire each other to advance biomedicine, and this would not be possible without your engagement.

We realize the current situation may add some inconveniences to travel at this time, but we also remind you that each and every one of our speakers is hand-selected by a committee of the world's leading experts to represent their field at the meeting. You are among a very select few to receive this honor.

The meeting organizers, and our team at Keystone Symposia, have put a great deal of time and effort over the last two years into designing the program, and your presentation is a key part of that. We hope you will take these thoughts into consideration as the meeting approaches.

While this is a time we must all be vigilant about public health measures, we are reminding conference attendees that this is also a time to remain calm, rational and scientific in addressing the situation. We encourage you to engage with your fellow colleagues at the meeting as you normally would, to forge new collaborations and novel ideas that will drive your research and the field in innovative and fruitful directions. At the meeting, we are providing the following suggestions based on recommendations from the National Foundation of Infectious Disease:

- ***The best way to protect yourself against COVID-19 is similar to how you would take precautions against the cold or flu.*** Wash your hands often using soap and water for at least 20 seconds. Cover your cough or sneeze with a tissue or the crook of your elbow rather than your hands.

- ***There is no need to wear a face mask if you are well and do not have symptoms***—masks protect the sick from spreading germs but will not prevent you from getting sick.

- ***Do not assume that anyone of Asian descent is more likely to have coronavirus***—do not forget about the importance of inclusivity and evidence-based information.

Again, we thank you for your contributions and commitment to Keystone Symposia and wish for a very successful and inspiring meeting.

Sincerely,

(b) (6)

Subject: invitation to speak on COVID 19 at the International ATS Conference in May

Dear Dr. Fauci,

I don't believe that we've formally met, but I have seen you frequently on 5SE as I admit patients there and often participate in the ward rounds. I am an AI on several of Steve Hollands protocols, and I often help with the drug-resistant TB cases. I have been at the NIH now for over 4 years, although I still feel like the new guy on the block! Most of my career has been focused on quantifying the infectious aerosols generated by TB patients. I am very involved in the leadership of the American Thoracic Society (ATS) as the Past Chair of the Assembly on Pulmonary Infections and TB. I am writing to invite you to be a keynote speaker at a special Scientific Session being added to our International Conference May 16-20 due to the emerging pandemic of COVID-19. The exact time and data are not yet known, but the conference is relatively close in Philadelphia. This would be an opportunity to address and educate global academic leaders in pulmonary and critical medicine, infectious diseases, and public health. We usually have over 15,000 attendees at the ATS meeting. I am attaching the email string below to give you an idea of other speakers being considered.

I can only imagine how busy you must be now, so I apologize if this invitation is a distraction or a nuisance. And I would certainly understand if you are unable to join us given the demands on your time, but we would be absolutely delighted if you could speak.

Please feel to call or contact me at any time with questions or comments.

Sincerely,
Kevin Fennelly

Subject: Invitation to Spanih meeting

Dear Dr Fauci,

Hope this mail finds you well. We had the opportunity to meet in Madrid during the R4P meeting. I was the local chair of the Conference and had the privilege of introducing your talk to the plenary.

I would like to invite you as plenary speaker to the meeting of the Spanish AIDS Society (GESIDA) that will take place in Málaga, Spain next 30th November 2020. GESIDA Congress is the most important HIV national meetings in Spain that brings together the full "HIV Community" including clinicians, basic researchers, experts in epidemiology and public health and member from NGOs and patients' associations. Overall 700 attendees are expected to come to the meeting.

We would love to have you as a speaker in the Opening Plenary Session in evening the 30th November. Your challenging articles regarding the strategies to end the HIV epidemic in the United States, will be a great topic to be addressed in such session and an inspiration to Spanish researchers. If you prefer to talk about a different topic as the co-morbidities scenario in HIV infection it will be welcome too.

We would be more than happy if you could participate in this meeting.

If know your agenda is always full, even more these days with the current Coronavirus outbreak, but if you could accept this invitation I think this can represent a real boost in the fight against HIV epidemics in Spain, a field in which the Spanish AIDS Society is strongly committed.

It would we wonderful if we can have you as a speaker.

Best wishes

Jose Alcamí

To: Conrad, Patricia (NIH/NIAID) [E] [redacted] (b) (6)>
Cc: [redacted] (b) (6); Judi Irastorza <Judi.Irastorza@economicclub.org>
Subject: David Rubenstein's invitation to Dr. Fauci

Patricia,

David Rubenstein asked that we reach out to you in an effort to schedule an Economic Club of Washington event that would feature Dr. Fauci in a conversation with David on COVID-19. It is my understanding that David had a similar interview with Dr. Fauci in the last week or so.

Below are several dates from David's calendar for your consideration.

Wednesday, April 22 – Breakfast

Tuesday, April 28 – Breakfast or lunch
Tuesday, May 5 – Breakfast or Lunch
Friday, May 15 – Lunch

Additionally, I have attached an invitation letter from Mr. Rubenstein to Dr. Fauci for your convenience. The Economic Club has the ability to turn around an event in a relatively short period of time. As you may recall, our events typically take place at breakfast, lunch or dinner, at downtown Washington, D.C. hotels. Events that feature a prominent world leader, such as Dr. Fauci, generally attract a select audience of over 500 members and guests from among Washington's business and government leaders, as well as the diplomatic corps.

We understand the complexities and constraints of Dr. Fauci's schedule and can be responsive to his needs. If none of the dates above work with Dr. Fauci's schedule, please suggest some that will and we will work with David to confirm a date and begin the process. I have copied Judi Irastorza, who I believe you have worked with in the past, and she will coordinate anything you need.

Sincerely,
Mary

Subject: Lack of preparedness for the coronavirus pandemic
Importance: High

Dear Dr. Collins and Dr. Fauci,

I am sorry to say that our lack of preparedness for the coronavirus pandemic has its roots in the way biomedical research is funded in the United States, as well as in the lack of leadership and vision on the part of NIH and its institutes since the SARS coronavirus outbreak in 2003. I try to expand on these problems in the article below. I would welcome your response to my thesis.

Sincerely,

Nejat Düzgüneş, Ph.D.

The Wuhan Coronavirus (COVID-19): Why there is no cure or vaccine

In their *Medical Virology* text published in 1994, D.O. White and F.J. Fenner stated "No convincing evidence has yet been obtained to link human coronaviruses with serious disease ..., but they are an important cause of that trivial but annoying disease, the common cold." This generalization changed drastically with the emergence of the severe acute respiratory syndrome coronavirus in 2002-2003 (SARS-CoV), and the National Institutes of Health (NIH) immediately sought the expertise of these two scientists at the time. *Now, 17 years later, we still do not have an antiviral medicine or a vaccine against the novel coronavirus* that originated in China, now designated as COVID-19 by the World Health Organization (WHO). On February 21, there were 75,567 cases and 2,239 deaths in China; and 1,152 cases outside China, with 8 deaths, according to the Director-General of the WHO. The two viruses appear to use the same gate (or "receptor") on host cells to infect them. Despite such expected similarities between new and old strains of the virus, research on coronaviruses has not been a priority for the National Institute of Allergy and Infectious Diseases (NIAID). In the end, all that the Director of NIAID was able offer is "good healthcare" as a remedy for COVID-19 infections.

The major reason we do not have a cure for coronaviruses is that there has been no coordinated effort by the NIAID to establish long-term research programs focused on coronaviruses. Realizing the insufficient progress in this area, the NIAID announced on February 6 a "Notice of Special Interest to highlight the urgent need for research on the 2019 novel Coronavirus." Grants have indeed been awarded to some scientists since 2003, but such grants are highly competitive, with success rates of applications to NIAID between 14 and 18%, indicating that 82-86% of applicants are unable to obtain funding to carry out research. The *time* and *effort* spent on preparing grant applications to NIH are enormous, diverting these precious resources from actual research to what some scientists call "grantsmanship" (essentially, the ability to sell your idea to a review committee!). These "games scientist play" to procure funding are a hindrance to the progress of science. *The fact that we do not have a cure or a vaccine against coronaviruses over the past 17 years since the SARS epidemic, attests to this detrimental effect*.

Development of a vaccine against COVID-19t is also not straightforward. SARS was probably not considered by NIH to be an important pathogen on which to spend resources. Even if the biomedical research community had developed a vaccine against coronaviruses, pharmaceutical companies would probably not have considered it a profitable endeavor. *Therefore, it is essential for public funds to be used by NIH and the CDC to both discover an effective vaccine and to manufacture it.*

We need to ensure that long-term projects to develop antivirals and vaccines against coronaviruses and other infectious agents, including tuberculosis and influenza virus, are implemented and fully funded. *We need to have a funding system that does not depend on the often unfounded criticism or whims of grant reviewers*. Although the current peer review system is touted generally as the best way to allocate funding, *it has never been tested scientifically* against an alternative. While half of the NIH budget (currently $39 billion) may still be allocated for high-cost projects, including clinical trials, the other half should be awarded for periods of 10 years or longer to established scientists who have a track-record of scientific work, as well as to young scientists who are starting their first independent position. The budgets of these grants would be somewhat limited, but would provide uninterrupted funding and alleviate the stress of competing for renewals every 3–5 years. Scientists opting for these grants will not have to submit extensive grant applications. *More importantly, this system will more than double the number of independent investigators*. After a 10-12 year period, the scientific productivity (*per grant dollar*) of scientists on the classical grant system would be compared with that of scientists on long-term funding. *After all, the way we choose the mode of science funding should conform to the way science progresses, by experimentation and analysis*.

Dr. Fauci,
This may be terribly simplistic, but if Covid-19 binds to ACE2 receptors in host cells, has anyone looked at ACE2 receptor blockers as potentially ameliorating disease severity or infectivity?
Sincerely,
Robert Alan Durr, M.D.

Dear Tony,
This note is between long time colleagues.
This entire Coronavirus story, and the handling of it, has really escalated into an unexpected journey. I want you to know how much I have respected you professionally and medically for nearly 20 years. I also want you to know that I have appreciated how we have communicated through the years about threats to our world's health and how honest and transparent you have always been. I know you are in a unique situation and I want you to know that I respect that and would never put you in a situation with my correspondence that would jeopardize you in anyway. With that said, I hope you can keep me informed, off the record if need be, so I can continue to cover this story honestly and fairly.
With utmost respect,
Kyra

Subject: question

Tony,
As you are acutely aware, the COVID-19 situation is on everyone's mind and accordingly there have been questions raised by members of the AAAAI about what the organization can do to provide more guidance in this evolving situation. In light of this linked to the fact that our annual meeting begins March 13 in Philadelphia, we have made the decision to have a 45-60 minute session in the main hall on Saturday (March 14) morning from 7:00-8:00 prior to the scheduled plenary session slated to start at 8:15. My question is whether you would consider taking the Acela up Friday evening returning Saturday morning to host this session with a presentation followed by a Q&A session. If that is not possible, would you be willing to provide a 10-15 minute (shorter if you deem that appropriate) video generated as close to the 14th as possible that we would have projected in the main hall as noted above. If the latter, would you have a suggestion of an ID person in Philadelphia who would be knowledgeable and could field questions following your video. I recognize that even if you are willing to come to Philadelphia, that circumstances could arise that would preclude your traveling in which case we would ask for a video if at all possible. Finally, if neither option is possible, is there somebody in DC (including NIH), Baltimore or Philadelphia who could provide the short review and then sit for 30-45 minutes of Q&A. I am well aware that this is last minute and you have been incredibly busy with issues related to the pandemic, any help you could provide would be much appreciated by my colleagues and me.
Regards,
Tom

Subject: Invitation to speak at National Academies workshop

Dear Dr. Fauci,

It is my pleasure to invite you to present at the National Academies of Sciences, Engineering, and Medicine workshop on "The Critical Public Health Value of Vaccines – Tackling Issues of Access and Hesitancy." This workshop will be held on May 28-29, 2020 at the Pan American Health Organization (PAHO) headquarters in Washington, DC. The statement of task for the workshop is attached.

The 1.5-day workshop will provide a venue to examine the current state of vaccine preventable diseases and the impact of vaccine access and hesitancy on vaccine preventable diseases globally, as well as the multidimensional drivers and impacts of declining vaccine confidence. This workshop will explore health systems, research opportunities, communication strategies, and policies that could be considered to address access, perceptions, attitudes, and behaviors toward vaccination. The workshop will be broadcast live over the web to an international audience, and is being hosted by the National Academies' Forum on Microbial Threats.

Due to your in-depth expertise in this field, we would like to invite you to give a plenary presentation on **the development of new vaccines in the midst of an outbreak, specifically on the prospects of a coronavirus vaccine**. The primary audience for the event will be researchers, health practitioners, industry leaders, and policy makers in infectious diseases and global health, so we are looking to initiate this workshop with relevant discussions of barriers to accessing vaccines. Your responsibilities would be to prepare and deliver a 15-minute presentation. We would cover your travel expenses in accordance with U.S. federal government rules. We would be thankful to have your involvement in this workshop. Please let me know if you might be interested. I would be happy to answer any questions you may have.

Thank you in advance for your time and consideration. We understand that this is a very busy time and your calendar may be in flux.
Best wishes,
Julie

Subject: Re: Question on report Dr. Fauci told he cannot speak with media unless cleared by White House

Thank you. Also, can you please clarify what was in the VP pool report today.

Do they now know the novel coronavirus jumped from a bat to a civet cat [skunk] served at feasts in China and then jumped to humans?
Is that the source for certain? Or was he just giving an example? Is there something you can provide to show that information?

Thank you again.

Subject: Question on report Dr. Fauci told he cannot speak with media unless cleared by White House

Good Day: Could you please comment on this report from the New York Times that Dr. Fauci has been told that he must clear anything he plans to say about the coronavirus outbreak with the White House before he speaks to any media?
https://www.nytimes.com/2020/02/27/us/politics/us-coronavirus-pence.html

"Dr. Anthony S. Fauci, one of the country's leading experts on viruses and the director of the National Institute of Allergy and Infections Diseases, told associates that the White House had instructed him not to say anything else without clearance."

Has Dr. Fauci or any other NIH official been told by the White House they cannot speak to the media unless cleared by the White House?

Please do let me know.

Thank you for your help.

Subject: Covid-19--Conference Call Invitation

On behalf of Ms. Gopinath:

Dear Professor Fauci:

We are contacting you in the context of the evolving spread of Covid-19, which is already impacting livelihoods and economic activity in several countries. As you may know, the IMF publishes forecasts of economic growth for member countries four times a year, as well as macroeconomic policy recommendations. In that context, it would be invaluable for us to hear public health experts' views on the likely trajectory of the virus—the number of people that are likely to get infected in different countries and the likely time path. We would also benefit from hearing experts' views on the optimal public health policy response in different types of countries (countries with stronger or weaker health systems, different development levels, etc.), and the implied resource needs.

We are planning to set up a conference call with several experts to discuss these issues and were wondering if you would be available to join us. If you would be interested in joining, would you be able to let my assistant Lucia Buono (lbuono@imf.org) know of some dates and times that would work for you this week or early next week?

We would be extremely grateful for any guidance you might be able to offer as we strive to do our part in helping member countries respond to the epidemic.

Best regards,

Gita Gopinath
Economic Counsellor and Director
Research Department
International Monetary Fund

To: Fauci, Anthony (NIH/NIAID) [E] < [redacted] (b) (6)
Subject: My OpEd on the WSJ coming out Friday on convalescent serum for Coronavirus

Dear Tony,

I just had an OpEd accepted in the WSJ proposing the use of convalescent sera to stem the coronavirus epidemic. The text of the OpEd is below in blue font (scroll down). I am sure the WSJ will shorten it and edit it but at least you have an advance copy of it. I just wanted you to have it since the WSJ is read widely in DC and I don't want anyone blindsiding you with questions about it.

As you know I have been long proponent of passive antibody therapies in infectious diseases and there is a huge body of historical data supporting this approach. Certainly, with modern blood banking techniques this option can be made quite safe and administration of a few cc's of serum could confer immediate immunity to those who will be exposed – like ER staff. I hope you agree with the message and like it.

Thank you for all you are doing for the country and humanity. If you need me for anything in this crisis rest assured that I am here.

Warm regards,
Arturo

To: Arturo Casadevall [redacted] (b) (6) >
Subject: Re: Asking for a quick decision on the submitted OpEd on stemming coronavirus epidemic

OK, we'll take this and aim to get it out in Friday's paper, though it will likely need some trimming for space.

Dear Mr. Varadarajan,

I wonder if the WSJ is interested in my OpEd. I am trying to get a message out that convalescent serum (e.g. serum from people who recover) can be used to stem the coronavirus epidemic if administered to exposed people. This has been known for over a century, and is well accepted, but not widely known, even among experts today. There was one report that China was beginning to stockpile serum but there has been almost no discussion of this option among world public health authorities. Although I can get this published in a medical journal my hope is to publish it instead in a venue of high readership since this is something that can be done today to stem the epidemic. I am hoping that given the economic consequences of the outbreak that the WSJ is interested. I included a brief bio below. Thanks for looking at this.
Arturo

Proposed op-ed.
To Stem the Coronavirus Epidemic use Survivors Blood.

Subject: RE: Single-cell RNA expression profiling of ACE2, the putative receptor of Wuhan 2019-nCov | bioRxiv

Oh, I see what they are getting at. They examined at the single cell level the expression of RNA for ACH2, which is the receptor for the Coronavirus in the lung ,and found that when they looked at various demographic groups there was greater expression of this receptor in Asian males. They are thus hinting that this is the reason why there was such an explosion of infections in China. This is possible, but the lowest level was in Northern Italians and take a look at what is happening in Northern Italy. I do not mean to put the paper down since there may be some truth in it. However, this journal (bioRxiv) is not peer reviewed and the data are skimpy. Someone should do a more scholarly study.

They asked if this proved certain ethnic groups more likely to get the disease and I said I had never anything like that suggested to me by our leading scientists.

Hi,

Sorry for the late response, I just flew back from [redacted] (b) (6).

NIAD doesn't have ongoing trials with chloroquine and I heard that such trials are being conducted in China.

We are planning to evaluate chloroquine in animal models ASAP. If any therapeutic with a good clinical safety profile (like chloroquine) appears to be effective in vivo against COVID-19, we are planning to quickly add to them to the Remdesivir therapeutic trial as another arm.

Let me know if you have other questions.

Kind regards,

Cristina

Hi Tony,

Quick question – who would you suggest is the appropriate NIH representative for this ASPR-led trans-HHS effort to coordinate COVID-19 response? You and I will be testifying in front of the House Approps Subcommittee on Wednesday morning. Would it be best for Larry to represent NIH for the ASPR gathering (though he would normally attend the House hearing), or is there someone from NIAID that would be most appropriate?

Thanks, Francis

Subject: HHS COVID-19 Response - alignment of OPDIV/STAFDIV Efforts

Dear ASPR Colleagues,

We are at a critical juncture in our nation's response to COVID-19. As we pivot from containment of the virus to mitigation of its impacts, it is imperative that HHS moves swiftly, transparently, and in a unified manner to protect lives and save Americans. The Secretary has charged my office to lead efforts across the Department to prepare and defend our health care system during the novel coronavirus outbreak through the Health Care System Resilience Task Force.

To date, this task force has engaged with public and private sector stakeholders to broadly identify efforts that can be taken to help ensure preparedness in response to a domestic COVID-19 outbreak, and more importantly their gaps, challenges, and potential areas of need from the federal government. Now, we must build on that knowledge to expedite and execute a whole of HHS response to support protection of the health care system that spans public health, health care, and human services.

Please join Dr. Kevin Yeskey, ASPR's Principal Deputy Assistant Secretary for Preparedness and Response, and Dr. Nancy Messonnier, CDC's Director of the National Center for Immunization and Respiratory Diseases, on **Wednesday, March 4 from 9:00 AM - 10:15 AM**, at the O'Neill House Office Building for a working session to align current activities and next steps to be executed as part of a coordinated HHS response to COVID-19.

Please provide the following information to ASPR.HCSRTF@hhs.gov no later than Monday, March 2 at 12:00 PM, and be prepared to share and discuss at Wednesday's session.

- Your Designee(s) name, title, and contact information
- OPDIV/STAFFDIV name
- OPDIV/STAFFDIV current and future top five priorities related to COVID-19 (priority leads, descriptions, timelines)

- OPDIV/STAFFDIV key activities and workgroups (current and under consideration) related to COVID-19 response (include activity/workgroup leads, key purpose, timelines)
- OPDIV/STAFFDIV key areas of concern or challenges identified to date
- OPDIV/STAFFDIV core competencies or other assets it can bring to COVID-19 response efforts

We look forward to working with you on this critical effort to defend the nation's health care system. Thank you in advance for your support and participation.

Respectfully,

Bob Kadlec
ASPR

Hi Tony and Larry,

See below for a new Health Care Resilience Task Force being convened by ASPR.

The initial meeting overlaps with our House approps hearing.

Tony, who shall we send to this one?

FC

P.S. to Tony – I'm getting a lot of buzz about the Israeli claim to have fast track vaccine: https://israelb.org/2020/02/israel-to-have-coronavirus-vaccine-within-3-weeks/ It looks to me that they are conflating having something ready to put into volunteers for a phase 1 trial, and having full scale production ready to go for the global needs. That still seems like it's a year away. Am I right?

Subject: HHS COVID-19 Response - alignment of OPDIV/STAFDIV Efforts

Dear ASPR Colleagues,

We are at a critical juncture in our nation's response to COVID-19. As we pivot from containment of the virus to mitigation of its impacts, it is imperative that HHS moves swiftly, transparently, and in a unified manner to protect lives and save Americans. The Secretary has charged my office to lead efforts across the Department to prepare and defend our health care system during the novel coronavirus outbreak through the Health Care System Resilience Task Force.

To date, this task force has engaged with public and private sector stakeholders to broadly identify efforts that can be taken to help ensure preparedness in response to a domestic COVID-19 outbreak, and more importantly their gaps, challenges, and potential areas of need from the federal government. Now, we must build on that knowledge to expedite and execute a whole of HHS response to support protection of the health care system that spans public health, health care, and human services.

Please join Dr. Kevin Yeskey, ASPR's Principal Deputy Assistant Secretary for Preparedness and Response, and Dr. Nancy Messonnier, CDC's Director of the National Center for Immunization and Respiratory Diseases, on **Wednesday, March 4 from 9:00 AM - 10:15 AM**, at the O'Neill House Office Building for a working session to align current activities and next steps to be executed as part of a coordinated HHS response to COVID-19.

Please provide the following information to ASPR.HCSRTF@hhs.gov no later than Monday, March 2 at 12:00 PM, and be prepared to share and discuss at Wednesday's session.

- Your Designee(s) name, title, and contact information
- OPDIV/STAFFDIV name
- OPDIV/STAFFDIV current and future top five priorities related to COVID-19 (priority leads, descriptions, timelines)
- OPDIV/STAFFDIV key activities and workgroups (current and under consideration) related to COVID-19 response (include activity/workgroup leads, key purpose, timelines)
- OPDIV/STAFFDIV key areas of concern or challenges identified to date
- OPDIV/STAFFDIV core competencies or other assets it can bring to COVID-19 response efforts

We look forward to working with you on this critical effort to defend the nation's health care system. Thank you in advance for your support and participation.

Respectfully,

Bob Kadlec
ASPR

Importance: High

Good morning,

Attached, please find a current draft of an agenda for a TF Briefing for VPOTUS this afternoon. Note that this is a draft and is not final. However, in order to prepare the Secretary, can ASPA, IEA, and ASL please help with 2-3 high-level talkers each the Secretary could highlight under the External Activity/Messaging section of the agenda? Could you please send to me and Dr. Larry Kerr by **11 AM this morning**? Apologies for the quick turnaround.

Dr. Redfield, Dr. Fauci, and Dr. Kadlec, please note your presence on the agenda and please be prepared to speak to the topics assigned.

Let me know if you have any questions. Thanks for your help.

Morgan:

Thanks for the note and the offer to help. It would be great if you could tweet to your many Twitter followers that although the current risk of coronavirus to the American public is low, the fact that there is community spread of virus in a number of countries besides China and including South Korea, Japan, Italy, Iran among others poses a risk that we may progress to a global pandemic of COVID-19. If that occurs we will surely have many more cases in the USA. And so for that reason, the American public should not be frightened, but should be prepared to mitigate an outbreak in this country by measures that include social distancing, teleworking, temporary closure of schools, etc. There is nothing to be done right now since there are so few cases in this country and these cases are being properly isolated, and so go about your daily business. However, be aware that behavioral adjustments may need to be made if a pandemic occurs.

Best regards,
Tony

>
> Dear Dr. Anthony Fauci,
>
> It was a great pleasure meeting you all a couple of years ago when we were both speaking at the Aspen Ideas Festival. Some of my contacts at the CDC recently briefed me about the rapidly emerging threat of the coronavirus to the US and have been urging us to develop an app for detecting coronavirus with high sensitivity and specificity on our Gene-RADAR platform. Our platform has the ability to quantify viral loads in 'real-time' which would be a much more precise and accurate solution in deciding quarantine than the current thermometers or even the current CDC coronavirus test which has a very poor Limit of detection (ie low sensitivity).
>
> We have a strong track record of responding to previous pandemic threats and rapidly building Gene RADAR applications for Ebola and Zika and then getting them through clinical validation as per the the FDA EUA approval process. Our Gene-RADAR Zika test was FDA EUA certified right as the Zika crisis was coming to an end.
>
> I would love to work with you to see how we can help in your efforts to rapidly respond to this deadly threat to the US and the world. Here are some of the capabilities of our platform that we believe could be an enabler for helping to stop this out break from becoming a full-fledged global pandemic.

- Gene-RADAR platform for Real time Mobile (POC) Coronavirus detection/ viral load monitoring
    - Highly sensitive and specific – minimize false positives and false negatives
    - With very good LOD's we could potentially start to catch people presymptomatically and enable the early detection , early quarantine would limit the spread and early intervention could lead to better outcomes
    - More precise viral load monitoring could help determine when to release people from quarantine or ICU beds
    - Our platform's ability to quantify vial loads could change clinical trial endpoints for new drug candidates or (repurposed drug formulations), thereby accelerating FDA approvals for novel therapeutic regimen
    - We already have an ISO 13485 certified manufacturing facility (currently in Boston) that we are prepared to move as fast as possible to ramp up our production

      We would love to work with you to repurpose our FDA approved platform for the above coronavirus applications assay and help your noble efforts to stop this outbreak from becoming a full blown global pandemic that could costs thousands of lives and cause trillions of dollars of economic damage to the global economy.

We would love to speak with you to brief on our capabilities and discuss how we can qualify for some of the emergency funding being made available to help tackle this pandemic threat.

Happy to jump on a phone call to discuss further how we can help

Dear Dr Fauci,

Many thanks for your quick reply and for the clear list of responses regarding the proof. I will review today and will let you know if there are any items needing further discussion.

The current plan is for publication early Friday afternoon. As I mentioned yesterday, there is a new article on Covid-19 that is also scheduled for publication that day, and the Journal editors would like you to mention it in your editorial. I expect to be able to send you a proof of that article sometime today.

Best,
Eli

Subject: NEJM content proof (Fauci)
Importance: High

Dear Dr Fauci,

Attached is the content proof of your editorial. **Please read *ALL* of the following instructions and information carefully before** you begin reviewing your proofs.

First, please **stop and take a moment now** to confirm receipt, so that we can be assured that your proofs did not end up in a spam folder.

Your editorial has been edited for grammar, consistency, readability, adherence to Journal style, and clarity for nonspecialist readers. To expedite publication, we do not ask authors for specific approval of routine changes; please read the entire article to make sure your meaning has been retained. Note that we may be unable to make changes that conflict with Journal style or create grammatical or other problems. Finally, please note that a delayed or incomplete response may delay publication of your editorial.

Please read the entire proof carefully, including all queries. Please return your query replies and proof corrections ****before 12pm (US Eastern) this Friday, February 28, 2020****.

Instructions are provided below. Note that you will be reading for content only; the article will be rendered for print after the content has been finalized.

The Journal's senior medical editors will be reading your article at this stage. If they have any additional comments or queries for you, I will forward them to you in the next few days.

TO ANSWER THE QUERIES: The proof contains in-line numbered query markers and a numbered list of queries at the end. The query markers and the queries are linked, so you can jump back and forth within the file. Please respond to all the queries (see below for instructions; please do ****NOT**** use e-annotation tools) and convey any additional changes as needed.

TO RESPOND BY E-MAIL: If your corrections and your responses to the queries are straightforward, we encourage you to respond by replying to this message. Please copy and paste the list of queries into an e-mail message or a Word document and type your responses there. You may also include a list of changes (e.g., page 1, line 20, change xxx to yyy). Again, please do ****NOT**** use e-annotation tools in the PDF file; the marks are small and easy to miss, which may lead to errors in your article.

Please note that this material is confidential and embargoed until publication. If you have questions about our embargo policy, please contact NEJM Media Relations at 781-434-7847 or at Mediasupport@nejm.org.

Again, please do confirm receipt at this time. Thank you very much for your efforts with these content proofs!

Best,
Eli

This is something we would do in our studio at our office near Dupont Circle. We normally do them for 45-60 minutes, and we take questions (visa Twitter) from our audience. The audience would be reporters who cover the topic, as well as others interested in the topic. It is a way to have an in-depth, thoughtful conversation about a pressing topic.

Here are a couple we've done (the first is on Zika a few years ago):

Zika panel discussion: https://nationalpress.org/topic/understanding-the-zika-threat/?st=0&t=&mm=Video
Ted Koppel: https://nationalpress.org/toolbox-topic/lights-out-risks-to-the-power-grid/?st=7042&mm=Video
Autonomous vehicles panel discussion: https://nationalpress.org/topic/whats-new-with-autonomous-vehicles/?st=8474&t=Automation&mm=Story

We'd like to do one of these on coronavirus. We'd love to have Dr. Fauci as our prime guest.

We can schedule it around his demands, but would of course love to do it as soon as possible.

We know he is in demand at this moment. But he is such a singular expert on the topic we'd love to have a discussion with him – one that would help get his message out to journalists (and others) who need to be informed to best cover the topic.

Is it possible to check with Dr. Fauci to see if this is possible?

Thanks,
Chris Adams

Subject: BBC Radio

Dear Dr. Fauci,

Newshour on the BBC World Service is today covering the US preparedness on the Coronavirus

Would you be available for interview on this topic?

We're on air at 3pm eastern and could speak to you live at around 3:10pm or alternatively we could record a few minutes between now and then. About 8 minutes duration and we've many ways to connect to get good audio (no video as we are radio).

If there is interest from your side then I'm on + [redacted] (b) (6)

Yours sincerely,

Paul Coletti

Importance: High

Dear Dr. Fauci,

I am writing to inquire about your willingness to address the Society of International Business Fellows (SIBF) as part of our webinar series. SIBF is a distinguished organization of nearly 1600 global executives and senior leaders. Our C-level global membership would appreciate getting your perspectives on the coronavirus outbreak. We are open to topics which could include....What we know and don't know...As business and community leaders what SIBF members can do to prepare and educate their employees...Safety of travel, etc.

We were thinking the webinar could be approximately 30 minutes in length (15 minutes of remarks followed by 15 minutes of Q&A). SIBF's Communications Manager could work with someone on your team to set-up the webinar. SIBF is a non-profit, but we are able to provide a $2k honorarium to you or a charity of your choice.

Thank you for your gracious consideration and attention to our request. It is our sincere hope that you will be able to participate.

Best regards,

Mr. Shannon George Williams | Director of Programs
Society of International Business Fellows (SIBF)

Dear Dr Fauci,

Many thanks for your quick reply and for the clear list of responses regarding the proof. I will review today and will let you know if there are any items needing further discussion.

The current plan is for publication early Friday afternoon. As I mentioned yesterday, there is a new article on Covid-19 that is also scheduled for publication that day, and the Journal editors would like you to mention it in your editorial. I expect to be able to send you a proof of that article sometime today.

Best,
Eli

Dear Dr Fauci,

Attached is the content proof of your editorial. **Please read *ALL* of the following instructions and information carefully before** you begin reviewing your proofs.

First, please **stop and take a moment now** to confirm receipt, so that we can be assured that your proofs did not end up in a spam folder.

Your editorial has been edited for grammar, consistency, readability, adherence to Journal style, and clarity for nonspecialist readers. To expedite publication, we do not ask authors for specific approval of routine changes; please read the entire article to make sure your meaning has been retained. Note that we may be unable to make changes that conflict with Journal style or create grammatical or other problems. Finally, please note that a delayed or incomplete response may delay publication of your editorial.

Please read the entire proof carefully, including all queries. Please return your query replies and proof corrections ****before 12pm (US Eastern) this Friday, February 28, 2020****.

Instructions are provided below. Note that you will be reading for content only; the article will be rendered for print after the content has been finalized.

The Journal's senior medical editors will be reading your article at this stage. If they have any additional comments or queries for you, I will forward them to you in the next few days.

TO ANSWER THE QUERIES: The proof contains in-line numbered query markers and a numbered list of queries at the end. The query markers and the queries are linked, so you can jump back and forth within the file. Please respond to all the queries (see below for instructions; please do ****NOT**** use e-annotation tools) and convey any additional changes as needed.

TO RESPOND BY E-MAIL: If your corrections and your responses to the queries are straightforward, we encourage you to respond by replying to this message. Please copy and paste the list of queries into an e-mail message or a Word document and type your responses there. You may also include a list of changes (e.g., page 1, line 20, change xxx to yyy). Again, please do ****NOT**** use e-annotation tools in the PDF file; the marks are small and easy to miss, which may lead to errors in your article.

Please note that this material is confidential and embargoed until publication. If you have questions about our embargo policy, please contact NEJM Media Relations at 781-434-7847 or at Mediasupport@nejm.org.

Again, please do confirm receipt at this time. Thank you very much for your efforts with these content proofs!

Best,
Eli

Subject: Guidance for users of biologics in the age of Coronavirus.

Dear Nehal,

With the coronavirus bordering on a pandemic and the expectation that it will affect the US at some point, it seems to me we should be prepared to provide guidance to patients who are on immune modulators for inflammatory disease. Specifically, many will wonder if patients should stop their biologic if the virus becomes prevalent in their community. There will also be questions about stopping biologics in the setting of acute infection with coronavirus.

Any thoughts on this? My specific interests relates to patients with psoriasis or psoriatic arthritis on biologics but it's also relevant to patients with IBD, RA and other inflammatory diseases.

Thanks for the note. Milken can help in a number of ways including directly supporting the VRC. Also, as we start looking for Pharma to step up with us, his connections could be helpful.
Tony

On Feb 25, 2020, at 12:58 PM, Collins, Francis (NIH/OD) [E] [redacted] (b) (6)> wrote:

Hi Tony,

I'm sure you know Michael Milken. I've worked with him over many years, and though he is a somewhat controversial figure he has certainly helped NIH in many ways. He reached out to me last night to ask if there is anything he could do to help with the coronavirus vaccine effort. He had seen press reports that finding a pharma partner had been challenging – and wanted to volunteer his help in that regard, since he has deep connections in the private sector. He also said that he'd be glad to help with any philanthropic needs, both through his own resources and his influence over members of the Giving Pledge.

Are there useful actions that I can suggest to him?

Dear Dr Fauci,

My Name is Paul Xin, I'm a journalist from Pengpai News(ThePaper) of Shanghai, which is one of the most important new medai in China. I 'm Sorry to bother you as you must be very busy. I noticed your comment about coronavirus on American media, I deeply hope you could answer few of my questions.Your answers will be very helpful to me. The questions are below.

Thank you very much!

Sincerly,
Paul Xin

———————————————————————

1/You said on CNN that US have had pandemic preparedness plan that developed in preparation for pandemic influenza. Could you provide some details of this plan? **The plan outlines the differences between containment and mitigation. It speaks of the thing that should be done if an outbreak occurs in the USA. Thes inclue social distancing, use of telecommunication and telework, temporarily closing schools, avoiding crowed places such as indoor arenas and theaters.**

2/To prepare for potential communities spread of coronavirus in US, do you think that US need take the measures similar with China? **China was in the "reactive" mode of responding to an explosion of cases in Wuhan City and Hubei province with spread throughout China. China had to resort to very dramatic measures such as shutting down cities. The USA is now in a preparative mode and not a reactive mode and so our response is much different than that of China.**

To: Jon LaPook
Subject: RE: CBS Sunday Morning

Jon:
The message would have to be that the situation continues to evolve and people need to follow the news and the reports from CDC. For example, a few weeks ago if you wanted to travel to Japan or South Korea, it was fine since there were few is any cases there. Now both countries have a travel alert that says "Avoid all but essential travel". You should tell people that travel to places with few or no reported cases is fine. Only when you have community spread (person to person to person) should you be concerned about a specific travel destination. Also, you could explain to people that pandemics evolve when a new infectious disease is spreading by sustained community spread in multiple countries in different regions of the globe. Once a pandemic erupts, it is virtually impossible for any country to be free of cases. People need to understand that. You can mitigate the effects, but you cannot avoid having infections since you cannot shut off the country from the rest of the world. Also, you need to speak of the real and present danger of seasonal influenza every year. Do not let the fear of the unknown (i.e. a pandemic of a new infectious agent) distort your evaluation of the risk of the pandemic to you relative to the risks that you face every day. The only thing that we can do is to prepare as best as possible and do not yield to unreasonable fear.
Best,
Tony

Subject: CBS Sunday Morning

Hi Tony,
I have an unusual opportunity: the executive producer of CBS Sunday Morning has asked me to do a straight to camera shpiel about COVID-19 for this Sunday. I did something similar when people are panicking about Ebola.

You and I have spoken enough about this so that I feel comfortable with the basics. But I would love you to give some thought to whether there are any misunderstandings that you would like cleared up or information you would like disseminated.

I would love to give some logical travel advice. I know there are so many unknowns, but I have had multiple people ask me whether they should cancel their upcoming to trip to ... you name it (Italy, Israel, San Francisco). I know it comes down to risk/benefit, and - as you told me during the Ebola outbreak - people have all sorts of varying levels of comfort with risk. But what do I actually SAY to the 6 million people who will be watching people? :)

Thanks,
Jon

>
> In China, we in the media tend to report the horrors and the lockdown and the government's early lies...
>
> But the truth is that a lot of average Chinese behaved incredibly heroically in the face of the virus: 25,000 doctors and nurses went into Wuhan to help, knowing they might die. Average people gave up their stockpiles of masks so they could be shipped to Wuhan. Neighborhood committees brought food to thousands of little old ladies and checked on them every day, even as they asked them to stay behind their doors for fear of infection.
>
> Meanwhile, in America, people tend to act like selfish pigs interested only in saving themselves. How can I hoard a mask? Where's my vaccine? This morning, I read this appalling article from Alabama. Here you have Americans coming back from a horrifying experience overseas, and the President -- who is popular in Alabama -- asks Alabamans to take some of those fellow Americans in. There is zero risk because they're going to be housed on a naval base.
>
> And yet, the answer is "No! Keep them out!" And their legislators encourage it....
>
> I dunno -- that's the kind of behavior I expect from my fellow New Yorkers, not from Alabama.
>
> If the virus arrives -- and we both know it will -- America is going to have to do better than that. Like the Chinese, Americans are going to have to look out for each other the way we haven't since 9/11. Or maybe since World War II.
>
> But that's not the tone of the HHS briefings. They're an aggressive, defensive, almost smart-alecky "we got this" tone. The only time the tone was right when you

were the third to take the mike and explain things to that kid shouting from the back without a mike about "What's the real message? What do we do?"

Maybe there could be some thought given to mentally preparing Americans to work together in the face of the crisis? Quarantines are a very aggressive approach -- but they require a lot of compassion or the people quarantined suffer.

I might get around to writing an article about this, but my editors keep grabbing me for minute by minute stuff and I'm way behind.

With the urgently required, in order to provide a Navy SEAL like response, I would propose a consulting arrangement where I'm available 24/7, anywhere/anytime, for as long as needed. Please let me know your thoughts.

Here is a brief snapshot of my C.V.

1. SVP, Innovation and Chief Commercial Officer – NantKwest (gene/cell therapies, immunotherapeutics and molecular diagnostics)
2. SVP, Innovation and Chief Commercial Officer – NantHealth (AI/bioinformatics-based multi-omics based molecular diagnostics and neoantigen-based therapeutics)
3. Founder/CEO - Genomic Principles (neoantigen-based, individualized therapeutic vaccines)
4. Founder/CEO Canton Biotechnologies (DNA-based therapeutics and vaccines)
5. Chief Business Officer – Intrexon (gene/protein-based therapeutics and vaccines)
6. Chief Business Officer - Inovio (gene-based therapeutics and vaccines)
7. VP, Business Development – Vical (gene-based therapeutics and vaccines).

I know you are busy and you can feel free to forward this email to the appropriate individual. I can also be reached by cell phone (b)(6) to discuss further.

Best Wishes,

David

Dr. Fauci -

I hope this note finds you well. [redacted] (b) (6) I apologize for the direct out of the blue message, however, my company The Asia Group has a podcast called Tea Leaves and we would be interested in having you as a guest to speak about the Coronavirus. I mentioned to my CEO that you are the leading expert and that I had a connection with you. We would only take about 30-45 mins of your time and would be happy to work around your schedule if this is something that you would be willing to do. Below is a short description of the podcast and a link to our episodes. If able, I'd be happy to coordinate with your assistant.

Looking forward to hearing back soon.

Thanks,
Groslyn "Foster" Burton
Vice President, Culture and Values
Executive Assistant to the Chairman
Dr. Kurt M. Campbell, Chairman and CEO
The Asia Group, LLC

202-350-3285 – Office
(b) (6) – Mobile
202-750-2944 – Fax

he Asia Group announced the launch of Tea Leaves, a new podcast that will focus on the current affairs, foreign policy, business, and arts of Asia. The podcasts' hosts, Dr. Kurt M. Campbell and Ambassador Richard Verma, will lead a series of revealing interviews with policymakers, business leaders, journalists, and artists exploring the most dynamic and consequential region in the world.

In a joint statement, Campbell and Verma said, "We wanted to share our passion for Asia with listeners, both accomplished Asia hands and those with a budding interest in the dynamic region. Our aim is to provide listeners with a greater understanding of the individuals who focus on and live in the region, and how Asia affects our world."

The hosts bring significant experience and expertise to the podcast. Campbell is CEO and Chairman of The Asia Group, and served as Assistant Secretary of State for East Asian & Pacific Affairs from 2009 to 2013. Richard Verma is Vice Chairman and Partner at The Asia Group, and served as the United States Ambassador to India from 2015 to 2017.

The first episode of Tea Leaves is now live on major podcast platforms, including iTunes, Stitcher, and Overcast. Subsequent episodes will be animated by conversations with the movers, doers, and thinkers who are driving today's Indo-Pacific. "We hope that you will subscribe and give our first episode a listen," said Campbell and Verma.

The link to the podcast is available here: https://itunes.apple.com/us/podcast/the-tea-leaves-podcast/id1355207045

Subject: Questions on coronavirus vaccine

Dear Dr Fauci,

Trust this mail finds you well.

I have a few questions regarding the Moderna vaccine, which it would be great to get your input on.

Is it true that trials of the possible vaccine will start in April, but that, even if the first study is positive, the vaccine might not become widely available until next year because of the need for further studies and regulatory clearances?

The company is characterizing this as a vaccine. Strictly speaking, what should it be referred to as?

If you have time for a quick telephone call this morning as soon as you're able that would be great.

Many thanks,
Hanna

Subject: RE:

Zeke:

Ari is also calling me frequently. The virus has adapted itself very well to humans with considerable community transmission (certainly in China) now in other countries such as South Korea, Japan, Iran, Italy, etc. If it continues to spread via multiple generations of human to human transmission, then we will not be able to avoid considerable amounts of infections and spread in the USA. Seasonal influenza has a mortality of 0.1%. The calculated mortality of COVID-19 to about 2.5 %. It is probably lower since the denominator is likely larger than we appreciate due to asymptomatic infections. Even if the mortality goes down to 0.5%, that is still equivalent to a pandemic influenza of 1957 or 1968. In other words, it could be worse than you think.

Subject:

Tony,

Ari is pestering me endlessly. What is your latest update and assessment on coronavirus? I still am having a hard time seeing this as serious as everyone else. Am I blind? Yes very transmissible but low mortality like flu in many ways—the elderly, those with comorbidities, and total impact is likely to be less than flu. Also travel restrictions are delaying but not stopping virus.

Am I missing something big or small?

Thanks

Ezekiel J. Emanuel, M.D., Ph.D.

Dear Dr. Fauci,

Greetings and thank you for all your outstanding scientific and policy leadership regarding the evolving Covid-19 situation.

I am writing to you from South Korea where, as you well know, we are experiencing a very difficult phase of the epidemic. Among the several groups I have been engaged with to address this crisis, I am working with the genome sequencing company, Macrogen, which you may already be familiar with (https://dna.macrogen.com/eng/). Dr. Jeongsun Seo, the Chairman of Macrogen, along with other company leaders and myself have been discussing [redacted] (b) (4)

[redacted] (b) (4)

[redacted] (b) (4)

Barring the institution of any extreme travel restrictions, I am planning to visit the Bethesda area next week (Macrogen U.S. HQ is located in Rockville). I know you are extraordinarily busy but if you (or key colleagues) have time, I and other senior Macrogen colleagues would be happy to discuss the project, its necessary next steps, along with any other matters related to Korea as you wish. [Please note that I do not have any clinical symptoms or signs of Covid-19 nor any relevant contact history.]

Thank you very much for your attention to this matter and I hope that we may have a chance to advance this important project together.

Please take care and thanks again,

Ogan

Subject: NEJM content proof (Fauci)
Importance: High

Dear Dr Fauci,

Attached is the content proof of your editorial. **Please read *ALL* of the following instructions and information carefully before** you begin reviewing your proofs.

First, please **stop and take a moment now** to confirm receipt, so that we can be assured that your proofs did not end up in a spam folder.

Your editorial has been edited for grammar, consistency, readability, adherence to Journal style, and clarity for nonspecialist readers. To expedite publication, we do not ask authors for specific approval of routine changes; please read the entire article to make sure your meaning has been retained. Note that we may be unable to make changes that conflict with Journal style or create grammatical or other problems. Finally, please note that a delayed or incomplete response may delay publication of your editorial.

Please read the entire proof carefully, including all queries. Please return your query replies and proof corrections ****before 12pm (US Eastern) this Friday, February 28, 2020****.

Instructions are provided below. Note that you will be reading for content only; the article will be rendered for print after the content has been finalized.

The Journal's senior medical editors will be reading your article at this stage. If they have any additional comments or queries for you, I will forward them to you in the next few days.

TO ANSWER THE QUERIES: The proof contains in-line numbered query markers and a numbered list of queries at the end. The query markers and the queries are linked, so you can jump back and forth within the file. Please respond to all the queries (see below for instructions; please do ****NOT**** use e-annotation tools) and convey any additional changes as needed.

TO RESPOND BY E-MAIL: If your corrections and your responses to the queries are straightforward, we encourage you to respond by replying to this message. Please copy and paste the list of queries into an e-mail message or a Word document and type your responses there. You may also include a list of changes (e.g., page 1, line 20, change xxx to yyy). Again, please do ****NOT**** use e-annotation tools in the PDF file; the marks are small and easy to miss, which may lead to errors in your article.

Please note that this material is confidential and embargoed until publication. If you have questions about our embargo policy, please contact NEJM Media Relations at 781-434-7847 or at Mediasupport@nejm.org.

Again, please do confirm receipt at this time. Thank you very much for your efforts with these content proofs!

Best,
Eli

Subject: NIAF and coronavirus

Dr. Fauci, I trust this email finds you well. It has been a few years since we've seen one another on the Hill or at a NIAF event but hopefully we will rectify that soon.

I know you have a lot on your plate, especially with the coronavirus, but I am curious if you have five minutes for a call tomorrow so I can introduce you to my boss at BDO, Eric Jia-Soboda (https://www.linkedin.com/in/eric-jia-sobota-02156036/). Eric is an expert in cost accounting for Life Sciences companies and he wants to glean your perspective on the likely structure of the emergency coronavirus budget request so that NIH and others can maximize those research and implementation dollars at the most rapid pace. We would certainly appreciate your time.

My best, Elvis

Good evening,

Please find attached, The Forum welcome document, green room agenda and consent form.
The welcome packet includes information about our production along with what to wear while on camera. The Harvard T.H. Chan School of Public Health consent form is required for production of webcast series.

Please sign and scan a copy of the consent form back by **March 2, 2020.**

We look forward to an exciting event!

Best,
Kristen Dweck

Dear Hillary,
Thanks for your email.
I am indeed looking forward to my NIH visit on Friday, and am still hoping I might get some time with Dr. Fauci, though I can appreciate he might be busier than either of us expected to be back when we first scheduled my interview with him!
Warm regards,
Jason

Hi Jason,

Hope you have/had safe travels to DC this week! I wanted to check in to confirm that you're still planning on coming to visit us at NIH this Friday?

Currently, Dr. Myles is holding 10am and Dr. Belkaid is holding 1:30pm to discuss their microbiome-related research with you. Dr. Fauci's schedule has been very fluid lately due to the coronavirus outbreak—we'll likely need to check in with his assistant Patty Conrad on Thursday to see how his Friday calendar looks (unless you hear otherwise from Patty directly).

Best,
Hillary

Hi Jason,

Great to hear of your interest in microbiome and flu research. Jen and I would be happy to chat about what NIAID may be able to offer in terms of subject matter experts and storylines in those areas.

Might you be available for a short call next week between 4-5pm EST on either Tues., Wed., or Thurs. afternoon – corresponding to 8-9am Melbourne time on Wed., Thurs., or Fri. morning (assuming I've got my time zones correct)? If we can't find a mutually convenient time, happy to continue discussions over email.

Best,
Hillary

Subject: RE: Re:Following up on NIH visit

Hi Anne,
Thanks a lot for your email and your suggestions! After my last visit to NIH (and meeting with Lisa Proctor and Julie Segre years ago), we did the attached story on the gut microbiome. We're very keen to look

at doing a podcast series on the microbiome (skin, gut, other anatomical bits) and how it's informing our views on health, disease and the way we prevent and treat diseases.
It would be cool to workshop this theme with you and your colleagues before my visit, if you have some time?
I cut my teeth in medical science writing on (bird) flu and would be interested in the research Jeffrey Taubenberger's lab is doing, but my understanding (and I could be wrong) is that there's still a lot of work to be done in producing a universal flu

shot. If such vaccine candidates are still years from entering clinical trials, we probably would push that lower down the list.
Hope that helps, and thanks again!
Jason

Hi Jason,

Ahead of your visit, here are a few labs that are doing innovative work and may present interesting backgrounds to become future stories, or inform your reporting. For antimicrobial resistance specifically, Dr. Fauci is your best source. But the below are exciting areas of research at NIAID, and may be a fit for Prognosis. Let me know if any of the below pique your interest and we can share more detail and/or arrange time.

- **Skin microbiome:** NIAID researchers developed a topical therapy for eczema that involves treating skin with "good" bacteria. If proven effective, this strategy could offer an inexpensive treatment that requires less frequent application than many current eczema medications. A Phase 1/2 trial at NIH indicated that this novel therapy is safe, and most participants experienced improvements in their eczema. NIH has exclusively licensed the technology to Forte Biosciences to advance this potential new therapy through further clinical development.

- **Gene therapy**: NIAID is developing and applying gene correction techniques to treat a variety of genetic immune disorders. For example, NIAID scientists co-developed a lentiviral gene therapy to treat infants with X-SCID, a rare and fatal genetic immune deficiency. In clinical trials, the gene therapy successfully restored the immune systems of infants newly diagnosed with X-SCID, as well as older children and young adults with the condition who experienced complex medical problems after receiving standard therapy. Mustang Bio is handling commercial development of the lentiviral gene therapy for X-SCID.

- **Flu:** Dr. Jeffrey Taubenberger is a 1918 influenza expert who sequenced the 1918 pandemic viral genome using archival autopsy specimens from the Armed Forces Institute of

Pathology and frozen lung biopsies from 1918 flu victims interred in permafrost. Learning about 1918 pandemic flu can help us better prepare for and target future pandemic strains. Dr. Taubenberger's lab is developing a so-called universal flu vaccine that includes 4 inactivated influenza viruses and is expected to undergo clinical testing soon. Also, Dr. Matthew Memoli leads NIAID’s influenza challenge studies in which healthy volunteers are purposely exposed to influenza in a carefully controlled environment. Challenge studies offer a unique opportunity to ask focused questions regarding influenza virus pathogenesis and vaccine efficacy in a controlled manner.

- **Mosquitoes:** NIAID’s

Laboratory of Malaria and Vector Research investigates disease-transmitting insects and broad areas of malaria biology and pathogenesis. Dr. Tovi Lehman studies mosquito ecology, covering broad population biology questions relevant to patterns of malaria transmission and vector control. Recently, Dr. Lehman and colleagues in Mali found that a single mosquito can travel up to 200 miles in a single night with the right prevailing wind speed. The research involved collecting flying insects using sticky nets on helium-filled balloons suspended at varying heights.

- **Eating for the immune system**: Dr. Yasmin Belkaid is researching connections between the microbiome, nutrition

, fat, and immunity. This work is early stage, but potentially paradigm-shifting as she uncovers connections between diet and immunity, with implications for using nutrition to boost immune interventions, including vaccines.

- **RSV:** Multiple researchers are working to develop vaccines against respiratory syncytial virus (RSV)—something most parents have heard of, but is not covered by media. RSV usually causes mild cold-like symptoms in healthy adults; however, RSV can be serious, particularly for infants and the elderly. It is the most common cause of bronchiolitis and pneumonia in children younger than 1 in the US. Scientists have spent decades trying to develop an urgently needed safe and

> effective vaccine. One candidate known as DS-Cav1 developed by Dr. Barney Graham's team at NIAID's Vaccine Research Center has shown early promise in a Phase 1 clinical trial.

I'm CCing my public affairs colleagues who liaise with these topics in case there is follow up. Looking forward to hopefully meeting you when you visit.

Thanks,
Anne

Hi Anne,

Thanks for your email and offer to assist with other interviews.

I'm "old school," and see merit in building relationships with researchers and hearing about their work without the expectation of necessarily getting a story.

My interests are pretty eclectic -- from antimicrobial resistance to anesthesia. If there's some interesting stuff happening that hasn't been reported on in much detail that speaks to the future of health care (that could would for our [Prognosis](#) platform), I'd be keen to hear about it.

Many thanks again and happy holidays,

Jason

Madonna's Secret for Longevity Seen Aiding Bacteria Boom: Health

2012-05-08
21:34:07.963 GMT

By Kanoko Matsuyama and Jason Gale

May 9 (Bloomberg) -- The secret to Madonna's staying power may be surprisingly simple: gardening.

What the pop star does involves no trowel or soil. Thanks to dishes of fermented soy beans, millet and brown rice prepared by her personal chef, Mayumi Nishimura, Madonna practices a form of inner horticulture -- cultivating her intestinal flora in a burgeoning alternative approach to health.

Studies of the trillions of bacteria living on and in the body suggest the Material Girl, 53, may be onto something. By eating foods rich in fiber and laced with so-called good bacteria, she may be encouraging helpful microbes to flourish in her bowel, aiding in food digestion and vitamin extraction and possibly staving off diseases from asthma to colon cancer.

"This diet that Madonna is following is very sensible," says David Topping, chief food-nutrition researcher at Australia's Commonwealth Scientific and Industrial Research Organization in Adelaide, who studied gut biology for 25 years.

"The bacteria that live inside you are fulfilling very important functions."

While scientists try to understand the ecology of the bacteria and their interactions with diet and disease, companies are looking for ways to profit.

The health benefits of gut germs have spawned a global market for products that contain friendly bacteria, called probiotics, in the form of tablets or supplements added to foods by companies including Danone, Nestle SA, and Yakult Honsha Co. The market for supplemented dairy products such as Danone's Activia yoghurts and Yakult's fermented drinks, worth $14.7 billion six years ago, will probably expand 32 percent to $33.5 billion by 2016, Euromonitor International estimated last month.

Quinoa, Not Coffee

Studies published in the past year have linked certain bowel-dwelling bacteria to a stronger immune system, while others have been associated with autism and obesity. In one paper published in the journal Nature, scientists showed that a type of white blood cell that produces antibodies only acquired its infection-fighting ability after spending time in the gut.

Nishimura, who has cooked for cancer patients before being hired by Madonna, serves quinoa and other whole grains as staples, along with vegetables and soy sauce, she said in a telephone interview from New York. She also tries to offer seaweed every second day -- usually sautéed or boiled.

“We eat food processed as little as possible,” Nishimura, 55, says of her dietary approach, known as macrobiotic. She doesn’t recommend meat, dairy and coffee. An agent for Madonna didn’t respond to a request for comment.

Whole grains and fiber act as both food and fertilizer to the bacteria in the bowel, according to Mark Morrison, a microbiologist with Australia's CSIRO in Brisbane studying ways to improve gut function and health.

'Terrific Interest'

There are 10 times as many bacteria in the human intestinal tract as there are cells in the body. As coordinator of the Human Microbiome Project, Lita Proctor is helping to organize collaboration from hundreds of scientists around the world trying to map and study microbial communities living on the skin, in the mouth and bowel, and in other parts of the body.

"It's extremely heartening and healthy to have so much attention now paid to the diet," says Proctor, who works at the National Human Genome Institute in Bethesda, Maryland.

Even so, Proctor says the research is still in its infancy, and products based on partial understanding may not deliver what they promise. "That's not holding up the industry," she says. "It's a very fluid, ill-defined area, but with a lot of terrific interest."

Flowers and Weeds

The term probiotic is vague and there's no accepted definition for it. Measuring results may be even more of a grey area and some supplements are destroyed by stomach acid before entering the gut, according to Proctor. Nishimura relies on fermented foods such as miso, soy sauce and tempeh to play the role of probiotics and says the benefits of her diet can be quickly noticed. "I feel better than I did 20 years ago," Madonna wrote in a preface to the cookbook her chef had published in 2010. "I am very grateful to you for this."

The garden analogy is helpful when it comes to describing the complex ecology of the bacteria living on humans, says Julie Segre, the lead investigator working on the skin microbiome at the National Human Genome Research Institute.

"There are some flowers that make it easier for other flowers to grow in the same soil," Segre says. The most important thing is to keep out the invasive weeds, she says.

'Transpoosions'

When the weeds take over, Australian gastroenterologist Thomas Borody has a radical approach to reestablishing the balance of intestinal flora in his patients: he transplants fecal germs from disease-free individuals directly into the upper reach of the colon, in a pouch known as the cecum.

His Sydney clinic has done 1,800 of the procedures, which he jokingly dubs “transpoosions,” over 25 years.

Borody, 62, says the treatment has helped patients with ailments ranging from autism to pseudomembranous colitis, a resilient infection that causes abdominal pain, loose bowel movements and fever.

“The next day their diarrhea stops,” the doctor says.

After the procedure, he asks patients to avoid treatments that may damage their gut flora. Three studies presented at the American College of Gastroenterology’s meeting in October indicate fecal transplants can help with bouts of diarrhea associated with the bacterium Clostridium difficile.

When Weeds Take Over

Keeping inner bugs healthy is crucial because otherwise they risk taking over more than the garden. If intestinal bacteria aren't able to survive on the food their host consumes, the germs will try to feed on what they can find -- "mucus as well as anything else," according to CSIRO's Topping. That may lead to inflammatory bowel disease, a painful condition that can evolve into colon cancer, he says. Staving off disease is one reason people have turned to Nishimura's cooking in the past. The chef, who prepared meals for cancer patients in Boston, says the diet helps with constipation, menstrual pain and body odor. When she first changed the way she ate, Nishimura says she also found that her allergic skin rash improved.

'So Fresh'

Typically, Nishimura tailors her meals each day to suit the way her employer feels, she says, adding that Madonna prefers the chef herself to shop for ingredients. Popular dishes include seaweed in miso soup; hijiki -- a type of brown seaweed -- served with carrots and onions and seasoned with soy sauce; and cooked oats for breakfast, Nishimura says. Whole grains demand harder work for bowel bacteria, which help the body extract vitamins and nutrients from food, because the insoluble fiber they contain is only broken down in the lower reaches of the digestive tract in a fermentation process that delivers different quantities and varieties of inflammation-fighting short-chain fatty acids to the body’s cells.

There is “solid evidence” that microbes play a role in tuning the immune system, says Ian Lipkin, director of the Center for Infection and Immunity at Columbia University’s Mailman School of Public Health, where scientists showed in January that children with autism and gastrointestinal disturbances have a bacterial species not found in non-autistic children with tummy upsets.

Madonna and others making similar diet choices may not know they’re pushing the science frontier. They may just feel better.

“When you cut out animal products, white sugar and coffee for 10 days you start to feel the difference,” Nishimura said.

“When I first began

this diet, I remember how my head became clearer, I woke up earlier and felt so fresh in the morning that I didn't want to stay in bed."

Madonna herself isn't lacking in stamina. Her world tour, which starts in Tel Aviv this month and ends next March, includes 75 concerts in Europe and North America. Her previous world tour was in 2008 and 2009, when she also published six children's books and directed or produced two movies.

Subject: Virus Transmission

Hi Dr. Fauci:

I have been a long time admirer of you in the field of modern medicine. This question I have relates to the current Coronavirus circulating around the world. For many years I have informed people that the ways a virus can be passed from person to person isn't always by a sneeze, cough or by touching someones face with their hands. Has anyone in your medical community thought that if someone were smoking and was an infected person that once they expel the smoke particles into the air that those micro smoke particles may contain viruses that were in the respiratory system of an infected person. Everyone I mention this to don't believe that this is possible. What are your thoughts on this matter? If so why hasn't the medical community warned the public about this possibility as I stay away from all establishments that allow smoking on their premises.

Thank you,

Daniel Gagnon

Table 2

Overview of the evidence on transmission routes of respiratory viruses based on experimental data and the transmission route according to infection prevention guidelines

Virus	Virus family[a]	Transmission route	
		Experimental and observational data	Guidelines[b]
Measles virus	*Paramyxoviridae*	Aerosol [75–77,78*,79*].	Contact [3,110], droplet [3,109–111], aerosol [3,109–111].
Parainfluenza virus	*Paramyxoviridae*	Limited data, contact (by fomite) [83,84] [e].	Contact [3,109–111], droplet [3,109–111], aerosol [3,109].
HMPV	*Pneumoviridae*	Limited data, contact (by fomite)[e] [30]	Contact [3,110,111], droplet [3,110,111].
RSV	*Pneumoviridae*	Contact [89,88], droplet [88], aerosol [90,91**].	Contact [3,109–111], droplet [3,109,110], aerosol [109,111].
HCoV	*Coronaviridae*	Limited data, contact (by fomite) [65–67] [e].	Contact [3,110,111], droplet [3,110,111].
MERS-CoV	*Coronaviridae*	Contact [84] [e] [89] [c] [91**], droplet [89] [c], aerosol [91**].	Contact [111], droplet [3,111]
SARS-CoV	*Coronaviridae*	Contact [70] [e] [73,79,101], droplet [73,78*,79*,117], aerosol [76,118] [c] [82] [c,d].	Contact [3,110,111], droplet [3,110,111], aerosol [3,110,111].
Rhinovirus	*Picornaviridae*	Contact [35,36,42], aerosol [37,40,119].	Contact [109–111], droplet [109,111], aerosol [109–111].
Adenovirus	*Adenoviridae*	Contact [100] [e] [100,101], droplet [103*], aerosol [102,103*].	Contact [3,109–111], droplet [3,109,110], aerosol [110,111].
Influenza virus	*Orthomyxoviridae*	Droplet/aerosol [55,56,57*,59]	Contact [109–111], droplet [3,109–111], aerosol [3,109–111].

[a] Taxonomy was based on [62], airborne transmission is seemingly linked to:
[b] WIP [108], 'Blue Book' [109], 'Red Book' [110], CDC [3] and Up-To-Date [111]. The conclusions on experimental data as presented in this table reflect the conclusions from the authors.
[c] Superspreader events.
[d] Aerosol-generating procedures (in a nosocomial situation).
[e] Conclusions were drawn based on stability experiments.

Dear Emily,

Dear Dr. Fauci,

First of all, I want to thank NIAID and its team for spending time with us going through the Janssen plans for Ad 26 COVID-19 vaccine development.

In follow up of our call earlier today, please find herewith the key action points I noted from our discussion. I would welcome your perspectives/comments, as well as the best way to keep in touch with NIAID.

Looking forward to your feedback,

Best regards,

Johan

Subject: Interview Request from China

Dear Dr. Fauci,

I'm Faye Li, journalist from the Portrait, a national magazine in China. My beat is science and technology. Since the outbreak of the 2019 novel coronavirus (COVID-19) in China, I'm covering feature stories about the outbreak, hoping to explain to readers what it is, especially since the virus is evolving daily at an unexpected high speed, and in so many confusing ways.

Now in China we are getting conflicting information about the new virus and thus become confused about it. For example, we are seeing more and more cases that a patient with negative test results for 2 non-continuous days, still infected with the virus and tested positive afterwards. It makes the treatment really difficult because it seems hard to determine whether the patient is fully cured or not. Since you are an experienced immunologist, I'm wondering if you could share your insights with the Chinese readers and take an interview. The Interview could be via phone or email, whichever works fine for you.

If possible, I'd love to send you the questions before we talk. Since we have time difference, I might not be available during the early afternoon (your time) but I could make it in the morning, noon and maybe late in the afternoon and evening (your time).

I’m sorry for bothering you on this subject, but we face severe difficulty in understanding this new virus and taking measures properly. We have quite limited sources and perspectives for understanding this new virus. However, as a science reporter, I believe in a crisis of public health, the information is the key for the public. They should have the opportunity to hear more perspectives from different specialists. Since you are experienced in fighting against so many viruses, especially SARS, I believe your opinions will be inspiring to the readers.

It would be of great help and great honor for us to invite you for an interview. A phone call interview would be preferred but if time doesn’t work for you, is it possible for you to reply via email? I'll list all the questions in detail.

I could be reached by [redacted] (b) (6) or [redacted] (b) (6) I’m looking forward to your reply.

Best wishes,

Faye

Subject: RE: Call for Dr. Fauci

Hi, Kim –
I spoke to Dr. Jacobs directly. He said that Dr. Michael Lockshin is a good friend/fellow Cornell graduate (Dr. Jacobs also noted he went to Cornell) and gave him Dr. Fauci's number.
Dr. Jacobs and Dr. Alexander Tarakhovsky, a virologist at The Rockefeller Institute, would like to speak to Dr. Fauci about the coronavirus. They have a theory that there may be yeast involved because it is sticky and perhaps it came from the Chinese government. They want to share their ideas and perhaps start a U.S. government effort "similar to The Manhattan Project." They do not want funding.
I thanked Dr. Jacobs for sharing his ideas and stated that I would pass along the message. Should Dr. Fauci wish to speak to them, Dr. Jacobs can be reached at the number below and Dr. Tarakhovsky can be reached at (b) (6)
Please let me know if you have any questions.
Thanks,
Kara

Dear Dr. Fauci,

Thank you for the article, "COVID-19 : Navigating the Unchartered," which the Journal is pleased to accept for publication.

This acceptance is made with the understanding that neither the article itself nor any part of its essential substance, tables or figures has been published or will be submitted for publication elsewhere before it appears in the Journal. The acceptance is also made with the understanding that all the authors, the data, and its presentation meet the requirements as described in the Recommendations for the Conduct, Reporting, Editing and Publication of Scholarly Work in Medical Journals (www.icmje.org).

Please note that the acceptance of your commentary should be considered confidential information to be shared only with your coauthors until its final publication. To ensure that no news reports about the article appear prematurely in any form, do not speak to the media, hold press conferences, or issue news releases about your paper before the week of publication. You must receive an explicit commitment to withhold release of the information until the embargo is lifted at 5:00 p.m. (Eastern Time in the United States) on the day before the date of publication. If there are any questions about this policy, you should discuss them with the Editor.

We assume that financial relationships creating possible conflicts of interest for all authors have been fully disclosed to the Editor, including (but not limited to) any relevant relationships listed in the Open Payments database at https://openpaymentsdata.cms.gov/search/physicians/by-name-and-location for physicians practicing in the United States. For information on what would qualify as a 'relevant' disclosure, please review the instructions on page 1 of your disclosure form.

Authors are reminded that all material published in the Journal is copyrighted by the Massachusetts Medical Society, that by agreeing to have their manuscript published in the Journal they grant to the Society full right and authority to secure copyright for the full term and any renewals or extensions thereof, and that permission for reprinting must be obtained in writing from the Journal.

The Journal will edit your manuscript in accordance with its established style. You will receive a proof of the edited manuscript by e-mail; the proof stage will be your next opportunity to make changes. For important information about production and proofs, see the attached document. In the meantime, please do not make any changes or send any new material to us. Thank you for your contribution to the Journal.

Sincerely yours,

Dear Dr. Fauci,

My name is Ming Lei, a Division Director at the NIGMS. I am writing to you as a private citizen, to thank you for your leadership in yet another public health emergency, and to make myself available to you if you have the time for my in-person observations of the COVID-19 caused quarantine in Hubei Province, China; the evacuation of Americans; and the quarantine in the US.

[redacted] (b) (6) As the virus still roams around, and a possibility of causing a pandemic, I want to let you know that I am willing to share with you my direct observations in case such information is of value in the developing of our responses going forward, which you will undoubtedly playing a critical role.

I will send you a reminder through my NIH email account, in case this message is put into the junk mail folder.

Sincerely,

Ming

Subject: FOR YOUR REVIEW: Draft Rollout, All Staff, and Statement on Preparing for Potential Patients w/ COVID-19
Importance: High

Good evening:

Attached for your review are draft materials to communicate NIH's preparation for potential receipt of patients with COVID-19 to the NIH Clinical Center (timing TBD), including:

1. Rollout plan
2. All staff email
3. Statement

These materials were reviewed by Rick Davey, Tara Palmore, and Courtney Billet. I am developing a list of potential Qs and will work with CC and NIAID folks to develop responses, but I wanted to get these products into review in the interest of time.

Best,
Renate

Tony,

I expect you know Dr. Richard Tubb. He and I worked closely together in the White House 18 years ago. I have a lot of confidence in his judgment, and therefore am forwarding the materials he sent me for your consideration.

I know nothing about the technologies involved, but I know this is a time to write off no good options.

Warm regards,

Steve

Subject: For review by 2:45 PM: Sec. Azar press briefing remarks

Hi all,

Attached is a draft of the Secretary's remarks for this evening's potential press briefing. Some of this is rote/repeated from yesterday or this morning's testimony; I have put the new content in yellow to accelerate review.

Please let me know if you have edits to this by 2:45 PM.

Thank you!

Best,
Patrick

Subject: Fwd: For review by 10:00 AM Weds: Peter Navarro coronavirus op-ed

This is an oped for Peter Navarro. We are asked for comments by 10am Weds.

(Complicating things a little, he was apparently just on with Tucker Carlson stating parts of it verbatim. So, hopefully this is accurate!)

Subject: For review by 10:00 AM Weds: Peter Navarro coronavirus op-ed

Hi all,

Attached is a draft op-ed from the WH's Peter Navarro regarding the administration's coronavirus response – covering PPE, vaccines, therapeutics, and diagnostics.

There is a lot going on here so **we'd like to have edits/recommendations/affirmative clearance from FDA, CDC, NIAID, ASFR, and ASPR.**

Please send edits to me and Tim Foster by 10:00 AM tomorrow (Wednesday). Thank you!

Best,
Patrick

Importance: High

This evening, we were advised by the State of California that 4 passengers from the Diamond Princess tested positive by the CDC for COVID-19.

One individual who tested positive by the CDC had been tested positive in Japan and is already in hospital in CA.

We are developing the following possible Courses of Action as the State of CA cannot absorb these 3 additional asymptomatic individuals:

Subject: Important regarding CoronaVirus

Respected Dr. Anthony

It was great to know about you and your institution, for efforts in combating any emerging infectious disease.

I am writing this email regarding our preliminary observation about the coronavirus genome.

I wish to share with you we have found 12 mirror DNA sequence within the genome of Coronavirus. We have named it (MR1 to MR12). We are highly interested in MR2 as this mirror DNA sequence is absent in the human genome. [redacted] (b) (4)

I wish to add here there are few studies which state that mirror DNA has the potentiality to form H-DNA and later has a potentiality to induce mutations. We strongly believe a future study on mirror DNA can answer " Why some virus mutates faster ?" "Can we stop them from mutating? [redacted] (b) (4)

[redacted] (b) (4) I will be thankful to you, If you can give me your valuable time to discuss telephonically or through skype our ideas. I can be reached at [redacted] (b) (6).

I look forward to hearing from you.

with regards and Best wishes

Dr Vikash Bhardwaj (PhD JNU India)

Subject: COVID-19 clinical care team

Dear Dr. Fauci,

I got a call a few minutes ago from Veronique Nussenblatt, Chief of the Clinical Center ID Consult Service, regarding me being a part of the clinical care team of COVID-19 patients if they come to the NIH.

She did not have any definitive information but said there was a chance patients could be coming from California this week— this is the first I had heard of that, and I'm guessing you may know more about it than I do.

The work would include either day or night shifts, likely a couple a week. People on the clinical care team are not instructed to separate themselves from others and will be pcr tested for the virus daily when working clinically.

I wanted to ask for your OK to do this clinical work— of course I will maintain my responsibilities in the office while doing so. Please let me know and happy to discuss further if you'd like.

Sincerely,
Andrea

Subject: Flip Cards

I have gone over the Flip cards. I note that we have only 2 cards for Coronavirus. I want to have a separate flip folder for coronavirus with a full set of cards for the specific coronavirus hearings that are coming up. You should sit down with me and also work with Hilary to prepare this set of cards. They should contain all the current epi as well as the dollar numbers for the proposed supplemental budget that we are putting together – I will get asked about that and I have clearance from the department to talk about it. Also, I want a set of cards for what we are doing in the area of research, i.e. basic research (eg animal models, etc.), diagnostics, therapeutics (remdesivir trials in China, Japan, and Nebraska), and the whole menu of vaccines. In other words, I want an entire set of cards for coronavirus. That is what I am going to get asked in both the coronavirus hearings as well as in the NIH Appropriations hearings.

Thanks, Tony.
I would love you to consider my request to "tag along" with you some day - not to join you for meetings (I would wait outside unless invited in) or listen in on conference calls but to chat with you in between to give people an inside look at how seriously the government is taking the outbreak. And I could bring down a shmear from Barney Greengrass for lunch. How could you pass that up???

Jon:

The current appearance of community transmissions in Japan, South Korea, Italy and Iran is troublesome. As I have repeatedly said over the past couple of weeks, if and when (looks more like when now) a number of other countries besides China have sustained human to human transmissions, then we will be on the brink of a pandemic, if not already there. The reason to say this is that when several countries have widespread transmissions, then spill-over to other countries is inevitable since one cannot shut out the rest of the world and so you can expect increasing world-wide transmissions among progressively more countries. In essence, you will be experiencing a pandemic. We are not quite there yet, but we are getting disturbingly close. It will soon be a matter of semantics regarding who would be willing to call it since it is not a mathematically precise definition. I am not so sure that WHO will have the will to declare this a "pandemic" before a number of respected epidemiologists around the world start referring publicly to it as a pandemic regardless of what WHO does or does not declare. WHO will likely be behind the curve here and will wait until it is patently obvious what we are dealing with.

Hope that this is helpful.

Best,

Tony

Hi Tony,

Why do I not think that this is a relaxing Sunday for you?

This definitely feels like an inflection point in the coronavirus outbreak - both in the unsurprising way it's spreading and the equally unsurprising misinformation and public alarm/panic we are seeing. Unsurprising but here we are. Can you give me a quick brain dump on where you think we are and how I can best inform the public?

Thanks,

Jon

P.S. please let me know whenever I can report that the outbreak is officially being called a pandemic.

Subject: RE: 2020.02.23 Sunday

Dick:

Transmission is definitely by respiratory droplet. Still unclear about aerosol transmission although there are anecdotal reports that this occurs similar to what we saw in individual episodes with SARS back in 2002-2003. Almost certainly contact transmission occurs with hand to mucosa (mouth, eyes, nasal mucosa). Unclear about fomites, doorknobs, etc. Virus can live for a couple of hours on certain inanimate objects. Virus definitely isolated from stool and urine, but not sure of role in transmission. No information about Transmission to fetus. Children have very low rate of infection. No good serologic test at this point although they are rapidly being developed.

Subject: Re: 2020.02.23 Sunday

Thanks, Tony. Please continue communication with me by email. But rest your voice for a short whlle.

I am having trouble understanding the exact mode of transmission of COVID-19.

-Sneeze or cough produces respiratory droplet or aerosolized respiratory secretion which make contract with upper or lower respiratory mucosa, which results in infection of human cells. Seems most likely.
- What about contact transmission, contaminated hand to conjunctivae, nasal mucosa, or mouth
- Fecal/oral
- transmission to fetus
-What are the diagnostic tests to confirm diagnosis of novel coronavirus? PCR of secretions? Who in the world has these test kit; who manufactures kit.
-Are follow up serologies begin done?

Interesting questions to us and to Shelly Wolf if he were with us.

Thanks, Tony. My voice is also a little raspy.

Best,
Dick

Dear Dr. Fauci,

Thank you very much for speaking to us at the 43rd Annual KAMA Convention. It was a tremendous privilege for all of us. You were also so kind to stay afterwards to take pictures with all those who asked.

To be honest, having you there was very surreal. You symbolize the best of American medicine. I grew up idolizing your accomplishments as college and medical student. You saved and touched the lives of so many around the world. It is still hard to believe that I had this special opportunity to welcome you.

We will continue to do our best to serve the public and mentor medical students. I hope you can speak to us again in the near future. Thank you very much. I hope you continue in your position for another 40 years.

Warmest regards,

John H. Won

Dear Dr. Fauci,

Just over a week ago we talked for this story about how the outbreak is likely larger than we know now:

https://www.google.com/amp/s/www.vox.com/platform/amp/2020/2/14/21134473/coronavirus-outbreak-singapore-us-symptoms-pandemic

Given the developments in Singapore, Iran, Italy, and on the Diamond Princess cruise ship, I'm just wondering how your opinion about the possibility of containment and how fast we are approaching a pandemic has changed. Do these developments suggest we've entered a new phase in the outbreak?

If you have a few minutes to chat or email today, let me know. We'll be aiming to run a story on this today.

Thank you for considering.

Julia

Subject: RE: Covid-19 question

Ted:

Thanks for the note. Since she is 22 days out of Singapore she would be well beyond the 14 day quarantine used for people who are coming out of risk zones. And so although her risk is never zero, it is really very low. If she were coming from Japan or South Korea, which are experiencing an emerging outbreak, I might feel a little different, but Singapore has good infection control despite the number of cases in that country Given her history of recent Shingrix vaccination, I would wait another day to see if her fever breaks. I agree that I would keep her at home for now. I do not think it would come to that, but if you want to get testing done, it still would have to go to the CDC via the Virginia department of health. Bottom line is that I would sit tight for now and see how she does over the next day or so. If things change, do not hesitate to call or e-mail me.

Best,
Tony

Subject: Covid-19 question

Hi Tony,

The wife of one of my patients received the Shingrix vaccine on Thursday 2/20 and developed fever to 101.4 the following day with malaise, headache, mild nausea (no respiratory symptoms). She's taken ibuprofen with transient temperature reduction; the fever and symptoms are the same today.

BUT . . . she and her daughter were in Singapore (b) (6) where they stayed at the (b) (6), visited (b) (6) and the (b) (6). They then flew to Colombo, Sri Lanka before returning via Europe last (b) (6) to (b) (6).. So her fever began 3 weeks plus 1 day after being in Singapore.

I've told her to keep treating the fever and symptoms but to stay at home for now. The fever after Shingrix usually resolves after 2-3 days so I'd expect it to abate today or tomorrow. My question is whether there's enough of a concern, viz. the time in Singapore, for her to be tested for covid-19. If so, what's the best way to conduct the testing? Or is it okay to see if her fever breaks by tomorrow?

(You must be getting lots of these questions).

Best,
Ted

Subject: Coronavirus

To: Dr. Fauci

FM: Oliver B Roberts

[redacted] (b) (6)

Dr. Fauci; I attended a small water seminar, put on by local (Seventh Day Adventist) medical professionals, in the mid 1970's at Elms Haven, California.

This seminar taught the participants how to eliminate the flu with the use of water treatments, ie (steam baths, etc).

I have now for these past 40 some-odd years, been taking two treatment's; one in the evening and another in the middle of the night, whenever I have contacted the flu: AND have had the facilities to do so; and each time I was well the next morning. No temperature, no symptoms whatsoever.

With the high rate that this Coronavirus is spreading, one can see what a great tool these treatments can be for medical professionals. To have those who are sick with the flu, completely free of all symptoms after two treatments would greatly ease the burden on Dr's and other medical professionals AND each facility.

Dr. I am asking for a few minutes of your time to explain this. I would like to share this with you and others. I just want to help by sharing what I learned and have been doing all these years. I feel so guilty, knowing this and not having a way to get this information to those needing it, when there so many out there sick and dying.

Note: I have been trying to reach out, hoping someone will hear me. Alas I do not have the education, pedigree nor the contacts: But you Dr. have all three! I ask not that you believe in me, but that you believe in these treatments.

Thank You for your time, please feel free to contact me via email or by phone or text or even have someone up here talk with me.

Sincerely;

OB Roberts
(Ben)

Hi Tony,

I know how busy you are but I wanted to give you a brief update on the Annual Conference of the Consortium of Universities for Global Health (CUGH) based in Washington, DC. Here is the link to the overall CUGH meeting which provides an overview of the whole conference https://www.cugh2020.org/program. As we discussed months ago you agreed to be in the opening day plenary session on April 18th, entitled "Emerging Infectious Diseases and their Impact on Global Health Security". **The details and other speakers are listed below**. I may try to organize a call of all speakers in a month to coordinate talks/topics as the session is 90 minutes with 5 speakers, and a lot of ground to cover, especially with the COVID19 outbreak.

Judy Wasserheit, copied here, would also like to invite you to a special session she is organizing on the coronavirus epidemic at the same CUGH conference in a late-breaker session on Sunday, April 19 (the second day of the conference) from 8:45am-10:15am at the Washington Hilton Hotel (Monroe Room). This talk would be slightly different from the plenary session and you could expand on **COVID19 research priorities and update on progress**. We realize your schedule is very busy but your insights and knowledge on both of these topics is unparalleled. If you cannot speak at the second session we would appreciate your recommendation as to an alternative who could address this latter topic.

Thanks and all the best,
Tom

Plenary Session Details:

Session Day: Saturday, April 18, 2020
Session Time: 11:30am-1:00pm
Location: Washington Hilton Hotel, International Ballroom
Panel Title: ”Emerging Infectious Diseases and their Impact on Global Health Security”

Short Panel Description: This Plenary Panel will highlight the continual threats of emerging and re-emerging infectious diseases, and their impact on global security for surveillance, detection, treatment and prevention of these diseases. Over recent decades, multiple epidemic events have underscored how highly vulnerable we are to viral threats. Our world is globally connected—and an "emerging threat" in one part of the world can pose a threat everywhere and to everyone. About 75 percent of new human diseases are caused by microbes that originate in animals. These include HIV, influenza (including pandemic H1N1, H5N1, and H7N9), Severe Acute Respiratory Syndrome (SARS), Middle East Respiratory Syndrome-Coronavirus (MERS-CoV), Ebola, Marburg, and Nipah. The recent emergence of COVID from China clearly illustrates the magnitude, rapidity and impact that a new infectious agent can have on global health security. This panel of leading experts will discuss the emergence of these microbial threats, and our ability to detect, respond and prevent future epidemics of these pathogens.

Moderator(s) Info: Tom Quinn, Chief, NIAID, International HIV/STD Section and Man Charurat, Director, Division of Epidemiology and Prevention, Institute of Human Virology (IHV)

Speaker(s) Info:

1. Anthony Fauci, Director, NIAID
2. Chikwe Ihekweazu, Director General, Nigeria CDC
3. Peter Hotez, Dean, National School of Tropical Medicine, Baylor College of Medicine
4. Jonna Mazet, Executive Director, One Health Institute, and PI, PREDICT project, UC Davis
5. Jennifer Nuzzo, Senior Scholar, Center for Health Security, Johns Hopkins University

Subject: FOR ASF REVIEW: Draft PR re: launch of remdesivir COVID-19 trial

Hi Dr. Fauci,

Please find attached for your review a draft press release to announce the launch of the remdesivir COVID-19 treatment trial, which enrolled its first patient today. It's been reviewed by the following individuals/groups:

- FOG
- OCGR (Kathy Stover, Courtney Billet)
- DMID: Emily Erbelding, John Beigel
- DCR: Cliff Lane, Libby Higgs
- U Nebraska (Christopher Kratochvil, Andre Kalil, comms dept)
- Awaiting comments from Gilead and WHO.

For ease of reference, the following is the quote we have drafted for your use:

(b) (5)

[redacted]

Thanks much,
Kathy

Subject: interview request: draft responses for Greek newspaper

Reporter: Theodora Tsoli
Organization: Greek newspaper To VIMA (www.tovima.gr)
Phone #(s): [redacted] (b) (6), thtsoli@tovima.gr
Subject: COVID-19
Deadline: Monday 2/24

The reporter emailed questions for ASF. I have drafted proposed responses for his review, also attached.

1. **Do you believe that SARS-COV2 is capable of causing a pandemic? Are you expecting many secondary transmissions of the virus outside China?**
   A pandemic is generally defined as sustained transmission of a new pathogen in multiple regions of the world. COVID-19 does not yet meet that definition, and I hope that China and other countries in Asia with some transmission are able to contain the outbreak. However, it is possible that COVID-19 could become a pandemic. It would not be surprising to see additional secondary transmissions of the virus outside of China.

2. **Chinese authorities are reporting a decline of new cases. Could we say that the virus has peaked and maybe it will slow down? When are you expecting to have a clearer picture about the evolution of this epidemic?**
   Although the number of **daily** cases in China appears to have gone down, it is too early to tell if this is really a decline in the outbreak.

3. **Could the virus become endemic and give seasonal outbreaks?**
   If China is not able to contain the outbreak, it is possible COVID-19 could become endemic and lead to seasonal outbreaks. However, it is too early to know the likelihood of this scenario.

4. **What about its transmissibility? Some experts say that WHO is underestimating it's transmissibility. Could the reality be different maybe because, among other things, many cases stay undetected?**
   Because of the many unknowns about SARS-CoV-2, it is difficult to make any firm conclusions regarding overall transmissibility and severity. However, it appears to be much more transmissible than SARS. Also, there are likely asymptomatic COVID-19 infections that are not getting counted because people do not go to the doctor for testing or treatment if they are not sick.

5. **Do you believe that the measures taken by China and countries around the world are adequate to stop SARS-COV2 spread? There is a lot of discussion about thermal cameras and travel restrictions for example.**
   China has taken extreme measures to control the outbreak. Restricting the movement of 50 million people is unprecedented. However, it might ultimately have an effect on slowing transmission. Precautions implemented in the U.S. are not intended to detect every person with COVID-19 entering the country. However, our approach has allowed us time to better plan and prepare our health system.

6. **What is the key to stop the worldwide spread of the virus?**
   Though we have mobilized a rapid research response to quickly develop effective countermeasures, right now, the outbreak response remains focused on the proven public health practices of identifying cases, isolating patients and tracing contacts.

7. **In the northern hemisphere we have a flu outbreak - in Greece as well. Some experts say that this is the real danger and not the coronavirus. What is your view?**
   I am always concerned about influenza. Every flu season, millions of people are at risk of getting very sick or dying. Currently people in the U.S. and most countries in the northern hemisphere are at a much higher risk of being exposed to influenza than SARS-CoV-2. However, the COVID-19 outbreak is an evolving situation and we are treating it as a very serious public health threat.

8. **Many efforts are being in process for the development of a vaccine for the new coronavirus. Are you coordinating any of them and which ones? Are there any efforts more promising than others? Which platforms of vaccine development are more promising? When do you believe that we could have a vaccine available for clinical trials and then for human use?**
   NIAID is exploring multiple candidates and is on track to test an experimental messenger RNA (mRNA) vaccine in a Phase 1 clinical trial this spring. This first phase of clinical testing will involve giving the vaccine to healthy adults in the United States to see if it is safe and if it can induce an immune response in recipients. It is important to realize that the development of investigational vaccines and the clinical testing to establish their safety and effectiveness takes time. A vaccine against the novel coronavirus will likely not be widely available for **more than** a year.

9. **What about therapies? Dozens are being tried - from plasma to herbal medicines in China. Which are the most promising?**
   NIAID is pursuing the development of antivirals and monoclonal antibodies for potential use against COVID-19. NIAID is preparing protocols for *in vitro* and *in vivo* studies of the antiviral remdesivir, which has shown promise against other coronaviruses in animal models. NIAID also plans to evaluate Kaletra (lopinavir/ritonavir) and interferon-beta for their activity against SARS-CoV-2. In addition, NIAID scientists are working to identify monoclonal antibodies with

therapeutic potential from stored SARS patient samples as well as COVID-19 patient samples.

10. **Are the things we know about this new virus more than the ones we don't know? Which are the main questions about it that remain to be answered?**
    New data **are** published about SARS-CoV-2 every day. However, we still have a lot to learn. For example, we do not know why there are **so few cases among** children, which is uncommon for a respiratory virus.

11. **How worried should people outside China be about SARS-COV2? What is the biggest danger from this virus?**
    . The risk to the general American public remains low at this time**; however, this could change and that is why we are treating the emergence of a novel coronavirus as a very serious public health threat**. We understand that people may be worried. We ask that people not let fear or panic guide their actions.

12. **Which are the protective measures anyone should take against the new virus? Do masks work?**
    The vast majority of people outside of China do not need to wear a mask. A mask is more appropriate for someone who is infected than for people trying to protect against infection.

HHS Engages Sanofi's Recombinant Technology for 2019 Novel Coronavirus Vaccine

Racing to develop a vaccine against the 2019 novel coronavirus, the U.S. Department of Health and Human Services' Office of the Assistant Secretary for Preparedness and Response has engaged Sanofi Pasteur, the vaccines global business unit of Sanofi.

The Biomedical Advanced Research and Development Authority (BARDA), a component of ASPR, will provide expertise and reallocated funds to support the vaccine's development. Sanofi will use its egg-free, recombinant DNA platform to produce a recombinant 2019 novel coronavirus vaccine candidate.

The technology produces an exact genetic match to proteins of the virus. The protein's DNA will be combined with DNA from a virus harmless to humans, and used to rapidly produce large quantities of antigen which stimulate the immune system to protect against the virus. The antigens will be separated and collected from these cells and purified to create working stocks of vaccine for advanced development.

"Flexibility and scalability are cornerstones of rapid response to an emerging infectious disease," said BARDA Director Rick A. Bright, Ph.D. "Using this proven technology, we can pivot immediately to address this new global health threat. Our goal is a licensed vaccine to provide long-term health security against this latest virus and prevent future coronavirus outbreaks."

BARDA has worked with Sanofi since 2004 and in 2009 began collaborating with Protein Sciences of Meridian, Connecticut, now owned by Sanofi, to develop a recombinant technology with the flexibility to make millions of doses of vaccine quickly in an influenza pandemic. In 2016, BARDA added this vaccine to the U.S. National Pre-pandemic Influenza Vaccine Stockpile. When Sanofi purchased the company and its technology in 2017, BARDA continued working with Sanofi on pandemic vaccine development, and in December 2019 the partners began focusing on increasing manufacturing capacity for recombinant influenza vaccine in the United States, in accordance with a presidential executive order to enhance national security and the public health by modernizing influenza vaccines and technologies.

This expanded collaboration with Sanofi is BARDA's second program to focus on developing a novel coronavirus vaccine candidate in the past few weeks. There is currently no approved vaccine, treatment, or diagnostic for novel coronavirus infections; however, the U.S. Food and Drug Administration has issued an emergency use authorization (EUA) to enable emergency use of a diagnostic test developed by the Centers for Disease Control and Prevention.

BARDA also is working with counterparts across the government, including within HHS and with the Department of Defense. The team is reviewing potential vaccines, treatments and diagnostics from across the public and private sectors, particularly products in development for Middle East Respiratory Syndrome (MERS) or Severe Acute Respiratory Syndrome (SARS), to identify promising candidates for development and licensure to detect, protect against or treat novel coronavirus infections.

To obtain information about any potential products in development in the private sector that could be used in responding to the novel coronavirus outbreak, the U.S. government launched a single point-of-entry website for innovators and product developers to submit brief descriptions of their diagnostics, therapeutics, vaccines, and other products or technologies relevant to this new virus.

Federal agencies are particularly interested in identifying products and technologies that have progressed into or beyond non-clinical studies, have established large-scale commercial Good Manufacturing Practices (cGMP) manufacturing capability, and/or have utilized a platform already approved by the U.S. Food and Drug Administration (FDA).

BARDA also opened an easy broad agency announcement, an EZ-BAA, specific to diagnostics that utilize platforms already cleared by the FDA, with a viable plan to meet requirements for the FDA to consider Emergency Use Authorization (EUA) within 12 weeks of an award.

About HHS, ASPR, and BARDA

HHS works to enhance and protect the health and well-being of all Americans, providing for effective health and human services and fostering advances in medicine, public health, and social services. The mission of ASPR is to save lives and protect Americans from 21st century health security threats. Within ASPR, BARDA invests in innovation, advanced research and development, acquisition, and manufacturing of medical countermeasures – vaccines, drugs, therapeutics, diagnostic tools, and non-pharmaceutical products needed to combat health security threats. To date, 54 BARDA-supported products have achieved regulatory approval, licensure or clearance. BARDA DRIVe brings together the best ideas from the medical and scientific communities, together with government and venture capital investment, to drive innovation that will strengthen our nation's health security. To learn more about preparing for and responding to public health emergencies, from new infectious diseases to natural disasters and bioterrorism, by visiting the HHS public health emergency website, www.phe.gov. For more information on partnering with BARDA on developing medical countermeasures, visit www.medicalcountermeasures.gov, and for more on DRIVe, visit drive.hhs.gov.

Tony

Good afternoon.

Just wanted to write and say how much I deeply appreciate your on-going public service; you've made extraordinary contributions over the course of your career and, as I've watched you on TV in the context of the current public health threat of the coronavirus, I know you're continuing to do so...

No need to respond; you have a lot going on.

From one citizen and a former colleague, extending my thanks and deep appreciation.

Best wishes.

Kevin Thurm

Subject: For review: ASM presentation for 26Feb2020

Dr. Fauci,
Attached is the presentation to the American Society for Microbiology (ASM) Public and Scientific Affairs Committee on Wednesday Feb 26th.

The topics they have expressed interest in are:

- NIAID Budget Request FY2021
- Novel Coronavirus
- Progress on a Universal Flu Vaccine

The talk is 30 minutes plus 15-20 for discussion.

I've scheduled 30 minutes Monday morning at 10AM to review the slides with you as well.

The presentation has been uploaded to the shared drive. As indicated we will update the necessary slides on Monday afternoon before sending them to ASM on Tuesday.

Thanks,
Johanna

Subject: CoVid-19 In Infants

Dr. Fauci,

Infants and children infected with CoVid-19 seem to be an anomaly. Could it be as simple as childhood vaccinations? Are Chinese children vaccinated with anti malarial drugs such as Chloroquine phosphate, which is proving effective in older patients for CoVid-19?

If infants and children are not getting severe infections, why?

Dear CROI Speakers and Moderators:

We would like to schedule a planning call for next week to COVID-19 session at the 2020 Conference on Retroviruses and Opportunistic Infections (CROI). Please submit your availability using the poll at http://whenisgood.net/ksy42az. The poll should automatically adjust to your local time zone, but you can adjust the setting using the "Select your location" dropdown if needed.

We will confirm the call as soon as possible.

Importance: High

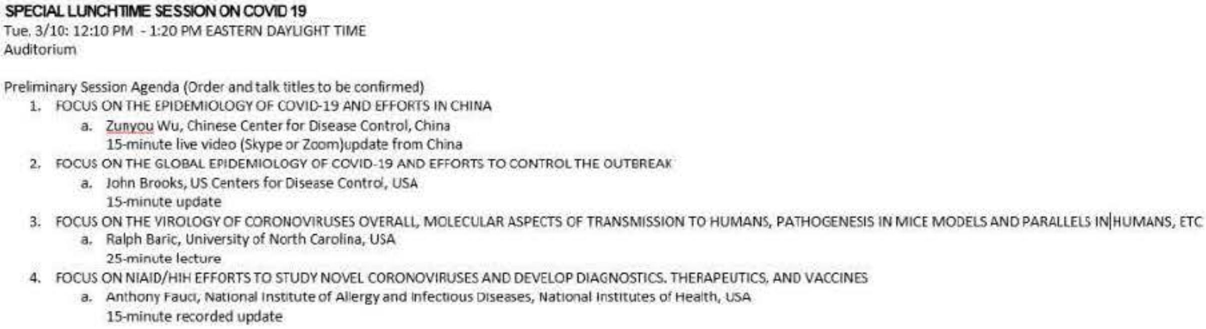
Dear Drs Wu, Brooks, Baric, and Fauci:

It is more than incredibly impressive at how all of you, in just the past few days, have rearranged your schedules and agreed to participate in this special session in only about 2 weeks. We are all very grateful, and know this will be tremendously impactful for the CROI audience.

Below is the final list of presentations, although the order and titles may well change. We are hoping to have a conference call with the session liaisons and speakers next week if possible, to go over each of the talks to address the overall plan and discuss any overlap. Shortly we will send out a poll for availability for early morning in China, early-mid afternoon in the US West Coast, and late afternoon-evening in the US East Coast. If you can respond to the poll by Monday we would greatly appreciate it; things are moving quickly.

Many thanks again,

All of us at CROI!



SPECIAL LUNCHTIME SESSION ON COVID 19
Tue. 3/10: 12:10 PM - 1:20 PM EASTERN DAYLIGHT TIME
Auditorium

Preliminary Session Agenda (Order and talk titles to be confirmed)

1. FOCUS ON THE EPIDEMIOLOGY OF COVID-19 AND EFFORTS IN CHINA
   a. Zunyou Wu, Chinese Center for Disease Control, China
   15-minute live video (Skype or Zoom)update from China
2. FOCUS ON THE GLOBAL EPIDEMIOLOGY OF COVID-19 AND EFFORTS TO CONTROL THE OUTBREAK
   a. John Brooks, US Centers for Disease Control, USA
   15-minute update
3. FOCUS ON THE VIROLOGY OF CORONOVIRUSES OVERALL, MOLECULAR ASPECTS OF TRANSMISSION TO HUMANS, PATHOGENESIS IN MICE MODELS AND PARALLELS IN HUMANS, ETC
   a. Ralph Baric, University of North Carolina, USA
   25-minute lecture
4. FOCUS ON NIAID/HIH EFFORTS TO STUDY NOVEL CORONOVIRUSES AND DEVELOP DIAGNOSTICS. THERAPEUTICS, AND VACCINES
   a. Anthony Fauci, National Institute of Allergy and Infectious Diseases, National Institutes of Health, USA
   15-minute recorded update

Tony, my condominium community has established a program in which prominent members of the Washington area are invited to make presentations on subjects of great public interest. Shown in the email below is a description of this program. In this regard I have been asked to contact you to see, recognizing your incredibly busy schedule, if you would be interested and able to provide an update on the Coronavirus situation to our residents. Most likely you [redacted] (b) (6) If you have a potential interest in sharing your great expertise on this subject with our residents could you please have your staff contact Emily Lane who is copied on this email to explore possible dates and times that would work for you. Thank you so much for your consideration of this request. Ken

On 2/21/20, 3:36 PM, "Emily Lane" <ELane@[redacted] (b) (6) wrote:

Dear Ken,

The [redacted] (b) (6) Committee greatly appreciates your willingness to approach Dr. Anthony Fauci on our behalf, asking him to address the residents of the [redacted] (b) (6) on the Coronavirus. It would perhaps be helpful to Dr.Fauci, to explain who we are and what we do. [redacted] (b) (6), (b) (6)

The [redacted] (b) (6) Committee was formed recently to create and organize events to educate, enlighten and entertain members of the Somerset community. A few weeks ago [redacted] (b) (6) spoke to a sold out crowd on impeachment. We've featured authors on a variety of topics; invited doctors with specialties of interest to our community organized trips to the Kennedy Center and theaters for attendance at ballets and plays and sponsored visits, led by experts, to various museums and the Library of Congress to view special exhibitions. An example of the latter is a tour of the Folger Library [redacted] (b) (6). A presentation by Dr. Fauci on the coronavirus would be of great interest to our constituency who keep informed by reading both national and international journals. We are flexible on the date for such an appearance needing only a few days' notice to inform our residents.

I need not tell you that it would our great honor to welcome Dr. Fauci to the [redacted] (b) (6).

Sincerely

(b) (6)

Subject: hi and request for Dr. Fauci this weekend on MSNBC
Importance: High

Patricia, hi, I hope all is well with you.
Is Dr. Fauci available this weekend to be on MSNBC to discuss the latest re Corona virus - https://www.washingtonpost.com/health/coronavirus-diamond-princess-cruise-americans/2020/02/20/b6f54cae-5279-11ea-b119-4faabac6674f_story.html

We'd like him on either on Saturday, in the 7:30am to 8am half hour, with Kendis Gibson/Cori Coffin, or on Sunday in the 12pm or 1pm hour with Alex Witt. Whatever day/hour that is good for him, we'll make work.

Thank you so much for your help in this matter.

All the best,

Shannah

Subject: So what do you guys think ? (I no it's not influenza, but a lot of your 2007 conclusions seem very valid now...)

Dear David Morens, dear Anthony Fauci,

I realise it is not an influenza virus, but the outlook of your 2007 paper ("The 1918 Influenza Pandemic: Insights for the 21st Century") seems to me to be very valid for the current coronavirus outbreak. Or put differently - your statements and concerns from then mostly coincide with my thinking and worries now... :(.

So a question - what is your thinking now? Are the hospitals you're affiliated with hiring additional staff (yet)? Any personal preparations?

Good luck to you and all the best for those close to you, kind regards, Sean Scherer

P.S. I guess part of the the reason I'm asking is, because I (a non-institutionally affiliated biologist), am in touch with the university-hospital here ([redacted] (b) (6) Germany), but my concerns are so far falling on deaf ears... But also just reading the paper and seeing others come to the same conclusions - albeit on more theoretical grounds and multiple years ago - made me want to reach out. Plus I guess I'm simply curious about what you think !

Donna:

Thanks for the note. I will be able to provide a 15 minute video with slides that discusses the NIH/NIAID efforts to study the novel coronavirus and to develop countermeasures in the form of diagnostics, therapeutics, and vaccines. Your team can work with Patty Conrad, Hilary Marston and Greg Folkers on the logistics. In the meantime, we will prepare the video.

Best regards,

Tony

Subject: RE: CROI COVID 19 Session; Tuesday March 10 lunch
Importance: High

Dear Dr Fauci:

We've had a lot of discussion around our COVID-19 session today. An idea that came up was possibly having you do something remotely. Either a live feed in from your office at approximately 1:05 PM to 1:20 PM EDT on Tuesday, March 10 if you have that time available, or have you send in a video recorded presentation a day or 2 before that we can show at the session. Having some way to communicate the high priority NIH/NIAID has on developing a vaccine and treatment would help bring the content together.

We know this is likely not possible, with the very short notice and your even more tremendously busy schedule around all of this. But it's worth the ask.

Please let me know if you think either of these is possible. And Patty, sorry for butchering your email address earlier.

Best,

Donna

Subject: RE: CROI COVID 19 Session; Tuesday March 10 lunch

Dear Dr Fauci:

As I mentioned on the phone, we just today decided that we will have a special session on COVID 19 at CROI. It will be on Tuesday, March 10, during the lunch break; the initial general structure will be a 10- to 15- minute overview (CDC), a 25-min talk by Ralph Barac (UNC) about the virology of coronaviruses, and a 10- to 15-minute summary on what NIAID/NIH is doing and planning. We thought that this being one of the first large medical conferences in infectious diseases this year, that we address COVID 19 at CROI

We know that this is terribly last minute, but the CROI Chairs and Foundation are hoping you are free to give the NIAID/NIH update. CROI is in Boston, March 8 to 11.

If you think you would be able to do this, we will send a more formal communication with details and work with Patty on the specifics. Thank you so much Dr Fauci; we hope you will be able to join us.

Best,

Donna

Subject: Re: question re the WashPost story

Now that I've had a chance to read the whole story -- after editors finished whirling -- I see it also contains these grafs:

Are they accurate?

Thanks

During one call, the CDC's principal deputy director, **Anne Schuchat**, argued against taking the infected Americans on the plane, according to two participants. She noted the U.S. government had already told passengers they would not be evacuated with anyone who was infected or showed symptoms. She was also concerned about infection control. **Anthony Fauci**, head of the National Institute of Allergy and Infectious Diseases, who was also on the calls, **recalled** saying her points were valid and should be considered. But **Robert Kadlec**, assistant secretary for preparedness and response for the Department of Health and Human Services and a member of the coronavirus task force, pushed back: Officials had already prepared the plane to handle passengers who might develop symptoms on the long flight, he argued. The two Boeing 747s had 18 seats cordoned off with 10-foot-high plastic on all four sides. Infectious disease doctors would also be onboard.

On Thu, Feb 20, 2020 at 4:24 PM McNeil Jr, Donald G <mcneil@nytimes.com> wrote:

> Hi, Tony:
>
> The Washington Post has just put up a story saying that the 14 infected passengers on the buses containing 238 American passengers from the Diamond Princess were flown home AGAINST the CDC's advice. And that the States Department overruled the CDC on this.
>
> Can you confirm whether that's true?

Thanks...
Donald

Story contains these crucial grafs:

In Washington, where it was still Sunday afternoon, a fierce debate broke out: The State Department and a top Trump administration health official wanted to forge ahead. The infected passengers had no symptoms and could be segregated on the plane in a plastic-lined enclosure. But officials at the Centers for Disease Control and Prevention disagreed, contending they could still spread the virus. The CDC believed the 14 should not be flown back with uninfected passengers.

"It was like the worst nightmare," said a senior U.S. official involved in the decision, speaking on the condition of anonymity to describe private conversations. "Quite frankly, the alternative could have been pulling grandma out in the pouring rain, and that would have been bad, too."

Subject: RE: quick question: when does an epidemic become a "pandemic" officially?

It is impossible to predict at this point if the current outbreak will progress to a true pandemic. The future of this outbreak and whether it will progress to a pandemic will be determined by two factors: 1) the degree to which China controls infections in China, which will ultimately impact how many infections leak out to other countries in the world. 2) The success or not of other countries that have received travel-related cases from China in preventing the development of sustained transmission of infections in their own country. If these other countries are successful in containing the transmissions, then a pandemic will be avoided. If a large number of countries are unsuccessful in preventing sustained multi-generation transmissions, then we could witness the next pandemic.

CAUTION: EXTERNAL SENDER

Joel:

There are many iterations of the definition of a "pandemic". However, one that I use that is simple and understandable is as follows: An outbreak of a serious infectious disease with substantial global health consequences (usually one that has never before been experienced by the human population) that is transmitted readily from person to person and where there is sustained transmission (i.e. multiple generations of person to person to person) in multiple countries and regions of the world. In this regard, the coronavirus outbreak in China is an "epidemic" in China, but it is not yet a pandemic since there is not "sustained" person to person transmission throughout the world. There are infections in other countries (more than 25 countries), but these started as travel related cases from China and although there are several human to human infections in these other countries, these infections have not yet been "sustained". If we start seeing sustained, multiple generations of transmissions in many countries throughout the world, then the outbreak will have progressed to fill the criteria of a true pandemic.

Hope that this is helpful.

Best regards,
Tony

Subject: quick question: when does an epidemic become a "pandemic" officially?

Dear Tony Fauci:
Hi! Busy times. Hope you are well. Can you explain to me how we will know if and when covid-19 has become pandemic, versus whatever you'd call the current situation? Just in general, what's the definition of a pandemic?
Thank you...best, Joel

(and thanks for calling me back last weekend, sorry I missed you)

Subject: Tony, I'm still working on this, but need your reaction

Meanwhile, on the other side of the earth, there have been 73,000 cases of coronavirus and more than 2000 deaths. This leaves American health experts hoping that the number of infections has been dramatically underreported.

That is not a typo. If the current numbers are close to accurate, it indicates a coronavirus mortality rate upwards of 2 percent. The morality rate for the seasonable flu is generally .1 percent. The mortality rate for pandemic flu is .3 percent. The particularly deadly flu pandemic of 1918 –

which took the lives of more than 100 million people around the world – had a mortality rate of 1.8 to 2 percent.

So, if 2000 deaths is the numerator, scientists hope that the denominator is actually much larger. And that is probable, given the likelihood that there are many more people who have the infection but don't know it, or are not showing symptoms.

The good news? The outbreak started in a single location and seems largely contained there. There have been several hundred cases in more than 25 countries outside of China. But the overwhelming majority have been travel related. The containment measures of Singapore, Hong Kong and Japan – which have the most cases – seem to have been successful. Of the 15 American cases (before the arrival of the cruise ship passengers), 13 are travel related. The two others are spouses of people in that group. We still have not seen widespread, sustained transmission from person to person outside of China.

The Chinese reaction to the virus has shown the weaknesses and advantages of authoritarianism. The immediate response of a system built on fear is to a problem like this one is denial and deception. No one wants to carry bad news. So local Chinese officials spent the first week of the outbreak – as the disease was spreading under the radar – insisting that the transmission of the virus was all animal to human.

But only in a society like China could you have the effective lockdown of 50 million people, including the entire city of Wuhan, to slow the spread of the disease. Public health officials in most places – who are required to balance health needs with civil liberties – would not even consider such a measure. Yet it appears to be working.

The danger? "All that is needed is for a few countries in the developing world that can't contain the coronavirus," Tony Fauci told me. "This could be the second wave of the pandemic."

Pandemic diseases tend to attack the weakest links – the most vulnerable health systems – in the global chain. If there is sustained transmission in those places, says Fauci, "even countries with best practices will suffer." Countries in Africa are of particular concern. There are millions of Chinese in Africa, and many Africans study in China. Countries such as Ethiopia, Senegal and South Africa seem to be doing a good job at testing random samples for coronavirus in key cities. But Liberia? Guinea? Sierra Leone?

Seldom has there been a stronger argument for American global engagement to strengthen African health systems, which constitute part of own immune system against pandemics. Seldom has there been a better argument to abandon “America First” posturing and to recognize that our own fate is closely tied to the fate of other nations.

Much about the future course of the disease depends on the answer to a scientific question: Is someone who has the virus but lacks symptoms – or has symptoms so mild they hardly notice – capable of transmitting the virus to others? “It looks like the answer is yes,” says Fauci. Which would make the virus far harder to control.

“We may find that the virus is highly transmissible, but less lethal than we thought in the beginning,” Fauci told me. In this case, the danger would be similar to a particularly bad influenza. And the outbreaks could be seasonal, like the flu as well. “I would not be surprised if that happened,” Fauci concluded.

2.19.2020

Dear Dr Fauci,

Thanks so much for being who you are and for dedicating your life to protecting all of us. I write because I saw your interview on PBS tonight and had a question pertaining to denominators and numerators. Please know that I profess absolutely no expertise in areas pertaining to biology nor medicine nor disease and while I understood and agree with your estimation that the fatality rate of the Corona virus to date may be somewhat inflated of the number of cases is understated, I have a related question for you regarding info I was able to find at this site https://www.worldometers.info/coronavirus/

Regarding data this site reports, among many things, and as one scrolls down, that the 'number of active cases' reported today is 57,228 and the number of these that are 'serious or critical' is 12,064. In a worst case scenario, and taking the 12,064 as the numerator and dividing it by a denominator of 57,228, we get 21.08, or about 21%, much higher that the 1% based on total deaths over total cases so far. Of course this is not fair but my question is this: can we know **better** how many of the patients (cases) who are 'serious or critical' and still being treated will recover?

Thanks much for any reply-
Alan DiCara, Winsted, CT

Subject: RE: CoronaVirus Epidemic -- a Thought

David:

Thanks for the note. I hope that all is well with you. Although allogeneic/semi-allogeneic blood transfusions could be an interesting approach to serious COVID-19 disease, there are a number of existing drugs such as remdesivir (nucleotide analogue) and Kaletra (protease inhibitor) that have some pre-clinical activity against the virus and these are now being tested in randomized clinical trials.
Best regards,
Tony

Subject: CoronaVirus Epidemic -- a Thought

Dear Tony,

It has been some time since we last spoke, but this current catastrophe has provoked my thinking about possible therapeutic interventions that could be immediately employed -- in advance of therapies/vaccines that will take many months to create. And I need to share those thoughts with you.

My suggestion is to treat actively-infected, and acutely ill, patients (under carefully controlled procedures) with allogeneic/ semi-allogeneic blood transfusions. The resulting GVHD response should theoretically combat, and eradicate the viral infection.
I look forward to your thoughts on this suggestion.

With best wishes to you and your family,

David

MESSAGE ON BEHALF OF THE GPMB CO-CHAIRS DR BRUNDTLAND AND MR SY

Dear Board Members,

We would like to hold a teleconference of the Board **today, 20 February at 13:00 Geneva time**.

The agenda for the call would be as follows:

- Short update and stock taking on the coronavirus outbreak;
- Functioning of the Secretariat and improving effectiveness of the Board;
- Way forward

Please note that this call would be a **closed discussion, for Board members only**.

We would appreciate if you could confirm your participation to Amélie Rioux (at [redacted] (b) (6)

We will share with you shortly the call-in details.

Thank you for your support and continued engagement. We look forward to the call.

With kind regards,

Gro and As

Subject: Requesting your assistance: Draft NIAID Insert for Upcoming Coronavirus Hearings

Dr. Fauci:

In preparation for the upcoming COVID-19 hearings of the House Committee on Energy and Commerce Health Subcommittee and the Senate Committee on Health, Education, Labor and Pensions, we have drafted the attached NIAID insert for inclusion in the combined HHS statement for the record. The Department plans to use the same combined statement for both the House and Senate hearings.

The attached draft has been reviewed by the Divisions and Drs. Harper, Eisinger, Lerner, and Marston, as well as Courtney Billet, Martin Johnson, Greg Folkers, and Laurie Doepel.

The Department has asked to receive your statement by COB tomorrow, Feb. 20th.

Thank you for your help.

Subject: BioCentury coverage of mAbs to treat COVID-19
Importance: High

Dear Dr. Fauci,

I hope all is well. BioCentury is doing a roundup of companies and institutions developing antibodies against the SARS-CoV-2 virus to treat patients with COVID-19. Since you told my colleague Steve Usdin NIAID is developing its own mAbs against the virus, we'd like to include information about that program in our roundup.

Would you or one of your colleagues be able to answer the following questions? Any information you could share by 5 PM Pacific Time on Thursday, Feb. 20 would be greatly appreciated.

1. Are your mAb candidates being developed against specific targets on SARS-CoV-2? If so, what are those targets?

2. What platforms or processes are you using to identify mAb candidates?

3. Do you have multiple mAb programs against SARS-CoV-2 proceeding in parallel, and if so, how are they distinguished?

4. What is that status of each of your mAb programs? For example, have you nominated any lead candidates, are you awaiting patient samples, etc.?

5. Do you have any metrics on lead candidates available yet, such as neutralization titers? If so, what are they?

All the best,
Karen

Subject: Invitation to the Consultation on Financing Coronavirus Disease 2019 (COVID-19) Vaccine Development | Thursday, February 20, 2020 | 9:30am to 1:30pm | World Bank Headquarters, Washington DC

Dear Dr. Fauci,

On behalf of the World Bank health team, in coordination with the Coalition for Epidemic Preparedness Innovations (CEPI), it is our pleasure to invite you to a half-day consultation on ***Financing Coronavirus Disease 2019 (COVID-19) Vaccine Development***. The meeting is set to take place on **Thursday, February 20, 2020** from **9:30am to 1:30pm** at the **World Bank Offices in Washington DC** (located at 1818 H St NW) on **floor C2, conference room MC C2-125.**

As you know, the novel Coronavirus outbreak, which started in Wuhan, China, is evolving rapidly. As of today, the number of confirmed cases has increased significantly to over 60,000 and the virus has reached 25 countries. The outbreak, a Public Health Emergency of International Concern (PHEIC), poses a threat to countries worldwide, especially those with weak health systems and low levels of pandemic preparedness.

It is of urgent importance that we move quickly to finance the development of the appropriate countermeasures for a disease that risks becoming endemic across the globe. Two critical issues are necessary to address: i) immediate financing for the development and scale-up of a diversified portfolio of vaccines, and ii) financing the manufacturing and procurement of vaccine for global distribution.

To enhance our discussions we are working on a background paper which we will share along with an agenda at the earliest. Recognizing the short notice, we will provide remote connection details for those unable to travel for the meeting. A working lunch will also be provided.

We hope that you will be able to participate in this important meeting. Kindly confirm your participation to Ms. Gabrielle Williams, Health, Nutrition and Population Global Practice, World Bank (wbhealthevents@worldbank.org). Please do not hesitate to reach out with any questions.

Looking forward to your positive response.

Best regards,
Feng Zhao

Subject: Potential Speaking Engagement: Winter 2021

Dear Dr Fauci

I know things must be impossibly busy right now with the current coronavirus issues but wanted to touch base to see whether you may be interested in a speaking engagement next Spring as part of our [redacted] (b) (6)

A bit about me: I am a [redacted] (b) (6) Air Force Major General and retired SES from the Department of Defense. [redacted] (b) (6) is an associate professor emeritus from the School of Medicine and Health Sciences at the George Washington University. We are both longtime admirers.

[redacted] (b) (6) consists of people drawn from a wide variety of backgrounds, including doctors, lawyers and many from the senior tiers of the finance and corporate worlds up to and including former CEOs and other executives (and even a few retired senior government folks like me). It is an active, well-read and learned community with a keen interest in current events. As an example, we have a very active Foreign Policy Association chapter that always draws folks from across the spectrum of political and policy perspectives for interesting and well-informed discussions.

Our [redacted] (b) (6) speaker series consists of presentations on a vast array of subjects, from literature and art to current events and public policy issues. Typically held on Tuesdays nights from December through April, these sessions consist of a presentation of an hour or so followed by Q&A and general discussion. We always draw standing room only crowds.

Recent and upcoming speakers have included:

(b) (6)

[redacted]

The recent coronavirus outbreak has captured the interest of the nation and the world. Our folks would be extremely interested in how organizations such as NIH respond and address these incredible challenges. A presentation by you about your work on these issues, from your groundbreaking work on AIDS onward or any other topic of your choosing, would be absolutely the height of our season.

We pay transportation, lodging, an honorarium, and could even arrange for a round of golf at one of our outstanding golf courses! (Of equal importance is that we can offer you a brief respite from the cold of winter.). There are direct flights from Washington DC to West Palm Beach. We have openings in January, February and March 2021.

We would be deeply appreciative of your favorable consideration. Please feel free to contact me if I can answer any questions

F. ANDREW TURLEY

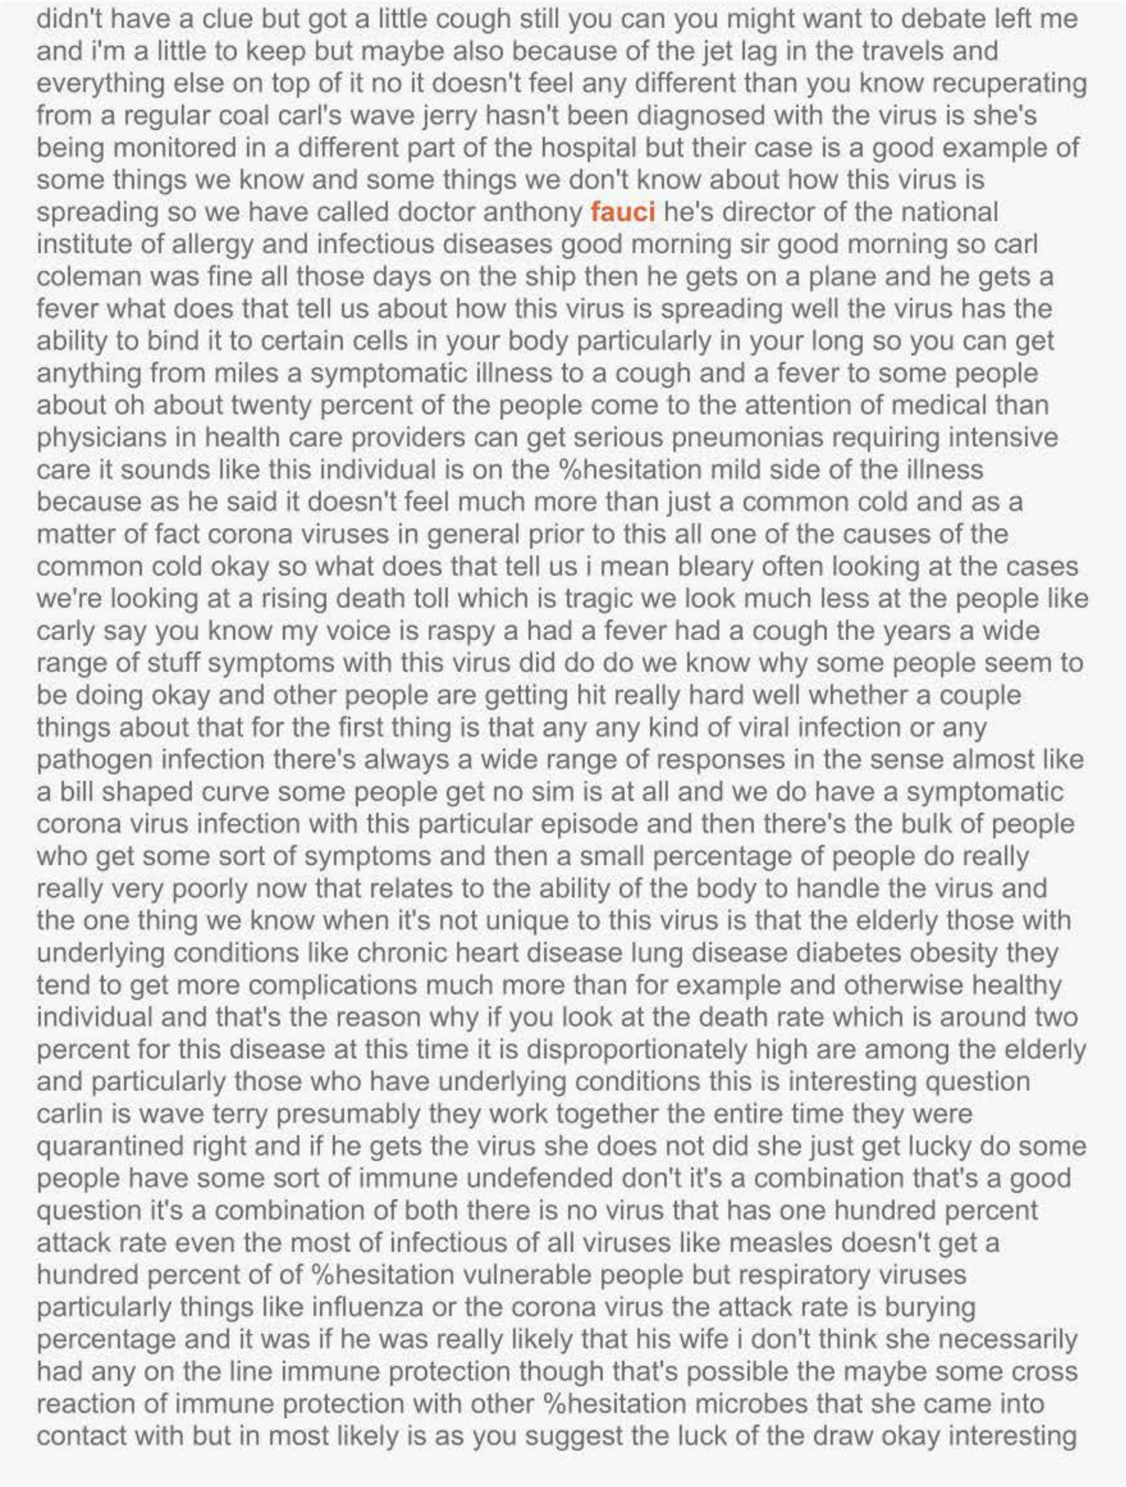
it's morning edition from n. p. r. news on david green in culver city california and a militant in washington d. c. good morning in china the death toll from the corona virus has hit two thousand world leaders in public health officials are trying to contain it but new infections keep showing up carl golden for example he was a passenger on the diamond princess that's the cruise ship where hundreds of people got the virus we took an aquatic clues to also alone what went wrong who knew we were going and the crew and beautiful omar here's how he ended up in omaha carl his wife jerry were quarantined on that ship for twelve days in a felt fine the whole time but then the gun on a flight back to the u. s. and carl started feeling sick or wind burke from japan to this day about two hours into the flight they woke up with a high fever after napping a little bit and the doctors on board confirmed the and then on the flight landed he tested positive for the coronavirus he's recovering now in a bio contain mean unit at the university of nebraska's medical center he's going to have to spend fourteen days there and isolation well you know working %hesitation %hesitation catering we've heard on a but one of the two days of the different doctors each day i



didn't have a clue but got a little cough still you can you might want to debate left me and i'm a little to keep but maybe also because of the jet lag in the travels and everything else on top of it no it doesn't feel any different than you know recuperating from a regular coal carl's wave jerry hasn't been diagnosed with the virus is she's being monitored in a different part of the hospital but their case is a good example of some things we know and some things we don't know about how this virus is spreading so we have called doctor anthony **fauci** he's director of the national institute of allergy and infectious diseases good morning sir good morning so carl coleman was fine all those days on the ship then he gets on a plane and he gets a fever what does that tell us about how this virus is spreading well the virus has the ability to bind it to certain cells in your body particularly in your long so you can get anything from miles a symptomatic illness to a cough and a fever to some people about oh about twenty percent of the people come to the attention of medical than physicians in health care providers can get serious pneumonias requiring intensive care it sounds like this individual is on the %hesitation mild side of the illness because as he said it doesn't feel much more than just a common cold and as a matter of fact corona viruses in general prior to this all one of the causes of the common cold okay so what does that tell us i mean bleary often looking at the cases we're looking at a rising death toll which is tragic we look much less at the people like carly say you know my voice is raspy a had a fever had a cough the years a wide range of stuff symptoms with this virus did do do we know why some people seem to be doing okay and other people are getting hit really hard well whether a couple things about that for the first thing is that any any kind of viral infection or any pathogen infection there's always a wide range of responses in the sense almost like a bill shaped curve some people get no sim is at all and we do have a symptomatic corona virus infection with this particular episode and then there's the bulk of people who get some sort of symptoms and then a small percentage of people do really really very poorly now that relates to the ability of the body to handle the virus and the one thing we know when it's not unique to this virus is that the elderly those with underlying conditions like chronic heart disease lung disease diabetes obesity they tend to get more complications much more than for example and otherwise healthy individual and that's the reason why if you look at the death rate which is around two percent for this disease at this time it is disproportionately high are among the elderly and particularly those who have underlying conditions this is interesting question carlin is wave terry presumably they work together the entire time they were quarantined right and if he gets the virus she does not did she just get lucky do some people have some sort of immune undefended don't it's a combination that's a good question it's a combination of both there is no virus that has one hundred percent attack rate even the most of infectious of all viruses like measles doesn't get a hundred percent of of %hesitation vulnerable people but respiratory viruses particularly things like influenza or the corona virus the attack rate is burying percentage and it was if he was really likely that his wife i don't think she necessarily had any on the line immune protection though that's possible the maybe some cross reaction of immune protection with other %hesitation microbes that she came into contact with but in most likely is as you suggest the luck of the draw okay interesting and they got to patching wondered if you could clear something up because we've been hearing reports about so called super spread ours these you who spread the virus to a very high a number of other people and it sounds like a scary thing but and i just under is this a real phenomenon there that there are people who give the virus to more people than most and why is that happening well it is certainly the phenomenon of the super spreading israel we story with sars back in two thousand two and two thousand in three and they're episodes already with this particular new corona virus and it's a combination of two things it's an individual whose either at a particular moment in time shedding a very large amount of virus which makes it much easier to infect a group of people who are around him but you also see it sometimes in the hospital setting when you have a number of health care providers taking care of someone and that person is shedding a lot of virus so the short answer to your question is there are super spread is and it's a real phenomenon okay okay what we would you say at this moment is the most important or the most pressing question about this virus that we don't have answers to yet well what we don't know for sure we know that there are people who are infected will without symptoms or very minimal symptoms they hardly notice they're infected well we don't know is the extent to which people who have no symptoms are spreading it so we do know that this can occur because we have anecdotal documented cases of people who do not have symptoms who actually have infected someone usually a family member but we don't know the extent to which this cars in the broad component of this outbreak doctor anthony **fauci** the director of the national institute of allergy and infectious diseases sir thanks for joining us it was a pleasure to be with you

Subject: New England Journal of Medicine Editorial

Dear Dr. Fauci,

I am delighted that you have agreed to write a signed editorial to accompany the article on the initial estimates of key transmission parameters associated with nCoV-2019 virus by Li et al.

The general purpose of the Journal's editorials is to provide the reader with an authoritative interpretation or elaboration based on the substance of the article. Since this substance is usually not within the average reader's special competence, such readers will particularly benefit if the editorial avoids technical jargon, explains the article's contribution to a field of knowledge, and emphasizes, whenever possible, its clinical implications. The editorial commentary should not be concerned exclusively with the article in question but rather should use the article as a starting point for a more general discussion.

Because editorials involve interpretation and opinion, you and your potential coauthor must be free of significant relevant financial associations (including equity interest, regular consultancies, or major research support) with a company, or with a competing company, that stands to gain from the use of a product discussed in the editorial. Please contact me immediately if you are considering a coauthor, so I can ensure that your candidate meets our criteria. Additional information about disclosure of financial and other associations appears below this letter.

Please bear in mind that your editorial represents your (and any coauthor's) personal opinion. The Journal does not include statements of grant or other support or acknowledgments with editorials.

Journal policy dictates that we must have on file a signed Copyright Transfer and Authorship Agreement from each author before a manuscript can be accepted. Therefore, the enclosed form should be signed by all authors and faxed to (781) 207-6529.

Your editorial is due at the Journal on Monday, February 17, at the very latest if the deadline imposed by our printing schedule is to be met. If the editorial is to include a figure, please submit the figure at least one week before the due date for the editorial itself.

*** Additional information about preparing and submitting your editorial is given below; please read it carefully. ***

The editors must reserve the right to edit (or even reject) your editorial, but whether we use it or not, the Journal currently offers a modest stipend of $300.

Thanks again for agreeing to write this editorial for the Journal. I look forward to receiving it.

Sincerely yours,

Lindsey R. Baden, M.D.
Deputy Editor

New England Journal of Medicine
10 Shattuck Street
Boston, MA 02115
(617) 734-9800
Fax: (617) 739-9864
http://www.nejm.org

LENGTH OF YOUR EDITORIAL
NEJM editorials should not exceed two printed pages. This means that your word count before editing should not exceed 750 words (approximately 4500 characters). Note that we spell out trial names and most other abbreviations for our readers, and we include trial registration numbers for any clinical trials mentioned; these will lengthen your editorial if you have not included them. Please provide a title not exceeding 45 characters and a word count for the text; the entire manuscript, including references, should be double-spaced.

REFERENCES
Cite no more than 10 references, including the article you are writing about. The average collection of 10 references requires about a quarter of a printed page.

TABLE OR FIGURE
A table or a figure in your editorial will require a reduction in the number of words; because figures and tables vary in size, you may be asked to shorten the text of your editorial during the production process. A quarter-page table roughly equals 250 words, and a half-page table roughly equals 500 words.

DISCLOSURES
When completing your disclosure form, please indicate, in the "Comments" field next to the type of relationship being disclosed, the amount (in U.S. dollars) of any support you have received. Please also indicate how much of this support has been received over the past 2 years. Please e-mail your completed disclosure form to editorial@nejm.org.

In the event of publication, each author's submitted disclosure form will be posted on the Web (with any dollar amounts redacted).

COPYRIGHT TRANSFER
Each author must complete a copyright transfer agreement form. Please sign it and fax it back to 781-207-6529 as soon as possible.

TO SUBMIT YOUR EDITORIAL
*** It is important that you follow the instructions below to ensure that your article enters the correct queue. ***

When you are ready to submit your manuscript, please log in to the New England Journal of Medicine - Manuscript Central site (http://mc05.manuscriptcentral.com/nejm). Your case-sensitive USER ID is afauci@niaid.nih.gov. For security purposes, your password is not listed in this message. If you are unsure of your password, please visit https://mc05.manuscriptcentral.com/nejm and enter your e-mail address in the "Forgot Your Password?" field.

Once you are logged in, the Main Menu will be displayed. Please click on the Author Center, where you will find the manuscript listed under "Invited Manuscripts." You can click on the "Continue Submission" button to begin submitting your article.

Please wait...

Jon:

Your hypothesis is certainly possible, but I think unlikely. In a NEJM paper for which I have just written an editorial, there were 400+ patients and none younger than 15 years old. I am certain that children from birth to 15 years were exposed to and primed by coronaviruses multiple times and so if 2nd infection enhancement were an important issue, we should have seen it in children and adolescents 15 years old and younger. Just a thought, but anything is possible.

Subject: Coronavirus

Good morning, Tony,
I woke up thinking this: given the relative sparing of young people during the COVID-19 outbreak, could something similar to what happens with dengue be going on? Could a second coronavirus infection - albeit with a genetically different variant than the first - bring about worse disease than the first? And, since up to a third of the common cold is caused by a variant of coronavirus, could older people somehow have been primed by an earlier coronavirus infection?

Dr. Fauci,

I am living in Japan [redacted] (b) (6) and this morning I saw this video released by Dr. Kentaro Iwata a infectious disease control.specialist

Please have somebody on your staff review this **ASAP** short description of Dr Iwata's 1 day visit on the ship. He has experience with Ebola, Sars etc. He describes an alarming condition that you and CDC must be aware of. Japan has no CDC and they tend to be very bureaucratic.

https://www.youtube.com/watch?v=vtHYZkLuKcI&feature=youtu.be

I apologize if you already have this information.

Respectfully
Larry Washburn [redacted] (b) (6) Living in Japan

> Dear Dr Fauci:
>
> As I mentioned on the phone, we just today decided that we will have a special session on COVID-19 at CROI. It will be on Tuesday, March 10, during the lunch break; the initial general structure will be a 10- to 15- minute overview of the epidemic (CDC), a 25-min talk by Ralph Barac (UNC) about the virology of coronaviruses, and a 10- to 15-minute summary on what NIAID/NIH is doing and planning. We thought that this being one of the first large medical conferences in infectious diseases this year, that it is important that we address COVID 19 at CROI.

We know that this is terribly last minute, but the CROI Chairs and Foundation are hoping you are free to give the NIAID/NIH update. CROI is in Boston, March 8 to 11.

If you think you would be able to do this, we will send a more formal communication with details and work with Patty on the specifics. Thank you so much Dr Fauci; we hope you will be able to join us.

Best,

Donna

Subject: ACTION: Invitation to Provide Opening Remarks at the NIH-AACR Cancer, Autoimmunity, and Immunology Conference on March 23rd (on the NIH campus)

Dear Dr. Fauci,

It's pretty clear that you have been ridiculously busy over the past month+ serving as our nation's top infectious disease doctor! Thanks so much for your leadership and dedication, Dr. Fauci!

I'm actually reaching out to you on a topic other than the coronavirus, as I am writing on behalf of the co-chairs for an important NIH-American Association for Cancer Research (AACR) conference (**the NIH-AACR Cancer, Autoimmunity, and Immunology Conference) that will be taking place on March 23-24, 2020, on the NIH campus (in the Masur Auditorium in the NIH Clinical Center).**

The co-chairs would like to invite you to be the opening speaker on Monday, March 23rd. Dr. Sharpless will be the opening speaker on Tuesday, March 24th. Please see the attached draft agenda.

Now in its third year, the Cancer, Autoimmunity, and Immunology Conference focuses on: 1) understanding the biology of immune-related adverse events which have occurred in cancer patients treated with immunotherapies and how that might inform the study of autoimmune disease, and 2) defining the potential for the study of autoimmune disease to lead to greater understanding of the treatment and management of immune-related adverse events during and following cancer therapies. The goal of this interdisciplinary conference is to bring together people who might not typically interact to promote cross-fertilization for the betterment of both research and clinical care, which is why there are four NIH ICs very much involved in the Conference, including: NCI, NIAID, NIAMS, and NIDDK.

Chairing this effort on behalf of the AACR is Julie R. Brahmer, MD, Johns Hopkins University. From the NIH, we have Elad Sharon, MD, MPH, NCI; Ravi Madan, MD, NCI; Connie Sommers, PhD, NCI; Howard Young, PhD, NCI; Katarzyna Bourcier, PhD, NCI; Marie Mancini, PhD, NIAMS; Annette Rothermel, PhD, NIAID; and Lisa Spain, PhD, NIDDK.

I know the diverse audience, including patients, researchers, clinicians, industry, regulators, and others, would be thrilled by your presence. Of course, we also know that you have participated in the previous two conference on this topic, which underscores why they would love to have you participate again!

Please let us know at your earliest convenience if you are interested and able to participate in the conference on Monday, March 23rd. If you have additional questions or concerns, you can contact me at jon.retzlaff@aacr.org or (b) (6)

Thanks again, Dr. Fauci, and I look forward to hearing from you!

Dear Dr. Fauci,

Thank you for submitting your manuscript, "COVID-19 : Navigating the Unchartered" to the New England Journal of Medicine.

Your manuscript has been forwarded to members of our editorial staff, who will make an initial evaluation and decide whether it merits further consideration. You will be notified of the decision as soon as possible.

Your manuscript ID is 20-02387.

Please mention the above manuscript ID in all future correspondence or when calling the office for questions. If there are any changes in your street address or e-mail address, please log in to ScholarOne Manuscripts at https://mc05.manuscriptcentral.com/nejm and edit your user information as appropriate. You may also view the status of your manuscript at any time by checking For Authors section of the site.

We are undertaking evaluation of your manuscript with the understanding that neither the substance of the article nor the figures or tables have been published or will be submitted for publication elsewhere during the period of review.

Please provide the editors with copies of other manuscripts by you or your coauthors addressing similar or related research questions that are in preparation or under consideration at other journals. This does not apply to abstracts published in connection with scientific meetings or to news reports based on presentations at such meetings.

The Journal's policy is explained more fully at http://www.nejm.org/page/author-center/editorial-policies.

Please call us at 617-734-9800 if you have any questions.

Sincerely,

Eric J. Rubin, MD, PhD

Subject: draft response for NBC online

Reporter: Jacqueline Stenson
Organization: NBC online
Phone #(s): [redacted] (b) (6)
Subject: COVID-19

NBC online asked, "What is NIAID's position on whether the SARS-CoV-2 is transmissible in asymptomatic people?"

I would propose that we send a response to Jacqueline attributed to ASF:

Early case reports indicate in certain circumstances **SARS-CoV-2 is transmissible in asymptomatic people. We do not know the extent to which asymptomatic transmission is impacting the outbreak. However, we know that people with symptoms are usually the main driver of outbreaks of other respiratory diseases.**

Subject: Requesting your assistance: Draft NIAID Statement for Upcoming Appropriations Hearings

Dr. Fauci:

In preparation for the upcoming NIH budget hearings of the House and Senate Appropriations Subcommittees on Labor, HHS, Education, and Related Agencies, we have drafted the attached NIAID statement for the record, highlighting the topics that you previously selected.

We have a firm 3-page limit for the statement. It has been reviewed by the Divisions and Drs. Harper, Eisinger, Lerner, and Marston, as well as Courtney Billet, Martin Johnson, Greg Folkers, and Laurie Doepel.

NIH OLPA has asked to receive your statement by this Wednesday, Feb. 19th. Please let us know if you would like us to request additional time for your review, given competing priorities.

Thank you for your help.

papers should come out back-to-back in Virology soon. I am attaching both the pdfs for your interest.

From scientific perspective, it is very satisfying to see that both the papers using completely different approaches arrived at the same virion capture model. That was not anticipated when we initiated the work 5-years ago because the reasons to develop these assays were very different. I have mentioned to Emerman to consider highlighting the papers in the journal issue, and that you and Jim might be willing tom write a short piece but I have not heard about this.

With best regards,
Rao

Sent: Tuesday, February 18, 2020 4:40 AM
To: Fauci, Anthony (NIH/NIAID) [E] [redacted] (b) (6)>
Subject: Singapore Coronavirus Updates

Dear Dr. Anthony Fauci,

I'm Bernice [redacted] (b) (6).

I had read your online discussion details on USA Today which says:
" Another thing that we don't know is why, with a respiratory-borne illness, are there virtually no children getting infected. I mean, there are no cases of kids less than 15 years old. Does that mean for some strange reason they're not getting infected, or the illness is so mild in children that we're not noticing it? It's very clear the median age is 56 or 59."

I thought it would be crucial to share updates on Singapore's coronavirus situation for your reference, because you are the expert who could help analyze the current situation. Till date, in Singapore [redacted] (b) (6) have two young children who are infected:

ONE YEAR OLD
"Case 76 is a one-year-old Singaporean who was among the group evacuated from Wuhan on Feb 9. The toddler was without symptoms when he boarded the flight back to Singapore. He was put under quarantine upon landing in Singapore, and was confirmed to be infected with COVID-19 on Sunday afternoon. Advertisement He is currently warded in an isolation room at KK Women's and Children's Hospital, said MOH." Quoted from https://www.channelnewsasia.com/news/singapore/covid19-coronavirus-singapore-update-feb-17-12441176

SIX-MONTH OLD
" COUPLE, BABY AND MAID INFECTED The 28-year-old mother - whose infection was announced on Tuesday - works at Yong Thai Hang, a health product shop that primarily serves Chinese tourists. Her husband, a 45-year-old Singaporean tested positive on Wednesday at about 2pm, and is currently warded in an isolation room at the National Centre for Infectious Diseases (NCID). Both have no recent travel history to China. The couple's child, a six-month-old boy, tested positive at the same time and is currently warded in an isolation room at KK Women's and Children's Hospital. The family's domestic helper was one of the confirmed cases on Tuesday. MOH said in an update on Thursday that the child

was not in any infant care facility and was cared for at home, prior to being admitted to the hospital." - Quoted from https://www.channelnewsasia.com/news/singapore/wuhan-virus-coronavirus-singapore-number-cases-12395928

Thanks, Best Regards & God Bless,
Bernice Huang

Subject: RE: NBC News Inquiry

Thank you Tony,

We heard this evening that there were 169 new confirmed cases aboard the cruise ship. Do you know if this changes the "official public" number at all?

Thanks,
Colin

Subject: [EXTERNAL] RE: NBC News Inquiry

Colin:

Thanks for the note. The number 44 is in flux. When I checked a couple of days ago, the "official public" number was 44. However, it was clear that there was likely more than that since the results of the tests were still coming back on some individuals. And so, it is a minimum of 44 infected from the cruise ship, but it is uncertain how many more than 44 are infected. I do not know where the Americans are staying
Best,
Tony

Hi there,

I'm reaching out on behalf of NBC National News – would you be able to confirm that 44 Americans aboard the Diamond Princess cruises ship have tested positive for coronavirus?

Also, would you be able to say where the Americans are staying as they are being treated for the virus?

Please **REPLY ALL** with your response, or give us a call at (212) 664-5222.

Thank you,
Colin

Subject: CNNi Interview Request: Anthony Fauci

Dear Mr Fauci,

I hope this finds you well.

I'm writing to you from CNN International to see if you are available to join Becky Anderson on her prime time flagship show 'Connect the World' for a live interview on today to discuss the coronavirus.

The show airs live between **10amET** – **12pmET** – do you have any availability during these hours to come to a convenient bureau?

We really loved having you on the show last Sunday! As the director of the National institute of Allergy and Infectious Diseases your insight is always great for our global audience.

Might it be possible to arrange something?

Background on CNN

- CNN International reaches more than 250 million households worldwide including in the US via DIRECTV.
- CNN International is the number one international TV news channel according to all major media surveys across Europe, the Middle East and Africa, the Asia Pacific region and Latin America.
- In September 2019 **CNN.com** had 162 million unique readers globally per month and 114 million mobile readers a month, leading the BBC, Yahoo and New York Times.

Best,

Joanna Hynds

Subject: COVID 19 Diamond Princess Patients Possible Transmission by Fomites

I am a dermatologist but also a clinical researcher and scientist.
I was reading all of the news regarding concerns and questions on how the fellow patients are being infected.

A few questions arose, based on the NIH data on SARS Coronavirus, that has been much more studied, and most likely less virulent than the current COVID 19, which supposedly has HIV traits as well as traits to increase transmission.

I have wondered if COVID-19 is like Legionella, and possibly transmitted in the airborne water droplets in the air conditioning units of the Diamond Princess ship.

Even with the SARS Coronavirus, it was shown to be infective on fomites for up to 28 days unless 40 degrees Celsius and 80% humidity, when it was then inactivated in a few hours (see the attached article). I am wondering if the trays of food, after being passed to passengers on the ships, were then washed in suboptimal conditions (NOT at 40 degrees Celsium for several hours at 80% humidity)

I AM concerned, that based on the reinfection of those in Wuhan, China, after they returned home, on whether 14 days of quarantine is enough, based on the modeling and studies on the SARS Coronavirus, and whether 28 days of quarantine may actually be needed.

With the HIV virus component of COVID 19, one must also wonder if the T cells are being infected and passing the infection along within an infected patient. In the U.S., we may need to beware of blood transfusions from anyone infected, even asymptomatically, with COVID 19.

I am sure that you have teams of clinicians and scientists working on this, and I don't know if any of the original scientists working on the SARS models are still around at Chapel Hill to perform these related studies and modeling.

Subject: New England Journal of Medicine Editorial

Dear Dr. Fauci,

I am delighted that you have agreed to write a signed editorial to accompany the article on the initial estimates of key transmission parameters associated with nCoV-2019 virus by Li et al.

The general purpose of the Journal's editorials is to provide the reader with an authoritative interpretation or elaboration based on the substance of the article. Since this substance is usually not within the average reader's special competence, such readers will particularly benefit if the editorial avoids technical jargon, explains the article's contribution to a field of knowledge, and emphasizes, whenever possible, its clinical implications. The editorial commentary should not be concerned exclusively with the article in question but rather should use the article as a starting point for a more general discussion.

Because editorials involve interpretation and opinion, you and your potential coauthor must be free of significant relevant financial associations (including equity interest, regular consultancies, or major research support) with a company, or with a competing company, that stands to gain from the use of a product discussed in the editorial. Please contact me immediately if you are considering a coauthor, so I can ensure that your candidate meets our criteria. Additional information about disclosure of financial and other associations appears below this letter.

Please bear in mind that your editorial represents your (and any coauthor's) personal opinion. The Journal does not include statements of grant or other support or acknowledgments with editorials.

Journal policy dictates that we must have on file a signed Copyright Transfer and Authorship Agreement from each author before a manuscript can be accepted. Therefore, the enclosed form should be signed by all authors and faxed to (781) 207-6529.

Your editorial is due at the Journal on Monday, February 17, at the very latest if the deadline imposed by our printing schedule is to be met. If the editorial is to include a figure, please submit the figure at least one week before the due date for the editorial itself.

*** Additional information about preparing and submitting your editorial is given below; please read it carefully. ***

The editors must reserve the right to edit (or even reject) your editorial, but whether we use it or not, the Journal currently offers a modest stipend of $300.

Thanks again for agreeing to write this editorial for the Journal. I look forward to receiving it.

Sincerely yours,

Lindsey R. Baden, M.D.
Deputy Editor

New England Journal of Medicine
10 Shattuck Street
Boston, MA 02115
(617) 734-9800
Fax: (617) 739-9864
http://www.nejm.org

LENGTH OF YOUR EDITORIAL
NEJM editorials should not exceed two printed pages. This means that your word count before editing should not exceed 750 words (approximately 4500 characters). Note that we spell out trial names and most other abbreviations for our readers, and we include trial registration numbers for any clinical trials mentioned; these will lengthen your editorial if you have not included them. Please provide a title not exceeding 45 characters and a word count for the text; the entire manuscript, including references, should be double-spaced.

REFERENCES
Cite no more than 10 references, including the article you are writing about. The average collection of 10 references requires about a quarter of a printed page.

TABLE OR FIGURE
A table or a figure in your editorial will require a reduction in the number of words; because figures and tables vary in size, you may be asked to shorten the text of your editorial during the production process. A quarter-page table roughly equals 250 words, and a half-page table roughly equals 500 words.

DISCLOSURES
When completing your disclosure form, please indicate, in the "Comments" field next to the type of relationship being disclosed, the amount (in U.S. dollars) of any support you have received. Please also indicate how much of

this support has been received over the past 2 years. Please e-mail your completed disclosure form to editorial@nejm.org.

In the event of publication, each author's submitted disclosure form will be posted on the Web (with any dollar amounts redacted).

COPYRIGHT TRANSFER
Each author must complete a copyright transfer agreement form. Please sign it and fax it back to 781-207-6529 as soon as possible.

TO SUBMIT YOUR EDITORIAL
*** It is important that you follow the instructions below to ensure that your article enters the correct queue. ***

When you are ready to submit your manuscript, please log in to the New England Journal of Medicine - Manuscript Central site (http://mc05.manuscriptcentral.com/nejm). Your case-sensitive USER ID is afauci@niaid.nih.gov. For security purposes, your password is not listed in this message. If you are unsure of your password, please visit https://mc05.manuscriptcentral.com/nejm and enter your e-mail address in the "Forgot Your Password?" field.

Once you are logged in, the Main Menu will be displayed. Please click on the Author Center, where you will find the manuscript listed under "Invited Manuscripts." You can click on the "Continue Submission" button to begin submitting your article.

Hi Dr. Fauci: I'm working on a story about WHO DG Tedros and the work that he's doing to contain the coronavirus epidemic. I'm planning on discussing a number of themes, including that responding to outbreaks has become the most visible job of the DG in the past couple of decades. I'd also like to explore the issue of how important it is that countries be as open as possible about disease outbreaks, and that it's the DG's job to encourage that and move countries toward greater transparency and participation in battling outbreaks. Would you care to comment on the job that Tedros is doing in these areas? Please give me a call at +44 2035 251028 or let me know when and at what number to call you. Subject: This ongoing 2019 novel coronavirus, or COVID-19, outbreak has a number…

All: Below is an outline of questions for tomorrow at CFR. Sorry to get this to you late but it seems the news changes everyday. As you will see I focus mostly on coronavirus as I suspect that's where the interest will be but get to bio weapons toward the end.

I am happy to take additional questions or suggestions. These sessions go quickly and we have time for Q and A so I doubt I will get through it all but wanted you all to have something to look at.

Thanks again for doing this tomorrow.

Best
Fran

This ongoing 2019 novel coronavirus, or COVID-19, outbreak has a number of historic firsts. It's the largest quarantine in world history with China locking down over 60 million people. It's the first mass repatriation of American citizens into a quarantine, climbing over 1,000.

Let's start with some quick basics: what is coronavirus? How contagious? What is the morbidity rate?

How does it compare to SARs and MERs? More/less infectious? Lethal?

Just to put this in perspective every year here in the US we deal with the flu. How many Americans on average die each year from the flu?

But as I mentioned coronavirus has resulted in a number of historic firsts, talk about what you expect could be our scientific firsts and what roadblocks do those scientific firsts confront?

Over the years, global economic interdependence has grown in nearly every industrial sector, including health care. But that means our health care is also globally interdependent on other systems less equipped, less transparent and perhaps less responsible global actors.

China closed the wet market where the coronavirus outbreak began on 1/1, gene sequenced the virus on 1/9 so they could develop a diagnostic test but did not share the gene sequence with the global health community until 1/12.

How transparent and quick was the Chinese response? What should the have done that they failed to do? What were the consequences?

China now claims more than 70K infected and almost 1800 deaths from the virus. But It has been widely reported that the Chinese have underreported both numbers. what are Countries international obligations to report accurately? To whom? How do you know the numbers are accurate?

How does the current outbreak impact the domestic medical supply chain? What steps could or should we consider to enhance supply chain resilience?

What do the numbers suggest to you about what to expect regionally and worldwide? Have numbers peaked? Will they continue to rise? With the cruise ship there re now a total of 15 Americans infected. Do you expect additional cases? What scale? How prepared are we nationally? Locally?

Looking back over the roughly past decade, emerging infectious diseases played a recurring ominous theme. Be it from H1N1, to ebola, then Zika, and now the 2019 novel coronavirus, the threat is clearly not dissipating. When it comes to non-disease natural disasters, the Stafford Act provides a Disaster Relief Fund to enable immediate response. By comparison, there is a small Infectious Diseases Rapid Response Reserve Fund. Do we need a more Stafford Act-like mechanism to enable quicker response and research to these new threats? What other actions can we take to better prepare?

While often we see folks painting emerging infectious diseases and biodefense into separate categories, the truth is that there is significant crossover in terms of preparedness and research. Understanding that this is a sensitive topic, could you talk about how we should approach these risks in a comprehensive manner that can achieve public health and national security objectives concurrently?

I'd like to use this to transition to the topic of bio weapons which is what we originally planned to talk about. The landscape here has also transformed. When BioShield was written and the Strategic National Stockpile established we worried about State actors deploying banned weapons like small pox; plague and hemorrhagic fever. And you still must prepare against those things as well as new and emerging threats like the toxins we have seen deployed by Russia and North Korea in more targeted assassinations.

How do you stay ahead of these threats? Do we have the resources and surveillance that we need to stay ahead of the threat? And ensure the necessary vaccines and therapeutics?

The ebola outbreak may be an instructive example, it seems to be coming under some control despite the precarious security situation in the Democratic Republic of Congo. But the ongoing 2018 outbreak was the second largest in history following the 2013-2016 West African outbreak. As a result of these outbreaks, the United States government has pioneered new FDA-approved diagnostics and vaccines, with promising therapeutics seemingly around the approval corner too. What lessons can we draw from the ebola outbreaks? How do you work with and incentivize industry to develop what you need in the event of a catastrophic bio attack? And How do you make the best possible decisions about the stockpile?

I always worried that because we are global leaders if there was a bio attack or outbreak anywhere in the world, others would look to us and to our stockpile for the answer. Are our global allies doing enough to prepare against these threats--whether they be manmade or natural? Are they maintaining adequate stockpiles of medical countermeasures and research bases--and should they be?

Lastly (if we have time)....the FBI recently arrested a Harvard scientist for accepting undisclosed grant money from China for scientific research. It has now been reported that there are similar investigations at a number of US universities including Yale and MIT to name two and that the grant monies are in the billions. What are foreign governments looking for? Why in the US? Clearly a national security risk, is it a bio weapons concern?

Dear Dr. Fauci,

On behalf of the International Cytokine and Interferon Society, please find attached a letter from us as clinicians and scientists committed to developing and implementing therapeutic interventions targeted against global viral infection outbreaks. We propose that high priority be given to evaluating the therapeutic antiviral activities of IFN-as/bc(clinically approved formulations) against COVID-19 which poses a potential threat to global health. Further information is detailed in the attached. The ICIS would be happy to provide the scientific and clinical expertise for this program and welcome further discussion. In particular Dr. Eleanor Fish copied above has the track record and expertise in this area.

Sincerely,

Kate A. Fitzgerald | Professor of Medicine

Subject: Happenings Radio Q+A...

Hi there,
This is Cassidy G-D from Happenings Magazine & Radio in Kenosha, WI- we ever so briefly spoke on the phone earlier today.

I was reaching out with the hope of getting you on our radio program for a 20-30 minute Q+A in which we would talk about the Coronavirus and more specifically the impact it is having on the Diamond Princess Cruise ship along with anything you would like to talk about regarding infectious diseases and or your position as director of the National Institute of Allergy and Infectious Diseases.

Please let me know if you have any interest in being on the air with us and I would be happy to provide further details. You can also get ahold of me by our office phone at 262-564-8800.

Hope you are well and I look forward to hearing back from you, Cassidy G-D

Subject: Info from China

Dear Dr. Fauci,
It is with trepidation that I reach out to you with information that has been shared with me regarding the real status of the Coronavirus in China. My information comes to me from a (b) (6) who has correspondence from a nurse in Harbin, China.

(b) (6) is here on an H1V visa, employed for the past several years at (b) (6) in the international student program. (b) (6) I have no reason to doubt the authenticity of the correspondence that she shared with me.

This correspondence shows a lung X-ray, a glass container of bloody fluid removed from an infected lung, and a map of Harbin, China depicting many areas of the coronavirus outbreaks. The written correspondence reveals that the numbers being released of confirmed deaths is drastically low due to the spread being too fast to test. Deaths in hospital hallways and of medical staff is not being shared in order to prevent panic.

Protective gear is unavailable and the nurse writing the correspondence is fearful for her life. She states that there are five levels of screenings (tests?) before a person is reported as testing positive or of being infected with the virus. If someone dies before being confirmed, these suspected deaths are covered up and not reported. Reported numbers, even of confirmed cases are grossly undercounted.

I figure you and our government realize the information and numbers coming out of China are highly inaccurate, but this correspondence on (b) (6) confirms it. I felt it was only ethical and moral to report this, despite (b) (6) plea that the two people involved in the correspondence fear governmental retribution if it was discovered that they discussed or passed on this confidential information.

I report this and swear it to be true and confidential. I am trusting it will help in some way and not just stir panic.

Jolonda Dillman

ps - feel free to contact me at this address, or my personal email address, that is (b) (6).

again, I have no dog in this fight aside from wanting to avoid a large scale pandemic worldwide.

And I'm sincerely hoping that we throw the rulebook out - and develop a new one - to deal with this the same way we did when we dealt with the 1918-1919 pandemic.

On Mon, Feb 17, 2020 at 10:09 AM Ed Peshko <esp@hedviginc.com> wrote:

> Like you, I've been watching the COVID-19 outbreak with great alarm. Given the current data, I'm almost positive at this point that it will hit the US hard at some point and as a student of history that terrifies me.

So I'm hoping that your department has contacted the Bill and Melinda Gates foundation and see if you could make the following idea national or international. It is a supplemental health system based on AI and mobile technology and consists of two planks:

First:

- train an AI to be able to detect COVID-19 by measurements that can be done by cell phone (for example pictures of patients, recordings of patient's respiratory system)

Second:

- develop and release a smart-phone application that does the following:
    - turns on location tracking so health authorities can see where the cell phone owner is.
    - allows for people to upload health measurements from their cell phone.
    - keeps TRACK of where the cell phone owner is. If that person then tests positive for COVID later on, it can then automatically figure out all the contacts of that person for the last 14 days.
    - notifies those contacts that they have been in contact with someone with COVID-19, to isolate themselves and regularly test themselves.

The goal would be to prevent hundreds of thousands of people from descending on hospitals and overwhelming them, and to allow for the CDC or other medical personnel to go OUT and get them - or isolate them for treatment in their own homes - rather than having them come in and infect everybody.

Now this all hinges on the idea that AI could detect COVID-19 based on an audio recording or a simple picture and do it reliably, but I'm fairly sure that it can based of the peer-reviewed literature. It is not a difficult AI problem assuming that the microphone can pick up sounds well enough - if not, there are already integrated stethoscopes for cell phones that could be mass produced - and once developed to enough precision it could be deployed nationally or internationally fairly easily.

For all I know something like this is already in the works but I haven't heard of anything like it - apart from the chinese app which AFAICT does not use any AI but DOES allow for automatic contact tracing.

I sincerely hope this is already in the works. Ultimately it could be used both for detection and treatment - assuming the current antivirals work out they could be distributed to the same coordinates that positive diagnoses come in, perhaps by cheap drone so that nobody actually needs to be exposed to the virus to effect treatment.

Anyways, thanks for your time and efforts. Personally I'm a software developer but I'm hoping that perspective his helpful - for I view the fight against this virus as an INFORMATIONAL fight. It's like a fire-suppression system or food safety measures. Again, I have no clue whether or not this is already being done, and I apologize in advance if I'm missing something and this all seems obvious.

I just think that in this case it is prudent for us to be safe rather than sorry.

Thanks much,

Ed

Subject: PBS NewsHour inquiry for today

Dr. Fauci,
Might you be available to update our viewers on the latest developments in the coronavirus story today/tonight? We are particularly interested in getting your evaluation of the passengers who have been released from two cruise ships. The first, in Yokohama, Japan, where over 300 Americans released from the ship have now arrived back in the US, to go into 14 days of quarantine. 14 of those people tested positive at some point after leaving the ship, but before they boarded the plane. The second ship we want to focus on is in Cambodia. Something in the neighborhood of 1,000 passengers released from that ship have been reported to be in some state of travel to their homes, presumably around the globe. One woman who made it as far as Malaysia tested positive there and is hospitalized in Kuala Lumpur. We do know that the CDC is working with WHO and the cruise ship line to track down those traveling people.

We would very much like to hear from you what level of concern we should have over those many hundreds of people traveling right now, how well quarantine works, how important it is to maintain it, etc. We would also like to touch on the methods of containment and treatment being done inside China and how well those methods have worked.

I realize it is a holiday, and that could complicate things. But please let me know whether you could consider this, Doctor, and we will begin to work out the logistics.

Thank you.

Very best regards,
Dave

Hi Patty,

Mike with cnn and new day here

Hope all is well

We are interested in checking Dr Fauci's availability for Tuesday's show.

May you let me know if he is avail and what time frame works best?

Topic is Coronavirus

Thanks!

M

Subject: Comments re: 14 US passengers with coronavirus and updates

Hi Dr Fauci,

I hope this note finds you well and that you've gotten a little rest over the weekend, during what I'm sure is an inordinately busy time. Would you be able to elaborate on the measures taken to keep the 14 US evacuees who have coronavirus from infecting others on board the plane? I know that remdesivir, under compassionate use, was given to at least the first American coronavirus patient, and last week NIH researchers published results early that it had preventive effects for macaques exposed to MERS. Has the US considered using this drug to protect those exposed to but not yet infected with coronavirus?

Thank you,

Natalie A Rahhal
Acting US Health Editor

To: Jon LaPook
Subject: RE: Coronavirus

Jon:
I have no idea what this guy is talking about. I have never said the R0 was close to 5 or 6. The R0 is about 2.0 to 2.2. Also, the situation is as we have discussed on several occasions. In the USA, the travel restrictions seem to be working with only 15 cases in the USA (13 travel and 2 spouses). But, as I have said, this could change. If we get substantial sustained transmission in a number of countries throughout the world, including the developing world, then sooner or later there will be significant leakage of infected individuals into the USA since you cannot restrict incoming travel from the whole world. The way we might be able to avoid a real global pandemic is if the non-China countries can contain the infections in their respective countries before there is widely distributed sustained transmissions. Once widely distributed sustained transmissions happen, a global pandemic is inevitable. What would a global pandemic mean? It depends on the true rates of morbidity and mortality. The currently reported mortality of COVID-19 is about 2%. However, there are several folds more cases than are coming to the official attention of health authorities, i.e. asymptomatic or minimally symptomatic infections. If you count these, the denominator gets much larger and the case fatality rate could drop to 1% of even 0.5 % or less. If that is the case, then this could be a very severe seasonal flu (0.2% to 0.4%; regular seasonal flu is 0.1%) or a typical pandemic like 1957 or 1968 (0.5% -0.9 %). We are not sure where it is going to land.
Hope this is helpful.
Best,
Tony

Hi Tony,
I thought you would be interested to see a text (below my email) I just got from a very smart Wall Street guy who has been filling me in on reaction there. I've been doing my best on air to put the current situation in perspective - communicating that the risk in the U.S. is still relatively low while letting viewers know the situation is fluid and could change. How would you sum up where we are now?
Thanks,
Jon

TEXT I JUST RECEIVED:

"Doc, total panic mode setting in . Tony Fauci talking R nought at closer to 5 or 6. Good biotech guys saying it might not die down in April. People talking about 60% of us will get it ; unstoppable in Africa. I can't scare people but this is really bad. I hate bothering you on this but I know I need to take my cue from what you will say on CBS"

Cliff;

I am attaching 2 documents: 1) The revised manuscript that Greg worked on in which I have added a number of tracked changes including deleting a substantial amount to get it between 800 and 900 words; and 2) A clean version where I have accepted all the tracked changes (Greg's and mine). Right now I like it the way it is and would not change it much if at all. What it needs now is references. Greg will take a shot at adding the references. If you have references, please send them to Greg and me. In the meantime, I will send it without references to Bob Redfield for his review/approval. Let us discuss by phone if you wish.

Thanks,

Tony

Dear Doctor Fauci,
I am a pediatrician from (b) (6) (IT).
I was wondering if high doses of vitamin A have been tried in the therapy of COVID-19.
Do you remember the cases of viral pneumonia due to measles that take place in African infants in the late seventies.
It seemed to work.
Many sorry to bother you.
Have a good job!
Best regards
Cesare Cocchi MD

Subject: Dr. Fauci video request: Public Service Recognition Week

Hi there,

Please see below. HHS is taking over the Partnership for Public Service IG account next week for Public Service Recognition Week. They asked if Dr. Fauci would be willing to do a short 30-second or less pre-recorded video thanking public servants for their work. It would be featured during the takeover, and also on NIH's other sm handles next week. It can be taken on a cell phone as sm does not require higher resolution. Let me know if you would like to accept or decline the request.

Many thanks,
Kim

Subject: Public Service Recognition Week

Hello All,

Hope everyone is holding up well!

OHR is taking over the Partnership for Public Service (PPS) Instagram account during Public Service Recognition Week (May 3-9, 2020). The OHR team has reached out about wanting to develop a senior leader "mashup" video —perhaps including the DepSec. T

They asked about the feasibility of this request. They also inquired about perhaps Dr. Fauci and the SG doing a pre-recorded video thanking public servants for their work.

I wanted to gather the troops so we can identify what all is being planned for this week of recognition and provide a POC for OHR if the request is feasible.

Happy to set up a call, if that is needed to discuss further.

Thanks,
Janell

Subject: FOR ASF REVIEW: Draft PR re: launch of ACTT 2 COVID treatment study

Hi Dr. Fauci,

Please find attached for your review a draft press release to announce the launch of the ACTT 2 COVID-19 treatment trial (remdesivir and baricitinib). Below is your draft quote:

"We now have solid data showing that remdesivir diminishes **to a modest degree** the time to recovery for people hospitalized with COVID-19," said NIAID Director Anthony S. Fauci, M.D. "ACTT 2 will examine if adding an anti-inflammatory agent to the remdesivir regimen can provide additional benefit for patients, including improving mortality outcomes."

The trial may start enrollment tomorrow.

Thanks much,
Kathy

Spike mutation pipeline reveals the emergence of a more transmissible form of SARS-CoV-2

Korber B[1], Fischer WM[1], Gnanakaran S[1], Yoon H[1], Theiler J[1], Abfalterer W[1], Foley B[1], Giorgi EE[1], Bhattacharya T[1], Parker MD[3], Partridge DG[4], Evans CM[4], de Silva TI[4,5], on behalf of the Sheffield COVID-19 Genomics Group[#], LaBranche CC[2], and Montefiori DC[2]

Summary

We have developed an analysis pipeline to facilitate real-time mutation tracking in SARS-CoV-2, focusing initially on the Spike (S) protein because it mediates infection of human cells and is the target of most vaccine strategies and antibody-based therapeutics. To date we have identified fourteen mutations in Spike that are accumulating. Mutations are considered in a broader phylogenetic context, geographically, and over time, to provide an early warning system to reveal mutations that may confer selective advantages in transmission or resistance to interventions. Each one is evaluated for evidence of positive selection, and the implications of the mutation are explored through structural modeling. The mutation Spike D614G is of urgent concern; it began spreading in Europe in early February, and when introduced to new regions it rapidly becomes the dominant form. Also, we present evidence of recombination between locally circulating strains, indicative of multiple strain infections. These finding have important implications for SARS-CoV-2 transmission, pathogenesis and immune interventions.

Subject: Re: Dr. Anthony Fauci & Avi Schiffman/The Webby Awards

HI Courtney,

This would be a pre-recorded message with Dr Fauci solo. He would set up Avi's award and help to celebrate his Webby moment for him. Avi will be sending us his 5 word Webby speech which will then follow Dr. Fauci's intro. Below is a draft of the introduction for him, let us know if he would like to make any edits/changes. I've also attached the format for taping on his phone/computer. Please let me know if you need any additional information and hoping we can make it work.

Thank you so much

Best

Lesley

DR. FAUCI:

I'm Dr. Anthony Fauci. Unfortunately, you've seen a lot of me lately. But thankfully, I'm here to present some good news and I'm excited for the opportunity to shine some light on one of the many young people who have stepped up and helped us throughout a difficult time.

The 24th Annual Webby Awards would like to honor Avi Schiffmann as the 2020 Person of the Year to recognize his creation of ncov2019.live to track the spread of COVID-19 across the world.

As we collectively navigate the severe impact of COVID-19, including the difficult, but critical calls for nationwide social distancing, the Internet has become the lifeblood of people looking for accurate information about the novel coronavirus and the necessary steps to combat it.

Since launching the site on December 29th, Schiffmann's tracking tool has been an invaluable resource that sounded the alarm on the virus and its spread, notably calling attention to its severity long before many global officials.

At a time when the spread of misinformation can be so detrimental to our efforts, the site has provided over 600 million visitors with accurate real-time data. Schiffmann has helped people around the globe understand COVID-19 and the necessity of upgrades to current health care systems and the importance of measures to flatten the curve.

For having the foresight to track the global spread of COVID-19 and for creating an essential website to provide real-time data about the virus to people everywhere, it is my great privilege to honor Avi Schiffmann as the 2020 Webby Person of the Year.

Hi Courtney,

Hope you are staying well during these uncertain times. I am a Talent Producer for The Webby Awards and had reached out to Dr. Fauci regarding being involved in our "virtual" internet celebration which will showcase the artists, organizations, and creators using their platforms to imagine a better tomorrow through information, education, movement, comedy, all while inspiring audiences to take action to enact positive change.

Avi Schiffman is being celebrated as our Person of the Year and we would be honored if Dr Fauci would "virtually" present him his honor. The official letter is below and would love to discuss in more detail when you have a chance to review.

Thank you

Best

Lesley

Hailed by The New York Times as "the Internet's highest honor," The Webby Awards has been the premiere award for online excellence for over two decades, honoring the companies and people who have critically shaped digital technology and culture.
> >
> > This year, due to the impact of the coronavirus The Webby Awards are moving their renowned award show to an online experience. On May 19th, 2020, the 24th Annual Webby Awards will bring together Webby Winners from around the world in an Internet Celebration which will showcase the artists,

organizations, and creators using their platforms to imagine a better tomorrow through information, education, movement, comedy, all while inspiring audiences to take action to enact positive change.

The 24th Annual Webby Awards are proud to honor Avi Schiffmann as the 2020 Person of the Year to recognize his creation of ncov2019.live to track the spread of COVID-19 across the world. We would be honored if Dr. Fauci would "virtually" present Avi with his award.

As we collectively navigate the severe impact of COVID-19 on the world and late calls for nation-wide social distancing, the Internet has become the lifeblood for people looking for accurate information about the novel coronavirus. Since launching the site on December 29th, Avi Schiffmann's tracking site was a necessary tool that sounded the alarm on the novel coronavirus and its spread, notably calling attention to its severity long before many global officials. By providing over 100 million visitors with real-time data on the virus' spread, Schiffmann has helped people around the globe understand COVID-19 and the necessity of upgrades to current health care systems and measures to flatten the curve.

For having the foresight to track the global spread of COVID-19 and for creating a website to provide real-time data about the virus to people everywhere, it is our great privilege to honor Avi Schiffmann as the 2020 Webby Person of the Year. The celebration will highlight the important work Avi and his fellow winners are doing, and will mark his hallmark Webby 5-Word acceptance speech in Internet history. Dr. Fauci's presenter speech could be recorded on his phone and we can send you through a script for him to review, edit and details for format and deadline.

This year's Webby Awards will also take action, the impact of COVID-19 and government responses around the world, has brought the importance of voting into sharp focus. The Webby Awards has partnered with Vote.or and aim to check the voter registration status of 1 million voters in the United States, promoting the importance of voting to help ensure voter turnout this November is the highest it has ever been. This partnership will integrate into all elements of this year's online celebration.

Our thoughts are with all of you in this difficult time.

Best

My name is Konstantin Vulkov and I am Program director of the biggest Bulgarian private radio station, Darik radio (www.darikradio.bg). This is a news/talk radio station. I am a regular contributor to Bulgarian National TV as well as several online and print publications, editor-in-chief of egoist.bg as well as editor-in-chief of the biannual Darik-owned publication called Dolce Far Niente.

I am a document photographer as well, focusing mainly on portraits.

I am covering the coronavirus pandemic extensively - visiting COVID-19 units across the country, making my daily radio programme "Mind games", writing stories for our websites www.darikradio.bg. www.dnews.bg and egoist.bg.

It would be an honour if I can make a short telephone interview with Mr. Anthony S. Fauci, M.D.

Please let me know if I can call and make the interview. I promise I won't take more than 10 minutes of Mr. Fauci's time.

Your help is much appreciated.

Best,

Konstantin

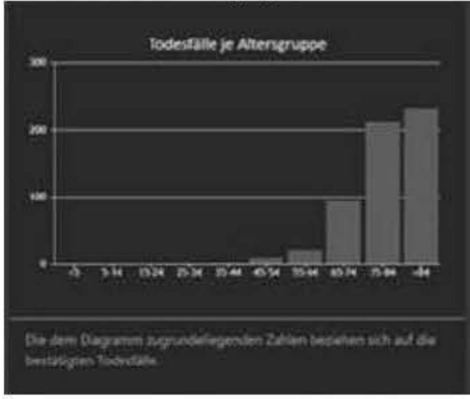
> After running the numbers available on COVID 19 pandemic data – my experiences as an Economist led to following analysis and proposed strategy:

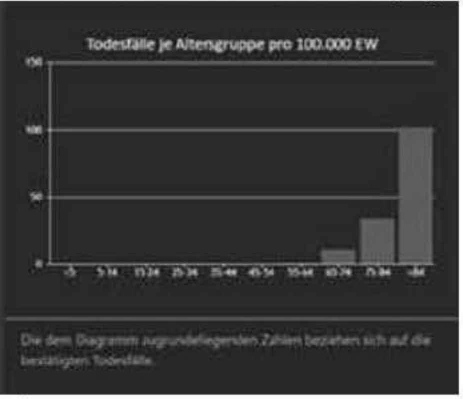
COVID 19 is a true threat for humans >65 years of age with pre-existing illnesses,
but nearly influenza-like for humans < 65 years of age and humans > 65 years of age without pre-existing illnesses

AUSTRIA: Deaths by age

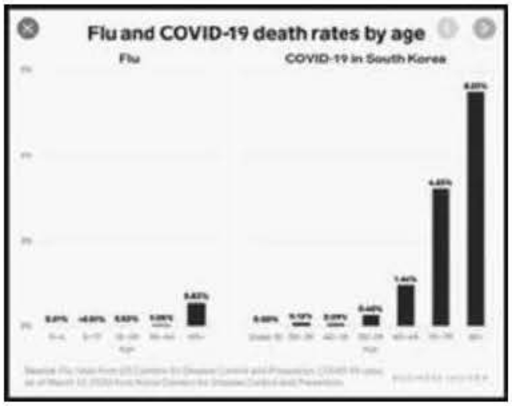


Die dem Diagramm zugrundeliegenden Zahlen beziehen sich auf die bestätigten Todesfälle.

Deaths as of 100.000 inhabitants by age

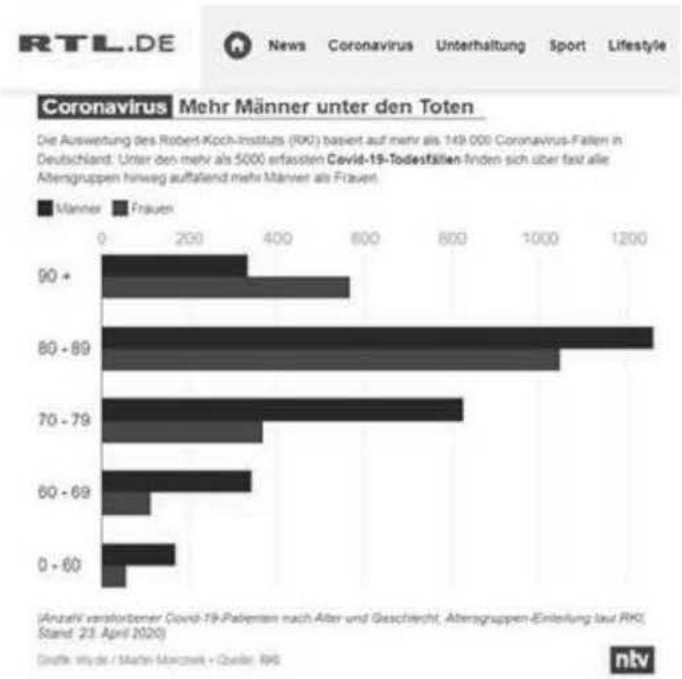


Die dem Diagramm zugrundeliegenden Zahlen beziehen sich auf die bestätigten Todesfälle.



Germany – Death by age – men and women – mortality rate in %

Comparison – Italy and China

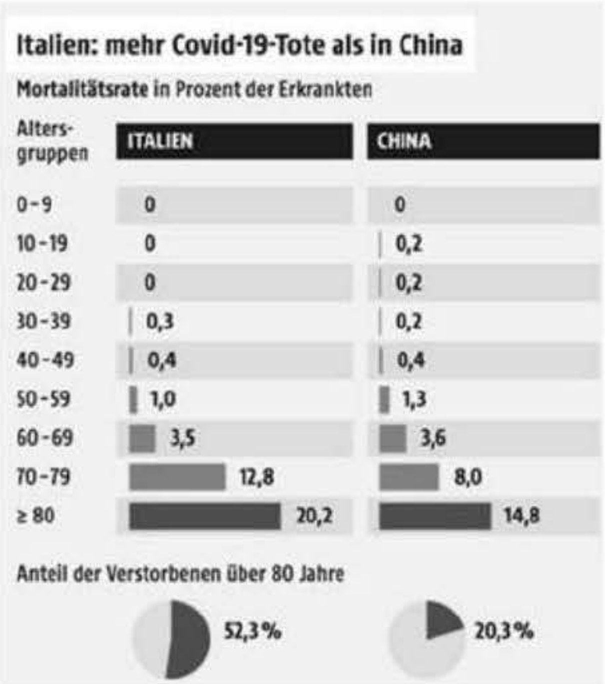


Coronavirus Mehr Männer unter den Toten

Die Auswertung des Robert-Koch-Instituts (RKI) basiert auf mehr als 149 000 Coronavirus-Fällen in Deutschland. Unter den mehr als 5000 erfassten **Covid-19-Todesfällen** finden sich über fast alle Altersgruppen hinweg auffallend mehr Männer als Frauen.

(Anzahl verstorbener Covid-19-Patienten nach Alter und Geschlecht, Altersgruppen-Einteilung laut RKI, Stand: 23. April 2020)

Grafik: ntv.de / Martin Morcinek • Quelle: RKI



Italien: mehr Covid-19-Tote als in China

Mortalitätsrate in Prozent der Erkrankten

Altersgruppen	ITALIEN	CHINA
0-9	0	0
10-19	0	0,2
20-29	0	0,2
30-39	0,3	0,2
40-49	0,4	0,4
50-59	1,0	1,3
60-69	3,5	3,6
70-79	12,8	8,0
≥ 80	20,2	14,8

Anteil der Verstorbenen über 80 Jahre

Proposed Strategy

1. **Keep the virus 100% (totally) away from people older than 60 with pre-existing illnesses**

Identify, Testing, Shelter, Preserve from contact with virus, Preserve from Hospitalization and ICU

2. **Minimize possible contact with virus for people older than 60 without pre-existing illnesses**
   Identify, Testing, Partial Stay at Home, Social Distancing, , Preserve from Hospitalization and ICU

Once 1 and 2 are warranted:

3. **Handle the rest of the population with care, but keep them going and working – as you would do in an influenza-season**
   The critical factor for further intervention is the capacity of the regionally available ICU-capacity
   Interventions: Social Distancing, Masks, Testing, Tracing, Stay at home when ill, Quarantine at home when ill

Respectfully Yours
Gerald Glockenstein

Subject: SARS-CoV-2

Dear Zhu,
The COVID-19 pandemic poses an unprecedented threat not only to global public health but also to economic and political stability. Uncertainty about the origin of COVID-19 pandemic is causing friction worldwide, particularly between China and the United States. There is agreement that the causative agent, SARS-CoV-2 originated in a bat. There is also a high level of confidence that the virus was not deliberately modified in any laboratory. What we do not know is the answers to two questions: (1) whether a precursor virus circulated in the human population before it evolved to become a pandemic virus and (2) whether a precursor virus adapted to humans by first passing through another animal. Subject: CORONA and BACTERIAL SUPERINFECTION

Dear Doctors,

I don't know if you have got this infomation.

A truly deadly virus

cannot spread very far. Why? Because people quickly get sick and die. In other words, they cannot spread the virus further, which is a prerequisite for a large spread like corona. Covid-19 has spread throughout the world.

The premise is that it is not very dangerous, it causes mild symptoms for most people, many do not even notice that they were sick. But the virus has different phases in the body, after a while it goes into a resting phase, you feel better, but the virus is still present and can pass on. Covid-19 is an optimally developed virus that spreads rapidly around the world. But if it were really deadly, almost everyone would die.

So far in our 4 billion long history, there have been **no airborne** viruses or bacteria. Yes, in the hollywood movie "outbreak" there was, but it was a movie. Why hasn't it?

If it had existed, this planet would have been a dead planet without life. It would have killed all living. It is possible that there is somewhere else in the universe, but not here on planet Earth. Not now. Remember, this is not the first time a new virus is spreading in the world. What is happening now has happened earlier in our long history.

But people are die you say. Yes, but the virus don't kill them. The virus open a "door" in the cell wall thats allows for bacterias, how always are present, to invade the body and create an aggressiv bacterial superinfection. That's what kills them. See,

1. Influenza and Bacterial Superinfection: Illuminating the Immunologic Mechanisms of Disease.

NETs
CD4⁺
γδ
IL-17A
IL-22
Phagocyte

FIG 1 Common pathways of susceptibility to postinfluenza bacterial superinfections. Early after influenza virus infection, mice show reduced susceptibility to superinfection that is at least in part due to increased production of IL-13. This IL-13-rich environment does not permit IFN-γ production, allowing unaltered phagocytosis and clearance of bacteria. The role for either neutrophils or macrophages (phagocytes) in bacterial clearance early during influenza virus infection has not been fully investigated. Progression of influenza virus infection results in increased susceptibility to secondary infection. Type I IFN (or IL-27) signaling initiated in response to influenza virus infection results in downregulated production of IL-1β and Il-23 and impaired type 17 immune responses. Inhibition of IL-17 and IL-22 reduces production of antimicrobial peptides. Type I IFN signaling also reduces levels of neutrophil chemoattractants Cxcl1 and Cxcl2 and can induce formation of NETs. IL-27 induced during influenza virus infection further suppresses IL-17 production but stimulates production of regulatory cytokine IL-10, which contributes to increased susceptibility to superinfection, presumably by alteration of the anti-influenza inflammatory response. IAV, influenza A virus infection.

6. Predominant Role of Bacterial Pneumonia as a Cause of Death in Pandemic Influenza: Implications for Pandemic Influenza Preparedness

How can this happen? How can the doctors be so blind. I have a theory about this and here it comes:

My (b)(6) was a psychologist. May she rest in peace in heaven.

It seems that the corona virus has affected the brain more in a certain group in society, namely politicians, doctors, journalists and other with power and positions in the society. The virus is not dangerous for this group, but it's opens a door in the brain's cell wall that allows it to enter the fear center of the brain.

This door has been closed for many years. We haven't had any major wars and nothing has threatened them. They have felt invulnerable. Convinced of their own superior ability and greatness. Not only can they control the people, they can now control the climate by turning the carbon dioxide tap. If they close it, the temperature drops, if they open it the temperature goes up. They don't know that the sun is 109 times as big as our planet. 109 times. It seams so small when we look up in the sky. They thought they could control everything.

Then came the VIRUS, they receive an abrupt awakening. They get scared. Politicans get sick and die. Doctors die. The brain is attacked by fear virus. They can no longer think clearly and logically. The panic is near, they are reminded of their own mortality. Just like a virus in a computer. It's slows it down and it becomes unusable. Thats whats happen when a fear virus attacks the brain.

Here where I live, there are panic over 1600 confirmed cases. The televison is talking "infected persons" when there is "confirmed laboratory cases". It's two different things. Misleading the people. Why panic over 1 600 infected? Closing all not nessecary buissness, all schools, all except for supermarket, gas station, banks. You can't go out after 5.00 pm. If you do, you get arrested.

Why? They are scared. Because the ruling class is afraid. Everyone with this masks. Doctors crying on television. The President with mask. They are scared. Doctors. Journalists. Polices.

2020. The year when the world got completely crazy.

You have an medical obligation to inform the world about the truth.

Kind regards,

Ola Melhus

Subject: Invitation to join (virtually) the ACTIV Leadership Meeting 5/6

Dear Colleagues,

As you may be aware, the Accelerating COVID-19 Therapeutic Interventions and Vaccines (ACTIV) public-private partnership has been moving forward rapidly to address the global pandemic. We held our initial ACTIV leadership meeting on April 3rd including, NIH, FDA, BARDA, EMA, and industry heads of research and development. Four working groups were formed out of this meeting to focus on preclinical therapeutics, clinical therapeutics, clinical trial capacity, and vaccines.

Although some ICs have representatives participating in the working groups, we recognize there is a need to keep everyone looped in to the various activities and progress of the partnership, particularly in view of all of the concurrent IC projects about COVID-19. The ACTIV working groups will be delivering their second report to the **ACTIV Leadership Group on Wednesday, May 6, from 3:30-5:00pm**. I am writing to invite the ICDs to listen-in on this meeting. There will be a lot to cover during the meeting and the members of the Leadership Group will be asking the questions. But to give a chance for us NIHers to discuss what has been presented, I am scheduling a separate ICD call for 5:05-5:30pm, immediately following the ACTIV leadership meeting.

If you are available to take part, please send your responses to David Wholley and Cheryl Melencio of FNIH (cc'd here) by noon tomorrow, May 5th. Once you confirm your attendance, Cheryl will send you a calendar invite for both the ACTIV leadership meeting and the ICD follow-up call.

Best regards,
Francis

Hi Tony,

I can only imagine your schedule. Thank you for all you are doing for the country in our fight against this virus.

Weill Cornell would like to invite you for a 3 min remarks to the Class of 2020 at their upcoming graduation if your schedule allows. The virtual graduation is on May 28th. We can tape your remarks at any time which fits your schedule, from now or up to right before May 28.

If you able to accept this invitation, please let me know. If not, totally understandable and we would love to have you back again after covid subsides.

Thanks again!

I understand that you are evaluating several mRNA formats with BioNTech. If one of those turned out to be ready for phase II/III in late June, we would be most interested in the possibility of including that in the master protocol. Please keep Tony and me in touch with Pfizer's progress, including which mRNA format you choose to move into advanced development.

Hi Francis

We certainly enjoy taking part in ACTIV

I will check if we did get our drugs on the lists below

[redacted] (b) (4)

I will discuss w Kathrin Jansen if we may have an option to add one of our several vaccine formats that is less advanced or a refined format of our most advanced in the master protocol etc

If we can agree about shared key endpoints , we can include that cross all studies Whether master protocol or more advanced sponsor trials which helps comparison

Happy to discuss w you and welcome your advice

Hi Mikael,

Thanks for your note and this update on exciting progress on several fronts. ACTIV is moving forward with gratifying speed and commitment. With regard to vaccines, tomorrow the ACTIV vaccines WG will be discussing a master protocol for a phase II/III trial with adaptive design, multiple arms, and a shared placebo arm, aiming to launch on or about July 1. FDA is strongly supportive. The Moderna, Sanofi, and JnJ vaccines are likely to be included – might Pfizer also join?

(b) (4) – I trust that compound is on the list of therapeutic candidates that the Clinical Therapeutics WG of ACTIV is reviewing? They are supposed to put forward a tentative list for the Wednesday Leadership Group meeting. Ditto with the (b) (4) option!

Looking forward to catching up soon!

Best, Francis

Hi Francis

I trust you are well but likely working too many hours as we all experience in the difficult Covid times.

In the vaccine space we have progressed rapidly and are already in phase 1/2 studies dose escalation phase testing multiple format of mRNA vaccine . Key for us is (b) (4) .

In the anti-viral areas we are (b) (4)

We also want to start (b) (4)

[redacted] (b) (4)

How are things going w ACTIV.
Any issues to discuss ?

I hope our PFE representatives in ACTIV are helping out well

Pls let me know if there is anything particular to discuss or I can help you with

Best personal regards
Mikael

I hope you are having a good weekend.

Quick question: Would you be OK if I/we reached out to Joe Menetski, who I understand leads many of the ACTIV efforts. We have come to know Joe very well as a great collaborator on the AMP gene therapy initiative and It would be very easy I think working informally with Joe to look a bit more under the hood and identify/ map opportunities for alignment with the other initiatives.

All the Best,
Morten

Hi Tony,
Thanks! Hope you are doing well.
This is basically exactly what we are working to facilitate with our RADx and digital health (app) platform initiatives...greatly expanding testing and creating a digital backbone to provide people with ways to access tests and interpret results. For expanding testing platforms, see https://www.nibib.nih.gov/news-events/newsroom/nih-mobilizes-national-innovation-initiative-covid-19-diagnostics We have >700 applications that have been started in just a few days. For the digital health (e.g. app) platform we've put a lot of thought into the design and are hoping a contractor will be able to launch a pilot study of healthcare workers soon. Ned and I plan on issuing additional calls in this area with multiple institutes as stakeholders in the coming weeks.
Best,
Bruce

Dear Tony,

1. I had planned to write to thank you for giving an interview [redacted] (b) (6) for the Washington Post last month. Your generosity with time was 'all Tony,' and I did appreciate it. I was waiting for the chaos around you to subside before writing but.....
2. Last evening I was asked to forward the message below to you. You might already know Jack Warren, Professor of Medicine and Infectious Diseases at U. Maryland ([redacted] (b) (6) As his email says, [redacted] (b) (6) with Samsung's venture capital group, which has an idea for a future, comprehensive surveillance system for COVID-19 [redacted] (b) (4) It is interesting, but all I know is what I read in the power-point attached. I cannot imagine you would have time to look at it yourself, but perhaps it could be shared with other systems-oriented individuals working towards 'opening up' responsibly.

Pardon me for stepping out of my normal NTD 'swim lane' but I did want to help out [redacted] (b) (6), and certainly nothing is more important these days than COVID-19 and the outstanding work you are doing to manage it.

All the very best,

-Eric

Eric

A voice from the past. Covid-19 prevented us from meeting up [redacted] (b) (6) but I'm writing because it might yet bring at least the two of us together.

[redacted] (b) (6) Samsung's venture capital group and his team has what I think is an incredibly useful idea for contact tracing for covid-19 as well as actually opening the economy up again. The idea is contained within the attachment.

I wonder if you still have any contacts with Anthony Fauci. Is so, could you see your way clear to forwarding the attachment to him? The group has identified some appropriate test manufacturers but is at the point where they need to know the spectrum so as to focus on the optimal ones. The thought was that Tony Fauci might be the best person to know what tests are in development stage.

What are your thoughts?

Don’t worry about confidentiality; they want to widely share this idea so as to get it out as quickly as possible.

Thanks

Dear Dr. Fauci,

I hope you and the family are all safe and healthy during these challenging times. Hailed by The New York Times as "the Internet's highest honor," The Webby Awards has been the premiere award for online excellence for over two decades, honoring the companies and people who have critically shaped digital technology and culture.

This year, due to the impact of the coronavirus The Webby Awards are moving their renowned award show to an online experience. On May 19th, 2020, the 24th Annual Webby Awards will bring together Webby Winners from around the world in an Internet Celebration which will showcase the artists, organizations, and creators using their platforms to imagine a better tomorrow through information, education, movement, comedy, all while inspiring audiences to take action to enact positive change.

The 24th Annual Webby Awards are proud to honor Avi Schiffmann as the 2020 Person of the Year to recognize his creation of ncov2019.live to track the spread of COVID-19 across the world. We would be honored if Dr. Fauci would "virtually" present Avi with his award.

As we collectively navigate the severe impact of COVID-19 on the world and late calls for nation-wide social distancing, the Internet has become the lifeblood for people looking for accurate information about the novel coronavirus. Since launching the site on December 29th, Avi Schiffmann's tracking site was a necessary tool that sounded the alarm on the novel coronavirus and its spread, notably calling attention to its severity long before many global officials. By providing over 100 million visitors with real-time data on the virus' spread, Schiffmann has helped people around the globe understand COVID-19 and the necessity of upgrades to current health care systems and measures to flatten the curve.

For having the foresight to track the global spread of COVID-19 and for creating a website to provide real-time data about the virus to people everywhere, it is our great privilege to honor Avi Schiffmann as the 2020 Webby Person of the Year. The celebration will highlight the important work Avi and his fellow winners are doing, and will mark his hallmark Webby 5-Word acceptance speech in Internet history. Dr. Fauci's presenter speech could be recorded on his phone and we can send you through a script for him to review, edit and details for format and deadline.

This year's Webby Awards will also take action, the impact of COVID-19 and government responses around the world, has brought the importance of voting into sharp focus. The

Webby Awards has partnered with Vote.or and aim to check the voter registration status of 1 million voters in the United States, promoting the importance of voting to help ensure voter turnout this November is the highest it has ever been. This partnership will integrate into all elements of this year's online celebration.

Our thoughts are with all of you in this difficult time.

Best

Lesley Cahill Roy

Dr. Fauci- Of course, I appreciate how busy you are, so just reaching out again on behalf of the American College of Cardiology as noted below. We were hopeful we could steal just an hour of your time in June for an important discussion on COVID-19 and exercise training. This is part of a virtual agenda for one of our national conferences (Care of the Athletic Heart) with outreach around the world given this is a part of the ACC educational platform.

We hope this is something you have the bandwidth for, and simply appreciate your consideration. I hope to hear from you and thank you for all your service once again.

My best, Jonathan Kim

Subject: INVITE- American College of Cardiology

Dr. Fauci-

On behalf of the American College of Cardiology (ACC), first I would like to thank you for your tremendous service throughout your incredible career and certainly during these present and challenging times. We are indebted to your service and thankful everyday we have you to help guide public health measures through the COVID-19 pandemic.

I am a member of the Sports and Exercise Council for the ACC and the Course Chair for our annual ACC Care of the Athletic Heart Conference. Originally scheduled June 18-20, 2020 at ACC Heart House in Washington DC. I am also faculty at Emory University and direct our sports cardiology program in Atlanta.

Of course, we have made the difficult decision to cancel our live meeting in June, but myself along with the staff at ACC are working very hard transitioning the course to a virtual course and agenda. This course will be a much shorter version and the agenda will all be pre-recorded and distributed as a 'live simulated version' on June 20, 2020.

With the impact of COVID-19 on all aspects of life and society, in our academic world of sports cardiology, we are dealing with how COVID has impacted exercise and athletes. As you can imagine, there are a multitude of different issues and questions that colleagues are raising.

One new session for our virtual agenda that we think will generate a lot of interest and is of high importance will be a panel discussion on sports, exercise, and COVID-19. We would like to get additional expertise on the panel from the ID/public health and Sports Medicine arenas, in addition to sports cardiology. Of course, there is no one that carries the expertise you do from the ID and public health perspective and we would be extremely honored if you could be a part of this one session and join our faculty for the course.

Before getting into more details and a formal invite from the ACC, I wanted to first see if you had the bandwidth for this. Understanding you are as busy, if not busier, than anyone in the world right now. This session would be pre-recorded and we would certainly work to be flexible with anytime you had for this in early June to record.

I hope this is something that could work- again we would be honored to host you virtually.

Many thanks for considering, and hope to hear from you soon. Best, Jonathan Kim

Dear Dr. Fauci,

I hope to find you well with this email.
I take the liberty to write you because I have some concern about the misinformation
that can discredit your task and honors.
On many occasions in tv and press, Antonio Giordano, Director of Sbarro Institute in Philadelphia,
Keeps saying that he is a member of the USA Task Force.
I'm wondering if it's true.

I work in UK, but I'm originally from Naples (Italy).
I held my PhD in Carlo Croce's lab at OSU and I specialized in immunotherapy at University of Chicago.
Currently I'm a research fellow at University of Sussex.

I apologize if you find this email inopportune, the time is unfortunate, I grant you.
I don't like the idea that some people might take advantage of this very unpleasant moment for all the world.
So I wish that I made a mistake this time.

I'm also wondering if you are willing to release a brief interview.
I stand with you and USA that I miss very much

I really appreciate your time
Thank you
Kind Regards
Ciao ☺

Dear Dr. Fauci

Hello from Cuba.

Have been a long time we haven't been in touch.

Now the whole world is facing a new epidemic and in Cuba we are working in order to controling. We will like to re-new our contact regarding this disease Covid 19, we prepare a telephone conference in order to exchange ideas to have a better understanding to control the epidemic. This conference will be held from Cuba next tuerday 05/05/2020 at 4:30pm Cuban time. In clouse I am sending the topics. We will like to have you and Dr. Handley in this activity if it is possible to attend this conference. If you are in agreement we will like to know by answering this email and them we will you any other detail.

If you have any other person to contact in order to participate will be helpfull for us.

Waiting for your answer.

Dr. Jorge Perez
IPK
Cuba

Preliminary program

Objectives:

- Updating COVID-19 situation at global, regional and mainly in Cuba and USA
- To sharing data of how our two countries are facing this emergency including research studies, etc

Topics for the discussion:

- The main strategies that both countries are developing to face COVID-19.
- Diagnostic strategy
- Clinical management in adults and children
- Innovative Cuban biotechnology products incorporated into the treatment models used in the different stages of treatment
- Some other research studies
- Discussion

Events and courses at the following address:

Subject: RE: FY 2020 - COVID-19 - Actual and Forecasted Spending - Weekly Report Ending 4/10/20

Tony,

YTD spending is $67.5M, unchanged* from last week. A summary is attached.

I have also attached an updated budget plan reflecting our projected spending by research category by fiscal year. We are updating this weekly as we receive updates from the divisions on the timing of clinical trials, observational studies, natural history studies and research resource needs.

We will report mid-week on our YTD spending which will be in sync with the data the Dept. extracts.

Martin

- The reason that we have reported no weekly increase is to match our reported spending with the financial information that the Department is now extracting from our accounting system. We have always included spending from our regular appropriation, as directed by the Department. Now the guidance from the Dept. has been updated to report **only** spending from the supplemental COVID-19 appropriations.

Subject: RE: FY 2020 - COVID-19 - Actual and Forecasted Spending - Weekly Report Ending 4/3/20

Tony,

YTD spending is $67.5M , a weekly increase of $45.9M mostly for initial funding for set-up of clinical trials for evaluation of remdesivir in patients with early disease stage and a placebo-controlled clinical trial of intravenous hyperimmune immunoglobulin (IVIG) in patients with COVID-19.

I've provided a summary spending plan the team worked on and a table for the $1.532B that we have received in supplemental appropriations

- $826M NIAID received 3/5/20 - the Coronavirus Preparedness and Response Supplemental Appropriations Act
- $706M NIAID received 3/25/20 - the Coronavirus Aid, Relief, and. Economic Security (CARES) Act

In the last document I've also included narrative summarizing activities funded by the $249M Other NIH Institutes received in the CARES Act

Martin

Subject: RE: FY 2020 - COVID-19 - Actual and Forecasted Spending - Weekly Report Ending 3/26/20

Tony,

YTD spending is $21.6M , a weekly increase of $4.0M for clinical trial site set-up for therapeutics, further vaccine development, small animal development, and therapeutic development (mAbs) and basic research.

Most of the $50M-$60M we listed last week we expect to be awarded before March 31. In many cases contractors have begun work without the award so as to not stall work.

Early next week I'll provide a summary spending plan for the additional $706M that NIAID received in the supplemental appropriation signed by the President today.

Subject: RE: FY 2020 - COVID-19 - Actual and Forecasted Spending - Weekly Report Ending 3/12/20

Tony,

Since we our last report we have increased spending on the COVID-19 response by $1.5M for a total YTD spending of $14.1M.

The $1.5M increase is for the following:

> $1.0M awarded to set-up clinical sites at Emory and U. Washington Seattle for adaptable RCT of remdesivir.

$0.4M supported data analysis of rhesus animal model and grant to gain understanding of the host pathways that regulate viral gene expression and viral subversion of the host immune system.
$0.1M funded vaccine development at VRC and DIR

Subject: RE: FY 2020 - COVID-19 - Actual and Forecasted Spending - Weekly Report Ending 3/5/20

Tony,

Since we our last report we have increased spending on the COVID-19 response by $0.2M for a total YTD spending of $12.6M.

The $0.2M increase is for vaccine candidate development at NIAID Intramural Labs including RML. Costs are mostly for staffing and overhead and include a preclinical immunogenicity study designed to test the mRNA-1273 nCoV vaccine two-dose schedule in mice. The study will measure the immune response to this vaccine in an animal model in anticipation of clinical test in humans.

Subject: FY 2020 - COVID-19 - Actual and Forecasted Spending - Weekly Report Ending 2/27/20

Tony,

Since we our last report we have increased spending on the COVID-19 response by $2.3M for a total YTD spending of $12.4M.

A recap of the $2.3 million spent in the last week is as follows:

- $1.9M to set-up a Phase I trial (45 subjects) of the VRC/Moderna mRNA platform candidate at Kaiser Permanente Washington Health Research Institute (One of the VTEUs)

- $0.3M that supported University of Hong Kong researchers in the development of a RT-PCR test to detect SARSCoV2 from human samples. The group has now shared the tests and relevant reagents with over 30 labs globally to enable diagnosis of COVID-19.
- $0.1M vaccine candidate development at NIAID Intramural Labs

Zeke:

I did not "strongly" endorse it. I specifically said that it was not a knockout drug and was only a baby step in the direction of developing more and better drugs. I said that it was important because it proved in a well-powered, randomized, placebo-controlled clinical trial that one can suppress the virus enough to see a clinical effect, as modest as the effect was. I do not think I forced anything.

Happy to chat with you about it.

Best,
Tony

Dear Dr Fauci,

My greetings from India. I am a health economist and management professor at the Indian Institute of Management, Ahmedabad, India's premier management school. Also, i am a avid fan of your work even from pre-covid19 days.

I write to you requesting some time if possible to do a podcast of 45 minutes with you over zoom. The science and policy ecosystem in India i think would immensely benefit if you can offer your thoughts on what should be India's 12-month strategy going forward for COVID-19.

We have done some recent podcasts relatedly and they are listed her (https://m.soundcloud.com/healthcastbycmhs/).

If you agree, and we are flexible all of May, my communication head Mr. Deepak marked in the email will arrange the zoom logistics and make it as seamless as possible for you.

We will also go per your time zone conveniences and do this over webex/hangout/skype or phone call if that helps.

It would be a delight Dr. Fauci if you can join us in the conversation, looking forward to hearing from you. Our respectful namaste 🙏 from India for all the brave work you are doing.

My best, Chirantan

May 1, 2020

Dr. Anthony Fauci, M.D.
Director of the National Institute of Allergy and Infectious Diseases
Department of Health and Human Services
5601 Fishers Lane
Bethesda, MD 20892-9806

Dear Dr. Fauci:

Thank you for your tremendous steadfast leadership during this pandemic and health crisis. Our nation has not faced a crisis of this magnitude since the 1918 Spanish Flu, but we will travel this journey together and defeat this virus. In the end, the nation will become stronger and more prepared.

Your participation is requested in a Virtual Town Hall meeting hosted by ABC affiliate Channel 13 in Houston, Texas on Thursday, May 7, 2020 at 7:00 PM CDT. This town hall meeting will focus on testing and guidelines for re-opening our nation. It is scheduled to last an hour with 2 or 3 guests including yourself. Houston is the fourth largest city in the country and your knowledge and expertise would be most helpful in our fight to keep our infection and fatality rates low for this entire region and the State of Texas.

My office has been pushing testing and setting up testing sites since the first notification of the coronavirus. We currently have seven active testing sites and expanding each week to get to the mass testing necessary to flatten the infection rate.

Thank you for your consideration of this request and I look forward to participating with you in the Virtual Town Hall meeting. Again, thank you for your leadership. Please RSVP or if you have questions regarding this request with Glenn Rushing, my Chief of Staff at [redacted] (b) (6) and Lillie Coney, my Chief Policy Advisor at [redacted] (b) (6).

Very truly yours,

J

Sheila Jackson Lee
Member of Congress

Subject: RE:

Zeke:

I did not "strongly" endorse it. I specifically said that it was not a knockout drug and was only a baby step in the direction of developing more and better drugs. I said that it was important because it proved in a well-powered, randomized, placebo-controlled clinical trial that one can suppress the virus enough to see a clinical effect, as modest as the effect was. I do not think I forced anything.

Happy to chat with you about it.

Best,
Tony

Tony,

I hope you and [redacted] (b) (6) are doing well. You are doing an amazing job under difficult circumstances. And just know we prefer the "real" Tony to the Brad Pitt version!!!

I am a bit perplexed by your seeming strong endorsement of remdesivir. Was it just a bit forced?

My reading was the data were weak and in normal times for normal disease it is not enough to to approve. And very unlikely to really impact COVID-19 disease pattern--regardless of supply issues.

Stay safe

Subject: Requesting your assistance: Draft NIAID Statement for May 12 Senate HELP Hearing

Dr. Fauci:

In preparation for the upcoming May 12th COVID-19 hearing of the Senate Health, Education, Labor, and Pensions Committee (Chair: Sen. Lamar Alexander, R-TN), we have drafted the attached NIAID testimony, building on your prior testimony on COVID-19. Drs. Giroir, Hahn, and Redfield also have been invited to the hearing.

We expect that your testimony will be included as an insert to an HHS-wide testimony. At the request of NIH OD, we have incorporated into the draft COVID-19 activities across NIH.

The testimony has been reviewed by the Divisions and Drs. Lane, Harper, Marston, and Lerner, as well as Courtney Billet, Greg Folkers, Martin Johnson, and Laurie Doepel.

NIH OLPA has asked to receive your testimony for clearance by tomorrow, if possible.

Thank you for your help.

Hi Tony:

In advance of getting together with you and your team, I am forwarding a short presentation for you guys to look at. The key elements are follows:

[redacted] (b) (4), (b) (5)

[redacted] (b) (4), (b) (5)

We are prepared to discuss this with you and your team at any time that is convenient for you. As you may know, we are locked down here in the Research Triangle until May 15. If it makes sense, we could arrange a WebEx as an initial step.

Many thanks for the opportunity to share this with you!

All the very best,

Dani

Subject: RE: Coronavirus: Covid 19

Ato:

Thank you for you note. We will know soon whether hydroxychloroquine has any beneficial effects as the results of randomized, controlled trials become available. The pathogenesis of COVID-19 is still an open question. You are correct in that there is a more recent tendency to use ventilators only as a very last resort since oxygenation rather than ventilation appears to be key to recovery.

Best regards,

Tony

Subject: Coronavirus: Covid 19

Hi Dr Fauci,

Please find an audio attached of a doctor describing the experience with regards to covid 19 in the hospital. She seems to suggest covid 19 is a virus that rather attacks the blood cell, leading to respiratory and other organ complications, hence they need to loom at treatment in a different light. In the UK some hospitals have moved away from using ventilators due to the high death rate of those on ventilators, and are rather using ventilators for sleep apnea, as they are less invasive, and the results are much much better compared to invasive ventilators

There are some anecdotal observations I have also made. The infection rate in most African countries seem to be comparatively low, which could possibly due to the rate of testing being conducted. However the death rates are also comparatively very low. From initial information with regards to

hydroxychloroquine and some antimalaria drugs usage, it was suggested that those who were alleged to have had some benefits had mild symptoms of covid 19. I know some clinical trials have shown hydroxychloroquine not to be effective in the treatment of covid 19 in very ill patients. However, my hypothesis is, are the low death rates in Africa linked to the fact that malaria is very prevelant in Africa, and lots of Africans take antimalarial drugs, making them less susceptible to covid 19, hence the low death rate. Is there a similar trend in other countries where malaria is prevalent? Is there an unintended benefit of taking antimalarial drug (or other medication) before covid infection, or at the onset, making people less susceptible to covid19.
As I said, this is based on anecdotal observations.

Yours sincerely
Ato Stephens

Hi Tony:

In advance of getting together with you and your team, I am forwarding a short presentation for you guys to look at. The key elements are follows:

[redacted] (b) (4), (b) (5)

We are prepared to discuss this with you and your team at any time that is convenient for you. As you may know, we are locked down here in the Research Triangle until May 15. If it makes sense, we could arrange a WebEx as an initial step.

Many thanks for the opportunity to share this with you!

All the very best,

Dani

Quick update

Update in confidence

European network from this morning:

16 Paris, 2 Geneva, few Madrid last 10 days - nothing like this usually seen even with seasonal KD or TSS
Barcelona have slightly different experience of 6 'Kawasaki' in last 2 weeks - couple now who have large coronary aneurysms, as have one child South London and one in Bristol.
Most UK PICU have 1-2 of these type of cases
Phenotype seems Diarrhoea and abdominal pain, refractory shock then various degrees of heart involvement and inflammation ++ - several have had their normal appendix whipped out
Most negative respiratory and stool PCR for anything, some positive resp PCR COVID - GOSH early case has seroconverted, but had immunoglobulin
We are establishing database UK and Europe and trying to define what the clinician features are and agree investigations.
Notably, none in US reported (just D/W Boston childrens who have been running shared international COVID experience web calls) and none in Rome, unsure about rest of Italy yet
Does seem BAME preponderance -?? immune related or social phenomenon, in terms of deprivation prevalence and ability to isolate

Jeremy:

Thanks for the heads up. Is there any more detailed description of the precise clinical manifestations? They describe a "multisystem inflammatory state". It is vasculitis or anything more specific? Could be an infectious agent that has nothing to do with SARS-CoV-2 infection even though some children are circumstantially infected with SARS-CoV-2or it could be a post-SARS-CoV-2 inflammatory syndrome, perhaps a Kawasaki syndrome-like disease. Please keep me informed if you hear any further information.

Subject: RE: NAS Annual Meeting Session on COVID-19 -- Information regarding your Saturday April 25 participation

Dear all,

Thank you for agreeing to participate in a special late breaking session on the COVID-19 pandemic at the NAS annual meeting. Knowing how busy you are, I am sending this email in lieu of a call to prepare for the session.

As you know, this is a 90 minute session which aims to provide our audience with deeper insights into the latest developments in the COVID-19 response. I plan to hold an engaging discussion that covers the whole experience on dealing with this pandemic – from US to international, to preparedness and response, the biology of the virus, the state of diagnostic, treatment and vaccine development, and the importance of communication.

I will begin the session by providing brief (~3 min) opening remarks describing the circumstances of the pandemic. Then, I will introduce the panelists and you will each have 7 minutes to provide remarks. You may use a limited number of slides for illustration. I hope that each panelist will provide their own perspective and speak to the issues proposed below.

- Jeremy Farrar will discuss the global response to the pandemic, drawing from his experience as a global leader, the chair of the Scientific Advisory Group for the WHO's R&D Blueprint and as a member of the Global Preparedness Monitoring Board.
- Tony Fauci will discuss the US pandemic and provide his perspective as a member of the White House Coronavirus Task Force addressing the 2019–20 coronavirus pandemic.
- George Gao will discuss China's response to the pandemic and lessons learned for the rest of the globe.
- Susan Weiss will discuss the viral characteristics of SARS COV2 , insights into its pathobiology, immunity and development of a pan-CoV antiviral.
- Richard Hatchett will discuss the development of new vaccines and treatments against COVID-19.
- Sanjay Gupta will comment on the health system response to the pandemic and challenges related to communication and public engagement in responding to COVID-19.

Following remarks from each panelist, we will have a moderated discussion amongst ourselves – I will ask you a set of questions (15 mins) and then we will take questions from the web (25 mins). To prepare me to be your moderator, please send me any questions you would like me to ask you. For those of you who would like to have a prep call, please let me know and I will set it up.

Best,
Victor

Subject: NAS Annual Meeting Session on COVID-19 -- Information regarding your Saturday April 25 participation

Dear Speakers:

I am the logistical contact for the COVID-19 session that will be held as part of the Annual Meeting (online) program on Saturday, April 25 at 2:00 pm EDT. Thank you for agreeing to participate in this session. To help you with your planning, I have provided additional details below.

Please note that the session will be live webcast and the general public will also be able to watch the session. Video from the session will also be uploaded on the NAS YouTube channel (https://www.youtube.com/user/theNASciences) after the meeting. We will need to obtain signed speaker release forms for your participation in this session. I have attached the speaker release form for your review and submission. **Please return the signed speaker release form by Monday, April 13**.

Session speakers are asked to connect 30 minutes prior to the session start time (**by Saturday, April 25 at 1:30 pm EDT)** to allow the technical staff to check connections and prepare for the session. Details on how to connect will be sent before the meeting.

We will list you in our promotional materials as noted below. If this is incorrect, please let me know.

Anthony S. Fauci, Director, National Institute of Allergy and Infectious Diseases
Jeremy Farrar, Director, Wellcome Trust
George F. Gao, Director-General, Chinese Center for Disease Control & Prevention
Sanjay Gupta, Chief Medical Correspondent, CNN
Richard J. Hatchett, CEO, Coalition for Epidemic Preparedness Innovations
Susan R. Weiss, Professor of Microbiology, Perelman School of Medicine, University of Pennsylvania

Since many of us have moved to remote work environments, you may already be proficient with Zoom and other online meeting/collaboration applications. I am attaching a 'speaker guidelines' file in case you have any questions on how best to prepare for and stage your remote talk. We have technical staff available to help you become familiar with Zoom and its settings – such as "sharing your screen" (if you have slide presentations that need to be shown during your talk). We can arrange for a training session this week or next week. If you would like to schedule a session, please let me know as soon as possible.

Dr. Dzau's office will be in touch regarding the agenda for this session. If you have any other questions, please let me know.

Regards, Jenny

Please watch the Twitch Stream if you can! Otherwise I will follow up tomorrow with a video!

Media coverage of the Fauci's Revenge in the News:

- NBC New York
  Spectrum NY1 News
  Timeout New York
  News 12 New York
  Bushwick Daily
  Fox 5 Good Day New York

To date we've raised over $6,150 for New York City's Public Health System (NYC Health + Hospitals). We've created limited edition t-shirts (including a Fauci's Revenge one). We've donated 6,150 Protective Suits and 4,500 Gloves to the NYC Mayor's Office and face shields to Maimonides Medical Center. Men for others!

Looking forward to being back in the halls soon at a Jug Night or Career Day. Enjoy the game!

Best,
Alex Patterson (b) (6)

To date we've raised over $6,150 for New York City's Public Health System (NYC Health + Hospitals). We've created limited edition t-shirts (including a Fauci's Revenge one). We've donated 6,150 Protective Suits and 4,500 Gloves to the NYC Mayor's Office and face shields to Maimonides Medical Center. Men for others!

Looking forward to being back in the halls soon at a Jug Night or Career Day. Enjoy the game!

Best,
Alex Patterson (b) (6)

Subject: May the Official Nobel documentary program at Swedish Television get an interview with you Dr Fauci about Covid-19 before May 7th please?

Dear Dr. Fauci,

I had the honor to interview you in april 2016 about the zika epidemic at your office for a program for national Swedish radio as their global health correspondent. I hope I may have the honor again now Sir?

I am now working as science correspondent for the national Swedish Television (non commercial public service, half the population as daily viewers) in our official Nobel prize laureaute documentary program "Vetenskapens Värld" (the World of Science) and wonder if you have any chance to give us a 10 minute interview by web video before May 7th please?

I would like to ask you two questions: What is most crucial now to suceed with an covid-19 pandemic exit in the US? How do you find the Swedish strategy against Covid-19 so far (Dr. Mike Ryan praised it yeasterday at the WHO press conference as a model for an exit strategy, what is your view)?

In this one hour program aired on May 11th we will have other prominent scientists as well talking about exit strategies, among others Nobel prize winner prof. Paul Krugman, prof. Bengt Holmström MIT, prof. Angus Deaton Princeton, as well as Prof Gabriel Leung Dean University Hongkong etc.

Here you can see the reports I did from my earlier interview with you about the zika epidemic in 2016 (in Swedish). News report: https://sverigesradio.se/artikel/6420891 20 min documentary: https://sverigesradio.se/avsnitt/712016

One option is that I send you a link for a web video Conference call. Another option is that I call you on the phone and your media department may have the oportunity to record a video of your anseers with HD quality that is better to air.

Please let me know if you are available and when.

Best regards,

Johan Bergendorff

Fauci says leak concerns fueled his White House revelation of Gilead drug results

Julie Steenhuysen
5 Min Read

CHICAGO (Reuters) - Concerns over leaks compelled the top U.S. infectious disease official to reveal data on Gilead Sciences Inc's experimental drug remdesivir, the first in a scientifically rigorous clinical trial to show benefit in treating COVID-19.

National Institute of Allergy and Infectious Diseases Director Dr. Anthony Fauci attends a coronavirus response meeting between U.S. President Donald Trump and Louisiana Governor John Bel Edwards in the Oval Office at the White House in Washington, U.S., April 29, 2020. REUTERS/Carlos Barria

The dramatic announcement by Dr Anthony Fauci in the Oval Office on Wednesday prompted concerns among scientists that the Trump administration was raising hopes about a coronavirus treatment before sharing the full data with researchers.

As a cautionary example of inflating the potential value of a therapy, some pointed to President Donald Trump's repeated endorsements of malaria drug hydroxychloroquine as a treatment, with no evidence that it works.

Newer data suggests the malaria treatments may carry significant risks for some sufferers of the respiratory disease caused by the virus.

Fauci, director of the National Institute of Allergy and Infectious Diseases (NIAID), which is running the trial, said he took the first opportunity to get the word out that patients taking a dummy treatment or placebo should be switched to remdesivir in hopes of benefiting from it.

He expressed concern that leaks of partial information would lead to confusion. Since the White House was not planning a daily virus briefing, Fauci said he was invited to release the news at a news conference with Louisiana Gov. John Bel Edwards(D). "It was purely driven by ethical concerns," Fauci told Reuters in a telephone interview.

"I would love to wait to present it at a scientific meeting, but it's just not in the cards when you have a situation where the ethical concern about getting the drug to people on placebo dominates the conversation."

An independent data safety and monitoring board, which had looked at the preliminary results of the NIAID trial, determined it had met its primary goal of reducing hospital stays.

On Tuesday evening, that information was conveyed in a conference call to scientists studying the drug globally.

"There are literally dozens and dozens of investigators around the world," Fauci said. "People were starting to leak it." But he did not give details of where the unreported data was being shared.

Several scientists interviewed by Reuters felt the White House setting seemed inappropriate for the release of highly anticipated government-funded trial data on the Gilead therapy.

They had expected it to be presented simultaneously in a detailed news release, a briefing at a medical meeting or in a scientific journal, allowing researchers to review the data.

Information from various trials of remdesivir has been leaked to media in recent weeks. In a statement on Wednesday, Gilead said the NIAID's much anticipated trial had met its primary goal, but gave no details.

Data in a separate NIAID statement after Fauci spoke detailed preliminary results showing that patients who got the drug had a 31 percent faster time to recovery than those who got a placebo, cutting hospital stays by four days.

The trial also came close to showing the drug helped people survive the disease, but the data fell just short of statistical significance.

"I want to see the full data. I want to understand the statistics. I want to understand the benefit and risk. I want to understand the structure of the study, and all of it," said Dr. Steven Nissen, the chief academic officer at the Cleveland Clinic.

"Am I encouraged from what I've heard? Yes, I'm encouraged. But I want to get a full understanding of what happened here, and not get it via a photo opportunity from the Oval Office."

Data Gilead released on its own trial of remdesivir drew less attention, as it did not compare outcomes between those receiving therapy and those who did not.

Results from a third study in China suggesting remdesivir failed to help COVID-19 patients were released in the British medical journal the Lancet after review by a peer group of scientists.

"That's the only thing I'll hang my hat on, and that was negative," said Dr. Eric Topol, director and founder of the Scripps Research Translational Institute in La Jolla, California.

He was unimpressed by remdesivir's modest benefit.

"It was expected to be a whopping effect," Topol added. "It clearly does not have that."

At the Oval Office news conference, Fauci compared the study findings to AZT, the first drug to show any benefit against HIV, decades ago.

"We know that was an imperfect drug. It was the first step," Fauci said in the interview.

"Similar to AZT, it's (remdesivir) the first baby step towards what hopefully will be a number of better drugs that will come in and be able to treat people with COVID-19."

(This story has been refiled to correct spelling of "clinical" in paragraph one)

Dear Dr. Pape:

I lead the World Health Organization (WHO) delegation to the United Nations and know of you through Tony Fauci and Henry Masur, [redacted] (b) (6). For nearly 5 years immediately preceding my appointment at WHO,, I was an technical advisor at Hôpital Sacré-Cœur in Milot and remain in close contact with institution. Because of this, PAHO leadership asked me to join their COVID-19 planning discussions related to Haiti. I understand from Henry that you have been appointed by MSPP to coordinate COVID-19 preparedness and response activities. If you have some time available on Friday, it would be good to talk via Zoom or Webex. I can arrange this and would plan to have the PAHO deputy director as well as other PAHO officials on the line. Would you be available Friday afternoon for such a discussion? If not Friday, anytime over the weekend would also likely work on our end.

Thanks so much for considering this.

With best regards,

Stewart Simonson

To: Fauci, Anthony (NIH/NIAID) [E] (b) (6)>
Subject: NAD repletion for Covid-19
Importance: High

Dear Dr. Fauci,

Recent research has shown that SARS-CoV-2 plays havoc with NAD function within cells.

Coronavirus Infection and PARP Expression Dysregulate the NAD Metabolome: A Potentially Actionable Component of Innate Immunity:
https://www.biorxiv.org/content/10.1101/2020.04.17.047480v3

The Molecular Story of COVID-19; NAD+ Depletion Addresses All Questions in this Infection:
https://www.preprints.org/manuscript/202003.0346/v1

Other research has shown that NAD+ levels decline from aging and obesity, both significant factors in Covid-19 severity. But it has also been demonstrated that NAD levels can be replenished through oral administration of nicotinamide riboside (NR) and nicotinamide mononucleotide (NMN). NR in particular has had several human studies demonstrating its safety and efficacy, and roughly 50 human studies listed on clinicaltrials.gov for all manner of disorders.

There is at least one anecdotal report of dramatic improvement in a Covid-19 patient after administration of NMN.

NMN shows great promise in case studies of humans with COVID-19:
https://alivebynature.com/nmn-shows-promise-for-treatment-of-covid-19-in-case-studies/?utm_campaign=NMN%20for%20covid%20%28TqFTyz%29&utm_medium=email&utm_source=Main%20List&_ke=eyJrbF9lbWFpbCI6ICJtZWxAZGlzdHJpYnV0ZWwuY2EiLCAia2xfY29tcGFueV9pZCI6ICJSbWROWFoifQ%3D%3D

That article begins with the disclaimer, "*There are no human trials that prove effectiveness of any NAD+ boosting supplements for preventing or curing COVID-19.*"

That is a problem. When I see the resources that have been wasted pursuing hydroxychloroquine, I am saddened to learn that there are no clinical trials of nicotinamide riboside as part of a treatment regimen for Covid-19. Can you do anything about getting such a study done?

Regards,
Mel Cohen

Dr. Fauci,

First, thank you for everything you are doing. I have always been grateful for your public service, but feel particularly indebted to you these days.

To add to the debt…Josh and I wanted to see if you would be willing to join a call with Business Roundtable CEOs. We have been doing COVID-19 calls with them every Friday at 1:30pm. Typically, about 100-125 CEOS of large, U.S.-based firms will join. They are all managing and planning for difficult issues around employee and customer safety. They would love to hear from you directly and to ask a few questions. It might also be a good place to deliver any messages you want them to hear.

We completely understand if it isn't doable, of course. If you are able, we would love to host you sometime between 1:30pm-2:30pm this Friday (or any Friday on which your schedule would allow it).

Best,

Kristen

Subject: ASF: two things

Talked to FDA. They have written (and cleared with Gilead) a new sentence in place of what we had in there about an EUA. Our release has been updated (attached) with the sentence highlighted below.

ALSO: Bill Hall called me to ask if you had alerted the Secretary to this (so the press release clearance process isn't the way he first learns of it). I told him I wasn't sure. If you haven't done so, perhaps you wish to now?

As part of the U.S. Food and Drug Administration's commitment to expediting the development and availability of potential COVID-19 treatments, the agency has been engaged in sustained and ongoing discussions with Gilead Sciences regarding making remdesivir available to patients as quickly as possible, as appropriate.

Subject: ASF: please read, Gilead statement

FYI – this will go out before markets open this morning:

GILEAD SCIENCES STATEMENT ON POSITIVE DATA EMERGING FROM NATIONAL INSTITUTE OF ALLERGY AND INFECTIOUS DISEASES' STUDY OF REMDESIVIR

Foster City, Calif., April 29, 2020 – Gilead Sciences. Inc. (Nasdaq: GILD) is aware of the positive data emerging from the National Institute of Allergy and Infectious Diseases' (NIAID) study of remdesivir. We understand that the trial has met its primary endpoint and that NIAID will provide detailed information at an upcoming briefing.

In addition to the NIAID trial, Gilead expects to share additional remdesivir data from the company's open-label Phase 3 SIMPLE trial in patients with severe COVID-19 disease shortly. This study will provide information on whether a shorter, 5-day duration of therapy may have similar efficacy and safety as the 10-day treatment course evaluated in the NIAID trial and other ongoing trials. Gilead expects data at the end of May from the second SIMPLE study evaluating the 5- and 10-day dosing durations of remdesivir in patients with moderate COVID-19 disease.

Gilead will continue to discuss with regulatory authorities the growing data set regarding remdesivir as a potential treatment for COVID-19.

Subject: Coronavirus info about a program that can help.

Dear Dr Fauci

It's a pleasure to send you this email my name is Alex Holbus I am from the UK I currently live in Serbia or ex Yugoslavia.
I am a Economist and Humanitarian. I can talk about my Biography but at this time the subject I want to share with you I much more important.

In January 2016 I sent a letter to Mr Trump [redacted] (b) (6) telling him that I was happy that he will bring change to America and the world and that if he needed my expertise that I would help your country and the world. As I have not got any responses from him nor his people I can see that he might not be interested. But as I have been following you over the media and be reading about your carrier as a Doctor I believe you know what your doing and would like to take this opportunity to help you and your country at this time when it's the worst then ever before in the modern world. I have a program that can help with the coronavirus in the way of identifying people and following there movement that can help you collect data faster and more sufficient. The program is based on an app so every one can use it. Countries in Europe are starting to use it by the end of May the Europe Union has made it mandatory that all member states need to use it and the future members like Serbia. So you will see attached a presentation about the program and if you or your country is interested please let me know and I will put you in contact with the company making this program. I did not send this email to you so we make money on people it's to help I just wanted to help. I will be contacting my contacts in the USA from Thursday morning but first I wanted to talk with you and give you the opportunity to see if Mr Trump would interested in this program for your country. If nothing comes back from you anyway my friend and contact in the USA will talk with the white house but I wanted to do it the proper way by talking to you as you are the main medical person in the USA for the coronavirus.

Anyway wish you and your country all the best and that the world will become a better place after this epidemic is over.

It's one life one world one human we are all one on this planet no one is bigger or better the all of us as humanity as one.

Kind regards

Alex Holbus

Director at Real Five Company.

Older adults with COVID-19, the illness caused by the coronavirus, have several "atypical" symptoms, complicating efforts to ensure they get timely and appropriate treatment, according to physicians. COVID-19 is typically signaled by three symptoms: a fever, an insistent cough and shortness of breath. But older adults — the age group most at risk of severe complications or death from this condition — may have none of these characteristics.
Instead, seniors may seem "off" — not acting like themselves — early on after being infected by the coronavirus. They may sleep more than usual or stop eating. They may seem unusually apathetic or confused, losing orientation to their surroundings. They may become dizzy and fall. Sometimes, seniors stop speaking or simply collapse.

Subject: Invitation from the Investment Community

Dear Dr. Fauci,

I am the co-founder of SAGE Worldwide, a global speaker and consulting company. I am reaching out on behalf of one of my partners, Robert Karofsky, Co-President of UBS Investment Bank, with an invitation to join the UBS Global response to Covid-19 in a live streaming moderated discussion on May 18. Alternatively your conversation could be pre-recorded to accommodate your busy schedule. At this critically important time in our nation's history, the investment community wants to help our nation fight Covid-19 and use our country's economic engine to find a cure and solutions for Covid-19. They also are thinking through how to help our nation's businesses going forward. Your expertise is important to this conversation.

By way of background, I served in the White House for eight years in the Bush Administration as the Social Secretary to Vice President Cheney. In that capacity, I had the privilege of curating a range of discussions with global thinkers and thought leaders on the world's most pressing topics. At SAGE, we bring that level of excellence to our business partners as we help curate discussions that have an impact on public awareness and investor sentiment, which is particularly important as the U.S. responds to Covid-19.

Additionally, [redacted] (b) (6)

Participants at the UBS Global Healthcare Conference provide critical funding to pharmaceuticals and healthcare research and are the businesses on the frontline of the Covid-19 healthcare response.

Attached please find an invitation from UBS with further details of the event. I welcome the opportunity to hear from you at your earliest convenience, and thank you for your important work and dedication to our country's well being over the course of your distinguished career and service at NIAID.

Warmest regards,
Elizabeth Haenle
Co-Founder, SAGE Worldwide

Subject: HIGH SCHOOL MUN CONFERENCE

Dear Dr. Anthony Fauci,

My name is Dane Cohn, and I am an [redacted] (b) (6). I have often listened to your inspiring words on the news and followed your assiduous work to help us through this pandemic. Our school participates in Model UN, an event in which high school students represent various countries in debates on international issues from the past and present. Colorado's final Model UN conference was canceled, so our school ([redacted] (b) (6)) decided to host an online conference for the whole state of Colorado and beyond. Our team would like to formally invite you to give a short address (be it pre-recorded or live online) to the students during our opening ceremony.

We hope that our conference will inspire the youth of our nation and the world to stand up and fight for our future rather than resign their aspirations to lockdown. We host this conference because we see the importance of keeping our academic passions going while staying safe within the confines of our homes. We host this conference because we want to contribute to the fight against COVID-19 — money raised from our conference will go towards buying masks, food, and other resources for those who need it most.

This is why we ask you, a hero during this troubling time, to speak to the students of our conference, who not only include the youth of Colorado, but also the youth of our country and world. Any type of address would be greatly and wholeheartedly appreciated. If your address is pre-recorded, we would appreciate it if we could receive it by May 1st, as our conference is the morning of May 2nd. We believe you can bring true inspiration into our hearts and minds. We know you are very busy, but if it were at all possible to share with us even a short 2-3 minute pre-recorded greeting and message to the students participating in this Model UN conference, it would be truly inspirational. Thank you so much for your time, we hope to hear from you soon.

Most Respectfully,
Dane Cohn and the entire [redacted] (b) (6) Model UN Team

> I'm reaching out because Chair DeLauro would like to invite Dr. Fauci to a hearing next Wednesday, May 6, with the House LHHS appropriations subcommittee. The focus of the hearing, not surprisingly, would be COVID-19. Members of the subcommittee would very much like to hear from Dr. Fauci on anything related to COVID-19, but I think the main topics would be:
>
> - Mitigation and Testing; and
> - Progress on vaccines, therapeutics, and diagnostics, as well as necessary preparations to manufacture and disseminate a vaccine once it is ready.

Chair DeLauro is flexible about a starting time for the hearing on Wednesday, so she would be happy to accommodate a time that works for Dr. Fauci's schedule.

Please let me know as soon as possible, so we can plan accordingly.

Thanks so much,

Stephen

Hi Tony:

In advance of getting together with you and your team, I am forwarding a short presentation for you guys to look at. The key elements are follows:

[redacted] (b) (4), (b) (5)

[redacted] (b) (4), (b) (5)

We are prepared to discuss this with you and your team at any time that is convenient for you. As you may know, we are locked down here in the Research Triangle until May 15. If it makes sense, we could arrange a WebEx as an initial step.

Many thanks for the opportunity to share this with you!

All the very best,

Dani

Dr. Fauci:

This is Anthony Foxx, immediate former US Transportation Secretary, and I greatly enjoyed our interactions (brief thoughts they were) during my time in the last Administration.

I write to request your help in advising the transportation community about how to manage through the present crisis, particularly as some areas are easing restrictions. I would welcome an opportunity to join you in a Q/A, which could be valuable for rideshare companies (b) (6)), transit agencies, airlines etc. I would think that a 10-15 minute chat would do wonders. That said, I know you are terribly busy and have so many things to do but would appreciate any opportunity to help you get important information out.

This could be pulled together rapidly and done within the next week or so.

Thanks for your attention to this matter. All my best,

Anthony.

Subject: Re: Covid thrombi

Dear Tony,

I talked with Dr. Viecca this morning who shared additional information about his protocol. They started from the pathological observation that all patients dying of Covid-19 pneumonia had diffuse pulmonary microthrombosis. Since they detected almost exclusively white thrombi, they reasoned that they had to block platelet activation/aggregation, while heparin would be ineffective at that stage. Thus, they treated a first group of five critical patients with potent anti-aggregant therapy (Tirofiban/Aggrastat) and apparently in all of them the pO2 started to rise within less than 2 hours, they got off the ventilators and went on to full recovery. Viecca is an interventional cardiologist (b) (4). I sent copy of his protocol and contact information to Joe.

Let me know if I can be of any further help. All the best,

Paolo

Subject: Flagging NIH Media Product for Release Tomorrow

Tony,

Please see below and attached a time-sensitive COVID-19 item for your awareness and sharing with the remainder of the Task Force, as appropriate. The plan is to release this tomorrow.

Item 1: Title: Rapid Acceleration of Diagnostics (RADx) Initiative

Activity Type: Funding of new research program
Summary: With a [redacted] (b) (5) investment from federal stimulus funding, RADx initiative will infuse funding into early innovation technologies to speed development of rapid and widely accessible COVID-19 testing. At the same time, NIH will seek opportunities to move more advanced diagnostic technologies swiftly through the development pipeline toward commercialization and broad availability. As part of the initiative, NIH is urging scientists and inventors with a rapid testing technology to compete in a national COVID-19 testing challenge for a share of up to $500 million over all phases for further development. The goal is to add tens of millions per month of accurate and easy-to-use tests to all Americans by Fall 2020.
Impact on COVID-19 Pandemic Response: RADx will accelerate the development, validation, and commercialization of innovative new testing methods that can be deployed in point-of-care and home settings. These technologies are urgently needed to guide and inform safe return to work, school, and life activities.

Office: National Institute of Biomedical Imaging and Bioengineering
Action Date: Solicitation announcement April 28, 2020
Type of Action: Research Program Award
Potential for Press Coverage: Mainstream Press
Press Release in Development?: Yes

Do let me know if you have any questions.

(Also, Brad Pitt?! Wow, that was a really nice shout out/thank you.)

Best,

Subject: FOR ASF REVIEW: Draft PR re: SARS-CoV-2 incidence in children

Hi Dr. Fauci,

Please find attached for your review a draft release about the launch of the Human Epidemiology and Response to SARS-CoV-2 (HEROS) study, which is intended to help determine the percentage of children infected with SARS-CoV-2 and the percentage of infected children who develop COVID. In addition, the study will examine whether rates of SARS-CoV-2 infection differ between children who have asthma or other allergic conditions and children who do not. Your draft quote is as follows:

"One interesting feature of this novel coronavirus pandemic is that very few children have become sick with COVID-19 compared to adults," said NIAID Director Anthony S. Fauci, M.D. "Is this because children are resistant to infection with SARS-CoV-2, or because they are infected but do not develop symptoms? The HEROS study will help us begin to answer these and other key questions."

Thanks much,
Kathy

Dear Dr. Fauci,

I hope this email finds you well. My name is Taylor Taglianetti and I am the founder of the National Organization of Italian Americans in Film & Television (NOIAFT).

Our organization is so very proud of the work you are doing for our country and sends tremendous thanks for the hope and reassurance you have instilled during these trying times.

It would be an honor to conduct a short interview with you. Our organization includes many young Italian Americans breaking into the entertainment industry and with the coronavirus dramatically impacting our field, I'd love to ask you a few questions about what the future of the entertainment business looks like. We'd be happy to send the questions in advance for your approval. If you don't have time for a phone call, the questions can be answered via email at your leisure.

Thank you for your time and consideration.

Sincerely,

Taylor Taglianetti

Topic: Statement by ASF during Saturday NAS web briefing
Deadline: urgent

Hi Patty,

Elizabeth would like to clarify something that Dr. Fauci apparently said about remdesivir during his NAS web briefing on Saturday. The transcribed segment of the talk that she is focused on says:

"Remdesivir is the one that's gotten the most publicity. It is interesting that if you look at it in a prophylactic therapeutic model in MERS coronavirus infection, it looked pretty good. There was clinical benefits just reported a couple of weeks ago of SARS coronavirus 2 in rhesus macaques."

She wants to clarify what Dr. Fauci meant by looking at remdesivir "in a prophylactic therapeutic model in MERS"—whether this means in an animal model or something else. It sounds like that phrase is referring to the RML study in which remdesivir successfully prevented disease in MERS-infected rhesus macaques, as reported in the Feb. 13 NIAID media availability pasted below. Is that correct?

Best,
Laura

Remdesivir Prevents MERS Coronavirus Disease in Monkeys

Results Support Testing Antiviral Against 2019 Novel Coronavirus

February 13, 2020

The experimental antiviral remdesivir successfully prevented disease in rhesus macaques infected with Middle East respiratory syndrome coronavirus (MERS-CoV), according to a new study from National Institutes of Health scientists. Remdesivir prevented disease when administered before infection and improved the condition of macaques when given after the animals already were infected.

The new report from NIH's National Institute of Allergy and Infectious Diseases (NIAID) appears in the *Proceedings of the National Academy of Sciences*.

MERS-CoV is closely related to the 2019 novel coronavirus (SARS-CoV-2, previously known as 2019-nCoV) that has grown to be a global public health emergency since cases were first detected in Wuhan, China, in December.

Remdesivir has previously protected animals against a variety of viruses in lab experiments. The drug has been shown experimentally to effectively treat monkeys infected with Ebola and Nipah viruses. Remdesivir also has been investigated as a treatment for Ebola virus disease in people.

The current study was conducted at NIAID's Rocky Mountain Laboratories in Hamilton, Montana. The work involved three groups of animals: those treated with remdesivir 24 hours before infection with MERS-CoV; those treated 12 hours after infection (close to the peak time for MERS-CoV replication in these animals); and untreated control animals.

The scientists observed the animals for six days. All control animals showed signs of respiratory disease. Animals treated before infection fared well: no signs of respiratory disease, significantly lower levels of virus replication in the lungs compared to control animals, and no lung damage. Animals treated after infection fared significantly better than the control animals: disease was less severe than in control animals, their lungs had lower levels of virus than the control animals, and the damage to the lungs was less severe.

The scientists indicate that the promising study results support additional clinical trials of remdesivir for MERS-CoV and COVID-19, the disease that SARS-CoV-2 causes. Several clinical trials of remdesivir for COVID-19 are under way in China, and other patients with COVID-19 have received the drug under a compassionate use protocol.

The Biomedical Advanced Research and Development Authority (BARDA), part of the U.S. Department of Health and Human Services, also provided support for this study. Gilead Sciences, Inc., developed remdesivir, also known as GS-5734, and collaborated in the research.

MERS-CoV emerged in Saudi Arabia in 2012. Through December 2019, the World Health Organization had confirmed 2,499 MERS-CoV cases and 861 deaths (or about 1 in 3). Because about one-third of MERS-CoV cases spread from infected people being treated in healthcare settings, the scientists suggest that remdesivir could effectively prevent disease in other patients, contacts of patients, and healthcare workers. They also note the drug might help patients who are diagnosed with MERS or COVID-19 if given soon after symptoms start.

ARTICLE:

E de Wit *et al*. Prophylactic and therapeutic remdesivir (GS-5734) treatment in the rhesus macaque model of MERS-CoV infection. *PNAS* DOI: 10.1073/pnas.1922083117.

WHO:

NIAID Director Anthony S. Fauci, M.D., and Emmie de Wit, Ph.D., a principal investigator in NIAID's Laboratory of Virology, are available to comment on this study.

Subject: Coronavirus Antigen Microarray

Hi Cassandra,

Happy Day! I am excited to let you know that Sino Biological just released Coronavirus antigen Microarray (CoVAM) which belongs to our Sinommune™ Multiplex Antigen Microarray product line. You may get more details from the following link:

https://www.sinobiological.com/research/virus/coronavirus-array

Currently the standard pre-printed CoVAM array is sold in the unit of slide, 16 arrays/slide. In each array there are 65 antigens related to the viruses that can cause upper respiratory tract infections including the most recent SARS-CoV-2. The list price is $3,200/slide. Please contact me for how to place the order if you are interested or need more information.

So far, this array has mainly been used for two purposes: 1) Sero-surveillance studies of COVID-19 infection, and 2) Evaluating antibody reactivity in animals (monkeys and mice) after vaccination. Please be advised that our array is for research use only (RUO), not for the diagnostic purpose which needs the FDA approval.

After you run the samples on the slide, you may read the slide on the following compatible machines:

https://www.innopsys.com/en/lifesciences-products/microarrays/innoscan

https://www.moleculardevices.com/products/additional-products/genepix-microarray-systems-scanners#gref

Subject: Otto e Mezzo - Italian Show

Dear Mr. Fauci,

I'm Patrizia Torchia, I'm a journalist and I am a member of the team on the Italian show *Otto e Mezzo*, hosted daily by journalist Lilli Gruber on La7 channel.

I'm reaching out to invite you in our show. Mrs. Gruber would be honored to have you, Dr. Fauci explore in more depth the challenges Coronavirus has forced the world to face. Can make this happen?

Below is Lilli Gruber's bio and a brief description of the show.

WHO:

Lilli Gruber is the editor-in-chief and host of Italy's most influential political daily talk show, "Otto e mezzo", airing on prime-time on La7 TV. She's received Italy's most prestigious journalism awards for her work and was the first woman to ever conduct the prime-time News broadcast in Italy (RAI TV, 1987). As a foreign correspondent she covered most of last 30 years' major world events, from the fall of the Berlin wall to 9/11 to the Iraq war. Beside her television work, Ms. Gruber wrote eleven bestseller books including "Eredità", which was top seller for 20 weeks and ran 14 reprints. In 2004, Ms. Gruber won a head-to-head campaign against Silvio Berlusconi by a large margin of votes and was elected to the European Parliament. There, among other appointments, she was the Head of the EU Delegation to the Gulf States and Yemen and a member of the EU Delegation to Iran.

"Otto e mezzo"

Italy's most influential political daily talk show shown on prime-time on La7 TV. Through interviews with elected political figures and candidates for office, commentators, and journalists, the show focuses on international political news and economy with a special focus on Italy and Europe. Beginning in 2008 "*Otto e Mezzo*" became Lilli Gruber's way to keep her commitment to holding those in power accountable by asking questions and touching on topics citizens are curious about. ***Otto e Mezzo*** airs Monday to Saturday from 8:35pm to 9:10pm. Within this time-frame Paolo Pagliaro's news column "Il Punto" stands out for accuracy and thoughtfulness by pulling the thread on the highest rated issues in an agenda. During the current season Otto e Mezzo has become Italy's most watched political talk show reaching an average of 7.3% of share with 2.5 million viewers per day.

Hi Ninio,

We are wondering if Dr. Fauci would like to have a taped Skype conversation with PayPal CEO and President Dan Schulman to talk about safety measures, health and science tied to COVID-19. We would air the conversation during a global employee all hands to our 23,000 employees and then we could syndicate parts of it externally on our social channels.

Thanks for any help in reaching Fauci's team.

Thanks,
Amanda

Dear Dr. Fauci,
dear Madams/Sirs,
I want to bring to your attension some potentially important experimental data and a new proposal for treatment of COVID-19 patients with acute respiratory distress syndrome and organ failure. Sorry for the broad distribution but I wanted to make sure that my message reaches you.

[redacted] (b) (4), (b) (5)

[redacted] (b) (4), (b) (5)

Please forward this mail to the colleages you consider relevant for evaluation, discussion and consideration for your clinical strategy for COVID-19.

Please let me know if additional informations are necessary.

To my person: I have MD PhD degree and have many years experience in pharmaceutical development (Boehringer Ingelheim), Biotech (Igeneon, Aphton, Virologik GmbH) (for reference see also PubMed Kircheis r) currently leading R&D activities at Syntacoll (part of Innocoll). I am providing this information personally in order to help to find a treatment for COVID-19 patients.

Looking forward to getting feedback from you,

With kind regards,

Ralf Kircheis (MD PhD)

Subject: RE: NAS Annual Meeting Session on COVID-19 -- Information regarding your Saturday April 25 participation

Thanks, Jeremy. I saw the report in the Post from Saturday. These children had mostly respiratory disease and diarrhea. I will check with the docs at DC Children's Hospital about the presence of "multisystem inflammatory state". This could just be the advanced stage of their disease compatible with advanced SARS-COV-2
Best,
Tony

Jeremy:

Thanks for the heads up. Is there any more detailed description of the precise clinical manifestations? They describe a "multisystem inflammatory state". It is vasculitis or anything more specific? Could be an infectious agent that has nothing to do with SARS-CoV-2 infection even though some children are circumstantially infected with SARS-CoV-2or it could be a post-SARS-CoV-2 inflammatory syndrome, perhaps a Kawasaki syndrome-like disease. Please keep me informed if you hear any further information.

Best regards,
Tony

Subject: RE: NAS Annual Meeting Session on COVID-19 -- Information regarding your Saturday April 25 participation

Dear all,

Thank you for agreeing to participate in a special late breaking session on the COVID-19 pandemic at the NAS annual meeting. Knowing how busy you are, I am sending this email in lieu of a call to prepare for the session.

As you know, this is a 90 minute session which aims to provide our audience with deeper insights into the latest developments in the COVID-19 response. I plan to hold an engaging discussion that covers the whole experience on dealing with this pandemic – from US to international, to preparedness and response, the biology of the virus, the state of diagnostic, treatment and vaccine development, and the importance of communication.

I will begin the session by providing brief (~3 min) opening remarks describing the circumstances of the pandemic. Then, I will introduce the panelists and you will each have 7 minutes to provide remarks. You may use a limited number of slides for illustration. I hope that each panelist will provide their own perspective and speak to the issues proposed below.

- Jeremy Farrar will discuss the global response to the pandemic, drawing from his experience as a global leader, the chair of the Scientific Advisory Group for the WHO's R&D Blueprint and as a member of the Global Preparedness Monitoring Board.
- Tony Fauci will discuss the US pandemic and provide his perspective as a member of the White House Coronavirus Task Force addressing the 2019–20 coronavirus pandemic.
- George Gao will discuss China's response to the pandemic and lessons learned for the rest of the globe.
- Susan Weiss will discuss the viral characteristics of SARS COV2 , insights into its pathobiology, immunity and development of a pan-CoV antiviral.
- Richard Hatchett will discuss the development of new vaccines and treatments against COVID-19.
- Sanjay Gupta will comment on the health system response to the pandemic and challenges related to communication and public engagement in responding to COVID-19.

Following remarks from each panelist, we will have a moderated discussion amongst ourselves – I will ask you a set of questions (15 mins) and then we will take questions from the web (25 mins). To prepare me to be your moderator, please send me any questions you would like me to ask you. For those of you who would like to have a prep call, please let me know and I will set it up.

Best,
Victor

Subject: NAS Annual Meeting Session on COVID-19 -- Information regarding your Saturday April 25 participation

Dear Speakers:

I am the logistical contact for the COVID-19 session that will be held as part of the Annual Meeting (online) program on Saturday, April 25 at 2:00 pm EDT. Thank you for agreeing to participate in this session. To help you with your planning, I have provided additional details below.

Please note that the session will be live webcast and the general public will also be able to watch the session. Video from the session will also be uploaded on the NAS YouTube channel (https://www.youtube.com/user/theNASciences) after the meeting. We will need to obtain signed speaker release forms for your participation in this session. I have attached the speaker release form for your review and submission. **Please return the signed speaker release form by Monday, April 13**.

Session speakers are asked to connect 30 minutes prior to the session start time (**by Saturday, April 25 at 1:30 pm EDT)** to allow the technical staff to check connections and prepare for the session. Details on how to connect will be sent before the meeting.

We will list you in our promotional materials as noted below. If this is incorrect, please let me know.

Anthony S. Fauci, Director, National Institute of Allergy and Infectious Diseases
Jeremy Farrar, Director, Wellcome Trust
George F. Gao, Director-General, Chinese Center for Disease Control & Prevention
Sanjay Gupta, Chief Medical Correspondent, CNN
Richard J. Hatchett, CEO, Coalition for Epidemic Preparedness Innovations
Susan R. Weiss, Professor of Microbiology, Perelman School of Medicine, University of Pennsylvania

Since many of us have moved to remote work environments, you may already be proficient with Zoom and other online meeting/collaboration applications. I am attaching a 'speaker guidelines' file in case you have any questions on how best to prepare for and stage your remote talk. We have technical staff available to help you become familiar with Zoom and its settings – such as "sharing your screen" (if you have slide presentations that need to be shown during your talk). We can arrange for a training session this week or next week. If you would like to schedule a session, please let me know as soon as possible.

Dr. Dzau's office will be in touch regarding the agenda for this session. If you have any other questions, please let me know.

Regards, Jenny

Subject: SNL review

OKAY, so here is something even better than having Brad Pitt portray me on SNL. It is a recent review of Pitt's performance in which the TV reviewer said :

"Kicking things off, the Oscar winner dropped jaws during the cold open with his monologue about President **Donald Trump**'s recent (and concerning) comments about COVID-19.

"Good evening, I'm Dr. Anthony Fauci," Pitt began his monologue and looked nearly identical to the director of the National Institute of Allergy and Infectious Diseases."

Someone said Pitt looked "nearly identical" to me. Yikes!! ☺

Subject: Appreciation

Dr. Fauci I just wanted to express my profound appreciation to you for your work during this COVID-19 pandemic. I especially appreciate how you have spent considerable time and capital reaching out to the Black and brown communities. I saw exerts of your snapchat with Will Smith and saw nearly all of your interview on the Breakfast Club. I regret I have to send an email to you re this matter. But this is the day we live in. Minority communities continue to be over-looked in crises and the impact of such crises on their respective communities. For you to be intentional about keeping the minority communities in the loop is commendable, especially since these communities will be absorbing the disproportionate share of the sicknesses and deaths coming from COVID-19.

Thanks for all of what your are doing in keeping the nation informed. Thanks for informing based on the facts, data, and truth.

Take care and "Cover your six."

Where is Dr. Fauci?
I know where Dr. Fauci is—I saw him on SNL—remarkably he looked like Brad Pitt—except [to many of us] Dr. Fauci is better looking. Smile, wink *Why? We look with our hearts*
I remember someone asked Dr. Fauci [in jest] who would he like to represent him in a movie...Dr. F. said Brad Pitt. Well—Dr. F. Your dream suggestion came true. But, in many of our hearts—NO ONE can take the place of our beloved, well respected, honored Dr. Anthony Fauci!!!!

God Bless America, God Bless Dr. Fauci !!!

Subject: Dr. Fauci video request: Public Service Recognition Week

Hi there,

Please see below. HHS is taking over the Partnership for Public Service IG account next week for Public Service Recognition Week. They asked if Dr. Fauci would be willing to do a short 30-second or less pre-recorded video thanking public servants for their work. It would be featured during the takeover, and also on NIH's other sm handles next week. It can be taken on a cell phone as sm does not require higher resolution. Let me know if you would like to accept or decline the request.

Many thanks,
Kim

Subject: Public Service Recognition Week

Hello All,

Hope everyone is holding up well!

OHR is taking over the Partnership for Public Service (PPS) Instagram account during Public Service Recognition Week (May 3-9, 2020). The OHR team has reached out about wanting to develop a senior leader "mashup" video —perhaps including the DepSec. T

They asked about the feasibility of this request. They also inquired about perhaps Dr. Fauci and the SG doing a pre-recorded video thanking public servants for their work.

I wanted to gather the troops so we can identify what all is being planned for this week of recognition and provide a POC for OHR if the request is feasible.

Happy to set up a call, if that is needed to discuss further.

Thanks,
Janell

Subject: Update on Sara Alert
Importance: High

Dear Jerome,

I hope you are well. Thank you for all you are doing to represent public health and our nation. It is very comforting knowing you are informing the nations COVID-19 response.

I wanted to give you an update on called Sara Alert, the software program I am leading at MITRE. Sara Alert is being provided free of any costs and deployed in state, tribal, and local health departments to support public health in contact tracing and active monitoring of individuals in isolation and quarantine. We are engaged with ASTHO, NACCHO, CSTE, and the application is hosted live on APHL's AIMS platform. Sara Alert officially launched on April 3 and is currently supporting multiple jurisdictions including Commonwealth of the Northern Mariana Islands, Danbury, CT, and the State of Arkansas. It is also being rolled out in Washington, Arizona, Pennsylvania, Virginia, Maine and Vermont. We are getting ready to launch in additional jurisdictions over the next couple of weeks.

We have recently responded to questions we were told came from the White House so I wanted to make sure you have background materials. I imagine you are the person that the President and Vice President would turn to for information. I am happy to arrange any briefing materials or demo that would be helpful for you to respond.

As I mentioned previously, **Sara Alert** is a standards-based, open source tool that automates the process of monitoring individuals exposed to or infected with COVID-19 (or any disease, it's configurable) – and will serve as an enduring national resource to contain disease. Sara Alert is free for use by public health organizations.

Best wishes to you. Stay healthy for all of us.

Paul

ABOUT SARA ALERT

In response to the COVID-19 pandemic, the MITRE Corporation, a not-for-profit that works in the public interest, developed **Sara Alert**, a standards-based, open source tool in partnership with national public health organizations. Sara Alert **automates the process of monitoring** individuals exposed to or infected with COVID-19 (or any disease, it's configurable) – and will serve as an **enduring national resource** to contain disease. **Sara Alert is free for use by public health organizations**.

- Sara Alert allows public health officials to import and enroll individuals (or households) at risk of developing or infected with COVID-19.
- Individuals enter their symptoms daily via web, text, email or phone, allowing public health officials to focus on high risk and non-reporting individuals.
- The web-based tool enables increased efficiency in tracking cases, leading to earlier containment of the virus and reduction of burden on public health resources.
- Sara Alert is a national system and allows transferal of monitorees across jurisdictions for tighter contact tracing.

Sara Alert launched on April 3 and **is now supporting multiple jurisdictions**.

Subject: RE: Your query to Dr. Kadlec

Dear Francis,

It was a pleasure to hear from you, and yes, it has been a long time since we met or even spoke. Moons ago I was set to write to you after reading your wonderful book, but I ended up instead speaking with others about it. I should add at this point that I did not quickly respond to your email of a few days ago because I simply missed it.

It is true that I strongly suggest that OPV be quickly (already it is not quickly) brought forward for induction of a strong innate immune response to prevent or markedly reduce SARS-CoV-2 infection and/or severity until the field obtains a proven safe and efficacious vaccine producing a long lasting, adaptive immunity. OPV is very safe (notably for OPV 1 and 3 as bOPV which we will use and completely safe in a vaccinated population), simple, cheap, rather obvious, yet unique among the massive number of vaccines many (maybe most) of which are the same or at least if not exactly the same aiming at the same mechanism (targeting the spike and searching for the putative correlate of neutralizing Abs.).

OPV should work for a few months and possibly longer. Also it should be working multiple times so I think could cover more than a few months, giving us time for a proven vaccine of adaptive immunity, which might be very long lasting as is hoped.

In the main the WHO comments are correct. Of course we sought and have letters of support from them as well as from many others. Though they are again supportive in their notes to you, there is one item that surprises me. They add that there was no clinical efficacy results as yet. They know or certainly should know that there is plenty of clinical data for this concept with BCG, OPV, and live Measles vaccine. Needless to say this is what turned me on during our regular Global Virus Network (GVN)conference calls. (Incidentally GVN is an organization I have thought of bringing to your attention. I think you would find it impressive and useful). I would be happy to share with you the clinical observations with OPV if you wish.

I would like to take a small diversion, but I suspect you are aware of these things. My colleagues and I respect the WHO because of its representation and because we have colleagues/friends there as well. However, sometimes bureaucracy of a massive degree leads to inaction or even much worse-- political expediency. I won't bother you with details of these unless you ask, but I had such experiences with HTLV-1 which we discovered in 1980 as the 1st human retrovirus and which cause not only the highest incidence of cancer (% of infections) of any virus and other fatal diseases as well but mainly in less developed countries (plus Japan) and again with HIV in 1984. Behavior was not beneficial. Perhaps it will be of relevance in the future because a few at WHO took a position to remove OPV (Sabin) in favor of IPV (Salk) in their polio eradication scheme. It was a huge failure. As my FDA collaborator, Konstantin Chumakov, says "Blessed be Bill Gates" because he saved OPV and saved the day and in so doing has produced a still better OPV.

There is indeed data also for BCG as well as live Measles though I know less of the latter. BCG is less available, requires injection, harder to make, not as safe, and we think unlikely to be as effective as OPV. Nonetheless, we favor its use too. The mechanisms will be similar.

You asked whether monkey trials are planned. For several reasons definitely not -- though we are planning some monkey experiments, but not large enough for "clinical" conclusions. The main reasons are: 1) cost; 2) that billions not thousands or millions have received OPV safely and in our collective view (and we know the studies pretty well) protection has been clinically shown; 3) In a pandemic we wished to move quickly (so far we must say that has not been achieved). A typical monkey vaccine study will take time, but 4) in this case it would be a huge amount of lost time as monkeys require great doses of polio for infection and monkeys have to be trained to drink their orange juice. It would be hard to imagine that such studies would even give us useful information.

On a final digression Francis I have had 36 years of on/off experiences with glycosylated spike proteins—their analyses immunologically and especially regarding use in vaccines and developing neutralizing Abs. I believe it will be a mistake to put most eggs in that basket. The risks: shortened antibody half life; 2) protection NOT correlating with neutralizing Abs; 3) sometimes hazards from them. Admittedly, they might work, but I trust and hope that not everything is going in this bag. If you wish to discuss this again I will be available.

Finally, I hd no idea you were into vaccines or SARS-2 nor any part of CoVID-19 disease, but I am very happy to learn this.

Thanks.

Bob Gallo

Subject: Your query to Dr. Kadlec

CAUTION: This message originated from a non UMB, UMSOM, FPI, or UMMS email system. Whether the sender is known or not known, hover over any links before clicking and use caution opening attachments.

Dear Bob,

It's been quite a while since we've chatted. Bob Kadlec asked me to respond to your query about the possible use of OPV to activate innate immunity and provide COVID-19 protection. Has this been tested in a non-human primate model? I note the recommendation below that says a clinical trial is planned – can you tell me more about that?

As you can imagine, we are all flat out on the vaccine development pathway!

Francis

The use of oral polio vaccine (OPV) to prevent SARS-CoV2 (Polio Eradication Campaign)

There is no evidence that oral poliovirus vaccine (OPV) protects people against infection with COVID-19 virus.

A clinical trial addressing this question is planned in the USA, and WHO will evaluate the evidence when it is available.

In the absence of evidence, WHO does not recommend OPV vaccination for the prevention of COVID-19. WHO continues to recommend OPV as part of essential immunization services to prevent poliomyelitis and as part of global polio eradication efforts.

There are experimental signals from various studies over the years that OPV has non-specific effects on the immune system. These effects have not been well characterized and their clinical relevance is unknown. Such non-specific effects may not be limited to OPV, as other live vaccines have also been associated with non-specific protective effects (such as BCG vaccine against tuberculosis). Nonlive vaccines in contrast do not seem to have the same effects.

The exact mechanism of non-specific protection induced by live vaccines needs to be elucidated further. Clinical studies could begin immediately because the vaccines in question are licensed and have an excellent safety record. Clinical trials involving off-label use of various drugs licensed for other indications are currently underway. The existing scientific rationale suggests that the same should be done for OPV and other live vaccines. A study is currently being discussed with various partners and vaccine manufacturers, including the US FDA, the outcomes of which will be carefully assessed to determine potential use in the context of the spread of SARS-CoV2 until the time when specific vaccines and antiviral therapies are ready.

> On Apr 30, 2020, at 10:02 AM, Gallo, Robert [redacted] (b) (6)> wrote:
>
> Dear Dr. Kaldec,
>
> I have not heard from you in over a week. You mentioned getting back to me in a day or two. Time is passing. I am asking you to look at OPV 1 plus 3 serotypes as a bivalent, completely safe vaccine with powerful stimulation of innate immunity lasting several weeks , which can be given a second or third time, and with a historical track record of

preventing other infections from entirely different RNA viruses (such as protecting against influenza). Therefore, it should be really helpful for some months, and I think get us past a second wave of SARS-CoV-2, and help people return to work safely. I don't understand delays or apparent lack of interest. Who can possibly be against this? If you hear of hypothetical problems we can show you that these are false. Just ask the questions, and we can give you the evidence.

However, no answer from you suggests no interest and must quickly make alternative pathways. I am though quite surprised and fear you are receiving "fake news" if you will pardon the expression. Some have been against this who defend their old and failed position on polio eradication with their promotion of the use of the inactivated polio virus vaccine. Please note that in the US between 1962 and 1985 we received (safely) the oral polio (OPV). Moreover, if vaccinated already there has not been a single case of a complication and BILLIONS have received it. No it will not last long as innate immunity is short lived, but we strongly believe that we can break the back of the SARS-CoVID-2 spread. Also note that this is what Bill Gates is doing now in India and much of the Eastern hemisphere.

There are countries outside the US wanting to move fast on this. We are waiting for your reply.

Subject: Re: Respone

Dr Gallo thank you for your note and I appreciate you reaching out to me. I have copied Dr Collins and Dr Tabak to consider the ACTIV forum they have created to bring industry academia and government to consider scientific base approaches That you have described. Dr Collins has organized a vaccine group and I assess could be the best and fastest place to discuss your concept. I am sure they will connect with you soonest

Best

Bob Kadlec.

>
> I have not heard from you in over a week. You mentioned getting back to me in a day or two. Time is passing. I am asking you to look at OPV 1 plus 3 serotypes as a bivalent, completely safe vaccine with powerful stimulation of innate immunity lasting several weeks , which can be given a second or third time, and with a historical track record of preventing other infections from entirely different RNA viruses (such as protecting against influenza). Therefore, it should be really helpful for some months, and I think get us past a second wave of SARS-CoV-2, and help people return to work safely. I don't understand delays or apparent lack of interest. Who can possibly be against this? If you hear of hypothetical problems we can show you that these are false. Just ask the questions, and we can give you the evidence.
>
> However, no answer from you suggests no interest and must quickly make alternative pathways. I am though quite surprised and fear you are receiving "fake news" if you will pardon the expression. Some have been against this who defend their old and failed position on polio eradication with their promotion of the use of the inactivated polio virus vaccine. Please note that in the US between 1962 and 1985 we received (safely) the oral polio (OPV). Moreover, if vaccinated already there has not been a single case of a complication and BILLIONS have received it. No it will not last long as innate immunity is short lived, but we strongly believe that we can break the back of the SARS-CoVID-2 spread. Also note that this is what Bill Gates is doing now in India and much of the Eastern hemisphere.

Dear Sir,

On behalf of ASSOCIATION OF REGISTERED PHARMACIST (An association working for Pharmacy Profession and having more than 2000 members) in collaboration with Divine International, Gwalior (A Pioneer Pharmacy Institute) I am pleased to invite you to our Webinar having THEME "CHALLENGES AND OPPORTUNITIES FOR PHARMACIST IN THE PRESENT EPIDEMIC COVID-19" that will be held from 2nd May 2020 to 3rd May 2020. This Webinar is the get together of Pharma professionals through the web. The vision of this Webinar is to Aware, Prepare and strengthen our Pharmacy professionals in our country to this epidemic COVID-19 for present and future aspect and exports more realistic ideas and present scenario of this epidemic COVID-19.

You are one of the legends of Pharma Expert of our country, it is a great privilege for us to see if you share your experience with us, we really expect and want that you join our Webinar and share with us the great experience of your life, we want to learn something from you so that we can create a great ideas, opportunity, and roll of Pharma professional for our country in the present scenario.

We would be pleased to have you present at this point at this webinar to listen to what the role and importance in the Pharmacist advancement and their impact on our society and daily life we would also love to hear your thoughts and opinion about the Pharma professional that is a dream of our pharmacy fraternity.

Therefore you are requested to send your recorded Lecture/presentation of 30-40 min

Sincerely,

--

Subject: Italy Covid-19

Dear Doctor Fauci,
My name is Paolo Mastrolilli, I am the US Bureau Chief for the Italian daily La Stampa.
I am writing because we would appreciate very much the opportunity to have a phone or written Q&As interview with you to discuss the Covid 19 pandemic. Considering the difficult situation Italy is experiencing, the help President Trump is sending to Italy, and the plan to open America again, it would be very helpful for Italy to hear from your experience and competence to address the Covid 19. We think that your advices would be very helpful to help our country and our citizens in dealing with the pandemic.
We understand that you are very busy and this request has no deadline.
La Stampa is a leading Italian daily, it is owned by the Agnelli Elkann family, owner of Fiat Chrysler as well.
I am also a contributor for the Vatican Radio and the official news portal of the Holy See, I would share the interview with them as well, if you like.
My cellphone number is (b) (6)
Please let me know if you need any further information.
Best regards
Paolo Mastrolilli

According to Science policy, all authors must have seen and approved the submission of their manuscript. If you have seen the manuscript and approved its submission, no action is necessary.

If you have not read this paper or do not approve its submission to Science, please let us know as soon as possible. Please refer to the manuscript number listed above in any correspondence (you can just reply to this message).

You can see the status of your manuscript at any time by logging into your account at the Science Journals Submission and Information Portal at https://cts.sciencemag.org.

If you do not yet have an account, please go to https://cts.sciencemag.org/scc/#/forgot-password and use the email at which you received this correspondence because that is linked to your manuscript. Then, follow the prompts to set your password and login. After login, you can access your manuscript and monitor its status.

Once you are registered, we encourage you to link your account to your ORCID ID, an identifier that facilitates the correct attribution of your publications to you. To learn more about ORCID or to obtain an ORCID ID, visit their site at: http://orcid.org.

Your manuscript is now undergoing an initial screening to determine whether it will be sent for in-depth review. If the manuscript is sent to review, its status will change to "To Review".

Sincerely,
The Editors

HIV R4P HIV RESEARCH FOR PREVENTION
CAPE TOWN, SOUTH AFRICA - 17-21 JANUARY 2021

Dear Dr. Fauci,

As the research community responds to the global challenges of the COVID-19 pandemic, HIV prevention science matters as much as ever. Our priority as organizers of the HIV Research for Prevention (HIVR4P) conference remains the safety and wellbeing of all participants.

After careful consideration, we have decided to postpone the HIVR4P conference to **17-21 January 2021**. Updated details for the session(s) are listed below:

Session title:	HIV prevention 2020 – Where are we now and where are we going?
Session type:	Opening plenary
Suggested presentation title/topic:	Much accomplished; Much to do – An overview on HIV prevention research
Session description:	Today's plenary sets the stage for the conference week ahead, outlining the big-picture challenges we face in research, product development and access to prevention. Speakers will provide diverse perspectives on the state of the field today, the opportunities and obstacles ahead and priorities for action moving forward.
Session date and time:	**Monday, 18 January 2021 - 16:00-18:00**

Meet the Experts lunches
We invite you to host an informal table discussion at a Meet the Experts lunch on **20 January 2021, 12:00-13:00**. Daily meet the experts lunches provide early-career investigators and community advocates with valuable opportunities for informal, in-depth exchange with experts representing a cross-section of research issues, implementation challenges and HIV-affected communities.

Please reply to this email by Wednesday, 6 May if you are still available to deliver this important presentation and, if so, please also include a photo and a brief biography.

We are acutely aware many researchers and research organizations with critical studies and submissions to HIVR4P are now also heavily engaged in the COVID-19 response. Our hope is that postponing the conference, rather than presenting it virtually in October, will allow for the broadest participation to foster knowledge-exchange, debate and direction-setting in the field of HIV prevention research that HIVR4P is known for.

Thank you for your consideration.

Sincerely,

Subject: HIVR4P 2020 - Invitation to present

HIV RESEARCH FOR PREVENTION
CAPE TOWN, SOUTH AFRICA - 11-15 OCTOBER 2020

Dear Dr. Fauci,

We are writing with great pleasure to invite you to present at the 4th HIV Research for Prevention Conference (HIVR4P 2020) in Cape Town, South Africa, from 11-15 October 2020. HIV Research for Prevention is the only global scientific conference focused exclusively on the challenging and fast-growing field of HIV prevention research. HIVR4P fosters interdisciplinary knowledge-exchange on HIV vaccines, microbicides, PrEP, treatment as prevention and biomedical interventions as well as their related social and behavioural implications.

Details for the session(s) are listed below:

Session title:	HIV prevention 2020 – Where are we now and where are we going?
Session type:	Opening plenary
Suggested presentation title/topic:	Much accomplished; Much to do – An overview on HIV prevention research
Session description:	Today's plenary sets the stage for the conference week ahead, outlining the big-picture challenges we face in research, product development and access to prevention. Speakers will provide diverse perspectives on the state of the field today, the opportunities and obstacles ahead and priorities for action moving forward.
Session date and time:	Monday, 12 October 2020 - 16:00-18:00

Meet the Experts lunches

We invite you to host an informal table discussion at a Meet the Experts lunch on **14 October 2020, 12:00-13:00**. Daily meet the experts lunches provide early-career investigators and community advocates with valuable opportunities for informal, in-depth exchange with experts representing a cross-section of research issues, implementation challenges and HIV-affected communities.

As an invited-speaker, you would be eligible to receive:

- Complimentary conference registration;
- Roundtrip economy airfare arranged through the HIVR4P travel agency; and
- Accommodation at one of the hotels pre-blocked by the conference secretariat.

To accept this invitation, please reply to this email by **Thursday, 27 February** and include a photo and a brief biography. Please find also attached for your record the official invitation signed by the HIVR4P 2020 Co-Chairs.

We ask that you please send any questions to the HIVR4P Secretariat at secretariat@hivr4p.org.

Thank you for your consideration. We look forward to you joining us in Cape Town!

Sincerely,

From: Fauci, Anthony (NIH/NIAID) [E]

Tony,

Professor COPPIETERS and I, we send you our new simulations :

In summary, the USA COVID-19 epidemic model says :

- the final size of epidemic = more than 850610 people infected and detected;

- date of epidemic peak = +/- 7 April 2020 with theorical new cases - in one day during this peak - about +/- 35520;

- end of epidemic = +/- 19-28 June 2020 (we use two methods);

- mortality at the end of epidemic :

** if death rate 5% = +/- 42.530 deceased people (for the moment the death rate = 5%)

** if death rate 10% = +/- 85.060 deceased people

You reached 91,1 % of the theorical logistic curve.

Best regards.

Quirico

Tony,

We send you our new simulations.

In summary, the USA COVID-19 epidemic model says :

- the final size of epidemic = more than 779000 people infected and detected;

- date of epidemic peak = +/- 7 April 2020 with theorical new cases - in one day during this peak - about +/- 35063;

- end of epidemic = +/- 4-13 June 2020 (we use two methods);

- mortality at the end of epidemic :

** if dead rate 5% = +/- 40000 deceased people

** if dead rate 10% = +/- 80.000 deceased people

You reached 87.5 % of the theorical logistic curve.

Best regards.

Subject: estimation of dynamics of COVID-19 in USA

Professor Anthony FAUCY,

Sorry to disturb during the COVID-19 in USA.

But I would you inform about the COVID-19 in USA.

I'm medical doctor in Belgium.

With my teacher Professor Yves COPPIETERS (Ecole de santé publique - ULB - Brussels), we make simulations about the COVID-19 for many countries.

In summary, the USA COVID-19 epidemic model says :

- the final size of epidemic = +/- 462760 people infected and detected;

- date of epidemic peak = +/- 1- 2 April 2020 with theorical new cases - in one day during this peak - about +/- 28390;

- end of epidemic = +/- 15 May 2020;

- mortality :

** if dead rate 5% = +/- 23140 deceased people

** if dead rate 10% = +/- 46275 deceased people

If you are interrested by our simulations, you can contact us.

Best regards.

Religious education continues in different format during pandemic

Bishops in Amazon urge Peru to guard indigenous needs during pandemic

April 15, 2020
Volume 15

From the Neighborhood
by Frank Derosa

Frank DeRosa retired as Associate Publisher of The Tablet and director of the Diocesan Public Information Office in 2008

When I see Dr. Anthony Fauci on the TV screen explaining expertly everything we need to know about the coronavirus pandemic, I find myself thinking back to his father, Stephen Fauci, whose drugstore our family relied on back in the 1950s.

Steve Fauci was the neighborhood pharmacist.

The Fauci Pharmacy stood on the southwest corner of 13 th Ave. and 83 rd St., in the Dyker Heights section of Brooklyn, diagonally across from the Shrine Church of St. Bernadette. We lived two blocks away on 85 th .

Long ago parishioners like me remember what the store looked like, the soda fountain that ran along the right wall, the telephone booths at the left close to the entrance and the counter straight ahead down the center.

Whenever my mother sent me there, Mr. Fauci would be behind the counter, but it was a family enterprise. They lived in an apartment above the store, and if the patriarch wasn't serving you, his wife, Eugenia, or daughter, Denise, was there. Young Anthony, I've since learned, pitched in too, his father sending him out on his bike to deliver items to customers.

I've never met the man who has become the most important medical voice in the country. Nor have former parishioners that I've spoken to about him in recent days, like boyhood pals Anthony LoFrisco, from 80th St., now in Connecticut, and Bob Orlando, who lived on 84th, now a New Jersey resident, as well as Bishop Gerald Barbarito of the Palm Beach Diocese, from 11th Ave. But each remembers the pharmacy as a Dyker Heights institution.

While we don't know him personally, in a sense he's become everyone's friend. With his steady television presence, he's imparted his vast knowledge and straightforward advice in a trademark, sometimes gravelly or raspy, Brooklyn accent that has endeared him to people far and wide. You can't be anything but proud of someone of his prominence who came from the parish.

Anthony became known as Tony, as he tells it, when Father Flanagan, principal of Regis High School, decided to call him that on his first day as a freshman. The name stuck.

Tony took buses and trains to the Jesuit school in Manhattan, including the old Sea Beach Express. He traveled 70 minutes each way, did three hours of homework, captained the basketball team and excelled in the classroom.

I remember hearing that when Tony was a high schooler, he had a part-time job working in St. Bernadette's rectory, answering the phone and doing whatever else parishioners wanted him to do to put them in touch with one of the parish priests. In those days, the rectory had a priestly bonanza. There were four of them.

Because St. Bernadette's School had not yet been established, Tony went to Our Lady of Guadalupe School, where he was taught by Dominican Sisters. It was, and is, St. Bernadette's neighboring parish.

Like most kids, he loved sports. He played CYO baseball and basketball. At Dyker Park on 86th St., he and his friends developed skills in imitation of their heroes. A Yankee follower living in the midst of Brooklyn Dodgers fans who adored The Boys of Summer, he's said his favorite players were Joe DiMaggio and Mickey Mantle.

Tony's father and mother married at 18, after they graduated from New Utrecht High School. Steve went on to Columbia to study pharmacy.
Sometime after he opened his pharmacy, he became friends with Father Al Varriale, one of St. Bernadette's beloved parish priests. At one point, Steve, as a parent, and the priest known as Father V, who directed the parish's robust CYO sports program for youths, shared a concern. It was the easy availability of indecent

and immoral publications that they knew was a threat to the moral development of young people.
So, with the approval and support of the Diocese of Brooklyn, together they formed a diocesan commission against pornography. Both men are now long gone, and so is the commission, but it was a good idea, though it did not survive them.

Remarkably, just a few houses up the block from where Steve established his pharmacy, lived the Pellegrinos, another family of St. Bernadette's parishioners that produced a renowned medical professional. The eldest son, Edmund, became a bioethicist, a "preeminent" one, as one newspaper described him after he died. But he was more. He helped develop medical programs at Kentucky, Stony Brook and Tennessee Universities. Later, he took on the presidency of The Catholic University of America. Then, after completing his tenure there, he became, as physician and philosopher, the director of the Kennedy Institute of Ethics at Georgetown University.

Though years apart in age, both Dr. Fauci and Dr. Pellegrino became
Hippocratic stars, nurtured on the same block.

Only in Brooklyn, I say, not without bias.

Steve Fauci was known by members of his extended family and friends for his personality, kindness, sense of humor and wit, and for telling good stories. So they said in comments after he died in 2008.

Tony appears to have inherited Steve's gene for lightheartedness. His
daughter once told the Washington Post that her dad could be a "goofball. . .he works hard and does his thing, but he comes home and he's singing opera in the kitchen and dancing around."

That kind of calm can help a man maintain his balance as he deals with the pressure of talking to millions of people every day about the complexity of a global pandemic.

As one newsman said, "When Fauci appears on the screen, you turn up the volume."

He once said the Jesuits at Regis and Holy Cross College taught him the
importance of "precision of thought and economy of expression."

That's what he delivers every day: accurate information given concisely.

That's Tony Fauci, now a national treasure. And to think, he came from the neighborhood.

Dr. Anthony Fauci

THE PRESIDENT'S CORONAVIRUS GUIDELINES FOR AMERICA

Subject: Another Possible Tool in The Fight Against SARS-CoV-2 ?

Dr. Fauci---Forgive the crude and unsolicited manner in which I am attempting to reach out to you but I don't really KNOW any other way !
I am not a medical doctor nor am I a principle investigator. I am just a Cytologist employed in the Anatomic Pathology department at LA County-USC Medical Center here in Southern California.
But I have been reading a lot--- and in my own exploration I have come across several articles which suggest the possibility of using a class of agents called
SPHINGOSINE-1-PHOSPHATE RECEPTOR AGONISTS in combination with antivirals like oseltamivir (or perhaps Remdesivir?) to treat both the viral pathogen responsible for the current pandemic as well as the runaway immune response of the host leading to the oft fatal cytokine storms.

Apparently these compounds have been approved for flare-ups of multiple sclerosis, and have even been tried on Alzheimer's patients. The commonly known drug is FINGOLIMOD. But these papers that I have cited for you below seem to indicate that structural analogs of this compound could be important in damping down the dysregulated pro-inflammatory cascades which seem to be leading to DIC, alveolar exudates and diffuse alveolar damage, capillary leak syndrome and ultimately the multiple organ failure that is killing an unacceptably high number of people.

The fly in the ointment Dr. Fauci here is that these S-1-PR agonists have only been demonstrated to be effective in non-human primates and other mammals. And much of these studies on these compounds has been done not on coronaviruses but on influenza viruses.
So it would be a gamble. But is that not how we have learned much about human health and disease is by the gracious sacrifice of our animal cousins ? And might it not be a general effect that these sphingosine derivatives have on viral sepsis so that maybe what works for influenza might work for the coronavirus?
In the dire situation that many of the most critically ill COVID 19 patients find themselves, it seems they are on the precipice of a rapid demise once they begin to show certain key laboratory results---(spikes in D-DIMER, C-Reactive Protein, Serum Ferritin, prolongation of

prothrombin and APTT, increased cardiac troponin 1, surges in IL-6, IL-7, monocytic and macrophage chemo-attractant cytokines etc).

With patients isolated by these aberrant lab values, the window may be narrow but it may be a time where application of antiviral compounds in combination with these inflammatory modulators could have a striking impact on mortality? Indeed maybe even TWO different antivirals with differing mechanisms of action in combination with these S1-PR Agonists would even be better. And the possibilities of other combinations of course would be there for further exploration.

Fully cognizant of the Hippocratic Oath to 'first do no harm' I still believe that at least the medical rationale is sound for the inclusion of these agents into the possible arsenal of therapeutics for the more severe COVID 19 patients.

Please refer below to the studies I found particularly helpful or promising. Perhaps you can put together some 'teams' to further explore investigate these options ??

We all appreciate everything you have done, and continue to do !

Dr. Fauci:

I hope you are healthy and well. The Partnership for Public Service is honored to inform you that we have selected you as a finalist for the 2020 Samuel J. Heyman Service to America Medals, otherwise known as the Oscars of government service.

You were nominated by Francis Collins for your outstanding career at NIAID and the work you are currently doing on behalf of the American people to prepare, inform and protect lives in our country and around the world during this uncertain time. Your work truly embodies the best of government that we strive to recognize through the Sammies program.

Attached, I've included the profile we have drafted to summarize your work and accomplishments – both for recognizing you as a finalist and for having the selection committee vote for the award recipients. Should you have any edits or wish to add a personal quote, please send those to us at your convenience. We will be releasing your profile publicly with the rest of the finalists on Sunday, May 3.

Again, thank you for the work you do on behalf of the NIH and our country.

Best,

Max Stier

Dear Jeremy, Tony, Sanjay, George, Susan, and Richard,

I'm really looking forward to this panel on COVID-19 at the NAS Annual Meeting on Saturday, April 25th at 2:00-3:30 pm ET. There is tremendous excitement and enthusiasm, and registration is through the roof.

I am sending this note to do a last minute check to see if there is anything you need from me. I also want to check whether you are planning to use slides. Will you be sending your slides to us to project or use the share screen feature to advance your own slides? Regardless, it would be helpful to me if you could send me your slides for my preparation.

I would greatly appreciate it if you would respond to this email.

Best,
Victor

PS, [redacted] (b) (6), my special assistant, will be sending you additional information about the session logistics shortly.

Subject: RE: NAS Annual Meeting Session on COVID-19 -- Information regarding your Saturday April 25 participation

Dear all,

Thank you for agreeing to participate in a special late breaking session on the COVID-19 pandemic at the NAS annual meeting. Knowing how busy you are, I am sending this email in lieu of a call to prepare for the session.

As you know, this is a 90 minute session which aims to provide our audience with deeper insights into the latest developments in the COVID-19 response. I plan to hold an engaging discussion that covers the whole experience on dealing with this pandemic – from US to international, to preparedness and response, the biology of the virus, the state of diagnostic, treatment and vaccine development, and the importance of communication.

I will begin the session by providing brief (~3 min) opening remarks describing the circumstances of the pandemic. Then, I will introduce the panelists and you will each have 7 minutes to provide remarks. You may use a limited number of slides for illustration. I hope that each panelist will provide their own perspective and speak to the issues proposed below.

- Jeremy Farrar will discuss the global response to the pandemic, drawing from his experience as a global leader, the chair of the Scientific Advisory Group for the WHO's R&D Blueprint and as a member of the Global Preparedness Monitoring Board.
- Tony Fauci will discuss the US pandemic and provide his perspective as a member of the White House Coronavirus Task Force addressing the 2019–20 coronavirus pandemic.
- George Gao will discuss China's response to the pandemic and lessons learned for the rest of the globe.
- Susan Weiss will discuss the viral characteristics of SARS COV2 , insights into its pathobiology, immunity and development of a pan-CoV antiviral.
- Richard Hatchett will discuss the development of new vaccines and treatments against COVID-19.
- Sanjay Gupta will comment on the health system response to the pandemic and challenges related to communication and public engagement in responding to COVID-19.

Following remarks from each panelist, we will have a moderated discussion amongst ourselves – I will ask you a set of questions (15 mins) and then we will take questions from the web (25 mins). To prepare me to be your moderator, please send me any questions you would like me to ask you. For those of you who would like to have a prep call, please let me know and I will set it up.

Best,
Victor

Subject: NAS Annual Meeting Session on COVID-19 -- Information regarding your Saturday April 25 participation

Dear Speakers:

I am the logistical contact for the COVID-19 session that will be held as part of the Annual Meeting (online) program on Saturday, April 25 at 2:00 pm EDT. Thank you for agreeing to participate in this session. To help you with your planning, I have provided additional details below.

Please note that the session will be live webcast and the general public will also be able to watch the session. Video from the session will also be uploaded on the NAS YouTube channel (https://www.youtube.com/user/theNASciences) after the meeting. We will need to obtain signed speaker release forms for your participation in this session. I have attached the speaker release form for your review and submission. **Please return the signed speaker release form by Monday, April 13.**

Session speakers are asked to connect 30 minutes prior to the session start time (**by Saturday, April 25 at 1:30 pm EDT)** to allow the technical staff to check connections and prepare for the session. Details on how to connect will be sent before the meeting.

We will list you in our promotional materials as noted below. If this is incorrect, please let me know.

Anthony S. Fauci, Director, National Institute of Allergy and Infectious Diseases
Jeremy Farrar, Director, Wellcome Trust
George F. Gao, Director-General, Chinese Center for Disease Control & Prevention
Sanjay Gupta, Chief Medical Correspondent, CNN
Richard J. Hatchett, CEO, Coalition for Epidemic Preparedness Innovations
Susan R. Weiss, Professor of Microbiology, Perelman School of Medicine, University of Pennsylvania

Since many of us have moved to remote work environments, you may already be proficient with Zoom and other online meeting/collaboration applications. I am attaching a 'speaker guidelines' file in case you have any questions on how best to prepare for and stage your remote talk. We have technical staff available to help you become familiar with Zoom and its settings – such as "sharing your screen" (if you have slide presentations that need to be shown during your talk). We can arrange for a training session this week or next week. If you would like to schedule a session, please let me know as soon as possible.

Dr. Dzau's office will be in touch regarding the agenda for this session. If you have any other questions, please let me know.

Regards, Jenny

Subject: Re: A proposal to stop COVID-19 and reopen our schools and businesses

Dear Francis, Anthony, Cliff, Christopher, David, Maria, and Lawrence,

I hope you are all well. Attached is the updated set of four proposals on:

1) Rapid repurposing of antiviral drugs to treat COVID-19;
2) Expedited development of neutralizing monoclonal antibodies to treat COVID-19;
3) Rapid COVID-19 vaccine development;
4) Risk-reduced ways to reopen schools and businesses, and the healthcare system changes that are needed to enable them.

We hope you find these updated proposals useful, and would be happy to engage in any way that could be helpful.

Sincerely yours,

Ben Cravatt (Scripps), Lynn Goldman (GWU), Akiko Iwasaki (Yale), Scott Kemp (MIT), Michael Lin (Stanford), David Liu (Harvard/Broad), Michael Rosbash (Brandeis), Stuart Schreiber (Harvard/Broad), Ed Scolnick (Broad), Jonathan Simons (PCF), and Ramnik Xavier (MGH/Broad)

On Apr 19, 2020, at 8:48 PM, Collins, Francis (NIH/OD) [E] [redacted] (b) (6)> wrote:

Dear David et al.,

Thanks for forwarding this very thoughtful document, which presents a series of important recommendations – most of which I agree with. I don't know if you saw Friday's announcement (attached) of the new public private partnership called ACTIV (for Accelerating COVID-19 Therapeutic Interventions and Vaccines), but it has taken on most of the points you raise in sections 1 – 3 of your letter. I share your hopes that remdesivir will show benefit, and the current large NIH-sponsored RCT has completed enrollment and should reveal results in about a month. But of course we want to test multiple other interventions – both small molecules and antibody-based therapies, so we need our trial system to be optimized like never before. I will share your letter with the leaders of ACTIV, who are working with unprecedented speed to prioritize the next set of therapeutic candidates as well as pushing vaccine development programs to adopt exceptionally creative trial designs to test safety and efficacy (with full engagement by FDA).

Best regards, Francis

Subject: A proposal to stop COVID-19 and reopen our schools and businesses

Dear Francis,

I hope you are well.

I write on behalf of a group of citizen-scientists, most or all of whom you know. Motivated solely by our desire to help defeat the serious threat our nation and the world now faces, we wrote a set of four actionable, non-partisan proposals (attached) to produce safe and effective COVID-19 therapeutics and vaccines in the shortest possible timeframe, and to reopen our society in a manner that reduces the risk of future COVID-19 outbreaks.

We hope you find these ideas interesting, and might be willing to share this set of proposals with Dr. Tony Fauci, along with our willingness to discuss any part of the proposals with him if we can be helpful. We understand from our efforts to contact Dr. Fauci through email routes that his standard inbox may be too overwhelmed for our proposal to reach him.

The four proposals attached describe: (1) How to rapidly repurpose an antiviral drug to treat COVID-19 patients; (2) How to expedite the development of human antibody drugs to treat patients and to provide short-term protection for healthy individuals; (3) How to develop COVID-19 vaccines on an expedited time scale; and (4) How to reopen our businesses and schools in a manner that reduces the risk of future outbreaks and deaths.

Thank you for any help or thoughts you might be able to provide.

Sincerely yours,
Ben Cravatt (Scripps), Lynn Goldman (GWU), Akiko Iwasaki (Yale), Scott Kemp (MIT), Michael Lin (Stanford), David Liu (Harvard/Broad), Michael Rosbash (Brandeis), Stuart Schreiber (Harvard/Broad), Ed Scolnick (Broad), Jonathan Simons (PCF), and Ramnik Xavier (MGH/Broad)

>
> Dear Tony,
>
> I have always felt reassured when the good Dr. Fauci speaks, and now more than ever. As an American, a former colleague, a long-time admirer and student of your wisdom – thank you. We are all safer because of you, and the world will be a better place because of you. Again.
>
> As you know, I am now leading the ONE Campaign. We've been quite active with the ONEWorld Campaign, dedicated to the fight against this newest virus, and focused on Africa. We've made some progress on debt, and next up is a focus on ensuring that a vaccine, when it comes, is available to everyone.
>
> One of the things we want to do is educate people, in all of the places we work. It won't surprise you that of particular urgency amongst our partners in Africa is that facts and information get to people across the continent, but we also know that more facts are needed everywhere. So next month we are going to launch #PassTheMic, where every day for 19 days we will ask a celebrity to turn his or her social media channels over to an expert on COVID-19 for one day. So Julia Roberts might turn her Twitter account to you to talk about the critical elements needed to flatten the curve and slow the spread. Or Idris Elba could give up his Instagram to the head of the African CDC so that he can illustrate the impact COVID-19 will have across Africa and what that means for the rest of the world.
>
> We know artists want to be helpful right now, but that it is hard to know what to do. And we know there are experts like you out there who have the answers. We've thought about this a lot at ONE and wanted to do something we felt would truly have an impact. As we look ahead we know COVID-19 does not know borders and until it is beaten everywhere

we are not in the clear. We need a global response plan and we need it now. By turning over their platforms for the day, celebrity influencers will be donating one of their biggest assets – their followers – to YOU, giving you the platform you need (and we all need) to tell the world why a global response is critical. Because none of us are safe until all of us are safe.

We will work with each expert/celebrity pair to personalize the content to our and our celebrity partners' audiences – in North America, Europe and Africa, and help create content that both parties are happy with. We are now confirming our talent partners, and so far are getting a terrific response.

We know you're a busy man, so we've planned it so that the amount of time on your end would be minimal. But the impact would be maximal.

I'm attaching more information about the campaign. Please let me know what you think and if you have questions. Ideally we would like to get this off the ground in early May, so are hoping to confirm folks by April 28th at the latest. Our team will be in touch with your office to follow up.

Thanks as always for everything you do. All my best to you, Gayle

To: NIAID Announcements <NIAID-announce@niaid.nih.gov>
Subject: Platelet Donations Down are Down Amid Coronavirus Outbreak -- Please Donate

Dear Colleagues:

The NIH Platelet Donor Center has an urgent need for healthy individuals to give lifesaving platelets to patients. The need for platelet donations is especially acute now with the coronavirus pandemic. While social distancing and increased telework are necessary to contain and slow the spread of coronavirus, we have seen a marked decline in platelet and blood donations for our patients.

To alleviate this shortage, NIAID and the Department of Transfusion Medicine (DTM) are co-sponsoring a two-week Platelet Drive from March 30 – April 10. Platelet collections, as well as whole blood and Double Red Cell donations, can only be made at the NIH Blood Bank on campus in Building 10, Room 1C713 Monday through Friday from 8:00 am to 5:00 pm. The Platelet Center at Fishers Lane is temporarily closed and platelet collections are now on the main campus through at least the next 30 days. This move helps to ensure that blood donors are protected by visitor screening, minimizing possible exposure to individuals at risk.

What is a double red cell donation? A double red cell donation enables donors to donate two units of red blood cells in one visit. During a procedure called apheresis, whole blood is separated through a cell separator and red blood cells are collected. The remainder of the blood components are returned to the donor along with saline to replace the lost volume.

I encourage participation of all employees who are eligible to provide a donation to benefit our NIH patients. I understand employees may be hesitant to participate under the current conditions, but I would like to reassure you that blood donation is a safe process. Additional precautions have been put in place at our Blood Bank to help prevent the spread of infection and protect the health of donors and staff.

Thank you to all who support our quarterly platelet drives. Your efforts provide a lifeline for our patients. Those who participated in the last drive are now eligible to help once again. In appreciation of your dedication to helping others, NIAID grants administrative leave to any NIAID federal employee who donates platelets at the NIH Blood Bank. Specifically, you will be granted 4 hours of administrative leave to be used immediately following your platelet donation appointment. As always with such activities, please notify your supervisor for approval prior to donating at the NIH Platelet Center.. Contractor employees should speak directly to their contract companies to determine what leave options are available. Please contact the Donor Center at 301-496-4321 to schedule your appointment. Let the Donor Center staff know you are with the NIAID Platelet/Double Red Cell Drive. They will answer eligibility questions and provide information about the donation process.

Thank you for considering donating during this stressful time. Best regards.

Sincerely,
A.S. Fauci

Attachments: Workforce_Proposal_Chicago_April2020.pdf

Bob:

Please take a look at this. This question evolved from a teleconference that I had 2 nights ago with people "in the trenches" including Alison Arwady (Chicago). The question is what will be the relationship between the public health workforces at the federal and local levels. Youi had spoken of the CDC people that will be assigned locally and that will help build up a local workforce. How will CDD interact and relate to the locals. Is there any possibility of Federal funding of their proposal (see attachment). If not, do you have any suggestions for them? I can discuss this with you today at the Task Force meeting. Thanks.

Best,
Tony

Subject: Dr. Fauci asked me to send Chicago question

Dear Patty,

Last night on his call with public health leaders from cities across the country, Dr. Fauci asked me to send him/you my follow-up question from Chicago:

How **will the necessary public health workforce expansion (e.g. for wide-scale case investigation, contact tracing, linkage to care, community testing, and vaccination) be supported at the federal level?**

Our understanding is that state or local jurisdictions will be able to develop their own workforces rather than supporting a single workforce at the federal level, and we agree with this approach, but it would be very helpful to understand next steps and potential timelines, particularly as the reopening drumbeat gets louder.

For example, Chicago has developed a local plan/proposal (attached) that would meet our local needs, help address some of our underlying race and economic equity concerns, and build on our existing community and clinical partnerships. We have shared it with some partners, but it is not at all clear how/whether/when/how much funding might be available. Given the need to quickly expand our workforce and plan ahead, it would be very helpful to get a sense of:

a. How much funding/support might be available, and how that will be determined
b. Whether funding might come through HHS/CDC (our preferred mechanism), FEMA, or another mechanism
c. Will support be available in weeks or months...and for how long—we are strongly advocating for 5 years, similar to what was done for Ebola
d. Any other information about how our local or state plans need to be adapted to fit into federal thinking on this approach

Thank you so much; I deeply appreciate Dr. Fauci taking the time to meet with us directly and hear our concerns.

Allison

Subject: Notes from call with Dr. Fauci

Hello - Thanks for all for a very informative and sobering discussion last night. I've provided bullets below to capture the main points. Please add or change as needed. I've kept this relatively short but can supply a full recording of the call if you want it.

We will have another call next Tuesday.

David

PPE supplies:
- while hospitals are in better shape than a few weeks ago, significant shortages remain at long-term care facilitates, skilled nursing facilitates, outpatient settings like doctors' offices and urgent care clinics, shelters, prisons. Gowns are the biggest problem, but gloves, masks and shields are also short. Doctors offices are closing for lack of PPE.
- each city is trying to solve these shortages in a short-term, piecemeal way. They need a longer-term solution to stabilize availability. Outpatient settings are looking to health departments to provide supplies, something HDs are not set up to do.
- testing in most places still requires PPE use (e.g. no availability of anterior nasal swabs) and the PPE shortages are severely limiting testing scale up.
- even at hospitals, supply limitations make re-opening elective surgeries and other procedures impossible at this stage.
- If considering re-opening businesses, this will drastically increase PPE needs to a whole new sector.

TESTING challenges:
- Each city reported that, despite improvements, a very limited number of tests are being performed compared to need.
- Supply shortages are the biggest challenge: swabs, PPE, sample kits, reagents are the biggest obstacles. Not clear where this is going to come from or who is responsible for addressing problems.
- Private labs limit number of sample kits distributed each week. In places where public labs are available, there is a push to get providers to use the public labs. But many places don't have public labs.
- There is no clear guidance on how to prioritize who gets tested first. So, in some places, that means that people at lower-risk are being testing but people at greater risk (due to symptoms,

exposure, high-risk living/work environment, etc) are not being testing. Guidelines are needed to help prioritize where testing resources are used first.
- Public testing produces skewed results. Testing becomes available only to those who can make an appointment and who can drive to the site. This means many lower-priority people get tested but high-priority people do not. This skews understanding of positivity rates.
- Some labs are underutilized - but the reason is that there are breakdowns in the supply chain that make it difficult to test people and get tests to the labs. (e.g.) [redacted] (b) (4)
- Reimbursement is an obstacle. CMS offering to cover test costs ($100 per test) would help get labs to do more testing. It would not solve the problem, but it would help.
- Proliferation of unvalidated antibody tests is causing confusion. High rates of false results, misinterpretation of what results mean (e.g. telling people who test antibody positive that they must quarantine for two weeks). Chicago spends a lot time shutting down these testing sites as they make things harder and use up supplies.
- there is increasing pressure to reach a target number of tests performed each day in order to get to 're-opening'. But the number needed is contextual based on the environment, population - there isn't one 'right' number for everywhere.
- Need better public messaging on difference between virology and serologic tests.
- Current testing capacity is no where near what is needed to make informed decisions about re-opening.

TESTING: reporting challenges
- Current PoC tests have no link to provide results to health departments. Many outpatient facilities and SNFs have no system for reporting test results to HDs. Need electronic link for reporting PoC test results.
- While aggregate positive tests may be reported, negative results are not.
- Impossible to really understand population levels of infection because (1) number of tests performed is too low and (2) not testing the 'right' people
- Every one is pushing for rapid scale up of antibody tests, but we still don't know what the results of these tests mean and how to apply them to policy development.
- CDC and NIH will each coordinate sero-surveys. No details on CDC approach yet. NIH study is up. Still not clear how to use the results of these studies, but useful to collect data now and apply it as knowledge grows. Locally-coordinate aero-surveys can be helpful but only if tests are highly validated.

The Future:
- How many tests should we being doing? How much PPE/testings/beds/staff will be needed in the coming year? Next winter, we will face dual flu and COVID outbreaks, without stable testing capacity, how will we differentiate between the two?
- What are the plans for contact tracing? Who will recruit and train? Is there a federal plan or guidelines for this? How will it be paid for? What do we do to effectively isolate those infected?

Subject: FOR ASF REVIEW: Draft PR re: launch of hydroxychloroquine/azithromycin study

Hi Dr. Fauci,

Please find attached for your review a draft press release describing the launch of the ACTG hydroxychloroquine/azithromycin study for COVID-19. NIAID will issue the release after the first participant(s) has enrolled, which is currently anticipated around May 1.

The following is the quote we have drafted for you:

"We urgently need a safe and effective treatment for COVID-19. Repurposing existing drugs is an attractive option because these medications have undergone extensive testing, allowing them to move quickly into clinical trials and accelerating their potential approval for COVID-19 treatment," said NIAID Director Anthony S. Fauci, M.D. "Although there is anecdotal evidence that hydroxychloroquine and azithromycin may benefit people with COVID-19, we need solid data from a large randomized, controlled clinical trial to determine whether this experimental treatment is safe and can improve clinical outcomes."

Thanks much,
Kathy

Dear Francis and Tony,

Thank you for a great conversation. Jacob, Bronwyn, and I stayed on a moment after you left and talked about how inspired we are by each of you and by the camaraderie between you two. Jacob added those two are national treasures, and Bronwyn and I wholeheartedly agreed.

Grateful for you both,

Pardis

Subject: Global Health Leaders Call, Thursday, 23 April, 14:00 CET

Dear colleagues,

Ahead of the Global Health Leaders Call at 14.30 CET today, please find an epidemiological update and analysis attached, in addition to **the "Considerations in adjusting public health and social measures in the context of COVID-19"** interim guidance document, which was published on the WHO website on 16 April.

Please find below, the key questions for your consideration and input.

1. What is your view on the latest epidemiology, virus transmission and severity in affected countries ?
2. What are the emerging issues/challenges that you see as important ?
3. What should be the priorities for the 1-2 weeks?
4. Any other issues you see as important?

You will be able to connect via the Webex connection below. If you experience any technical difficulties, please contact the WHO HQ EOC operator at: +41 22 79 15 533 or via email: shoc@who.int.

Best,

Sophia

Subject: Greetings- NOT urgent

Hi Tony,

This is Lou Ignarro from UCLA. You and I shared the stage in the "Shoe" at the Ohio State University a few years ago, where you gave the Graduation Address to the undergraduate seniors. I was on stage with you, to receive an award for my basic biomedical research which resulted in my being awarded the Nobel Prize in Medicine in 1998. I recall the nice conversations we were enjoying with Sanjay Gupta while robing for the event.

Thanks for the truly spectacular job you are doing, regarding the coronavirus pandemic. We Nobel Laureates especially regard your work as the most important during our lifetime. Thank you and God bless.

My best wishes,

Lou Ignarro

Dear Dr. Fauci -- many thanks for your time today; we are thrilled to have you as part of the TIME 100 Talks, which will go live tomorrow.

In the meantime, I wanted to double check the reference to the study you mentioned about the east and west coast strains and their potential difference in virulence. Realize it's preliminary, so just wanted to confirm any references we make to it. I checked the biorxiv and medrxiv but didn't find the citation. Would appreciate the journal if it was published. Many thanks! Alice

Subject: Request for Dr. Fauci + Ryan Zimmerman Pros For Heroes | COVID-19 Relief Fund

Jennifer & Courtney-

Hello! Our friends from Steph Curry's team passed along your contact information to us and we work at CAA where we represent World Series Champion, Ryan Zimmerman.

Ryan wanted to express his gratitude first & foremost to Dr. Fauci, the entire team and all those behind the scenes working around the clock.

Ryan recently launched the Pros for Heroes Covid-19 Fund last week, with more than 30 professional athletes supporting and over $300,000 raised across 1,400 separate donations. (>www.prosforheroes.org<). Since its launch last Tuesday, contributions from the Pros For Heroes Fund have gone directly towards PPE needs throughout the Inova hospital network throughout the mid-Atlantic and have helped provide meals to those critical care front-line workers - keeping these front-line heroes covered at work and comfortable at home.

If Dr. Fauci was up to it, Ryan would love to host either a short 15 minute Q&A on his Facebook to continue raising awareness for how we need to be responding to the ongoing crisis. Or even simply thank Dr. Fauci for the tireless work he is doing and shine a light on how folks can support these critical frontline workers.

We are also open to what you think would work best! Would there any openings that would work best?

We know Dr. Fauci is big baseball fan, and of course we are all huge fans of his! If we can ever be supportive or help navigate anything in the world of pop culture, please do not hesitate to ask.

Warmest wishes,

Judee Ann

Coronavirus's ability to mutate has been vastly underestimated, and mutations affect deadliness of strains, Chinese study finds

- The most aggressive strains of Sars-CoV-2 could generate 270 times as much viral load as the least potent type
- New York may have a deadlier strain imported from Europe, compared to less deadly viruses elsewhere in the United States

Stephen Chen in Beijing
Published: 10:41pm, 20 Apr, 2020
Updated: 1:33am, 21 Apr, 2020

A team led by Professor Li Lanjuan has studied how the novel coronavirus mutates and possible implications for the pandemic. Photo: EPA-EFE

A new study by one of China's top scientists has found the ability of the new coronavirus to mutate has been vastly underestimated and different strains may account for different impacts of the disease in various parts of the world.

Professor Li Lanjuan and her colleagues from Zhejiang University found within a small pool of patients many mutations not previously reported. These mutations included changes so rare that scientists had never considered they might occur.

They also confirmed for the first time with laboratory evidence that certain mutations could create strains deadlier than others.

"Sars-CoV-2 has acquired mutations capable of substantially changing its pathogenicity," Li and her collaborators wrote in a non-peer reviewed paper released on preprint service medRxiv.org on Sunday.

Li's study provided the first hard evidence that mutation could affect how severely the virus caused disease or damage in its host.

Li took an unusual approach to investigate the virus mutation. She analysed the viral strains isolated from 11 randomly chosen Covid-19 patients from Hangzhou in the eastern province of Zhejiang, and then tested how efficiently they could infect and kill cells.

The deadliest mutations in the Zhejiang patients had also been found in most patients across Europe, while the milder strains were the predominant varieties found in parts of the United States, such as Washington state, according to their paper.

A separate study had found that New York strains had been imported from Europe. The death rate in New York was similar to that in many European countries, if not worse.

But the weaker mutation did not mean a lower risk for everybody, according to Li's study. In Zhejiang, two patients in their 30s and 50s who contracted the weaker strain became severely ill. Although both survived in the end, the elder patient needed treatment in an intensive care unit.

This finding could shed light on differences in regional mortality. The pandemic's infection and death rates vary from one country to another, and many explanations have been proposed.

Genetic scientists had noticed that the dominant strains in different geographic regions were inherently different. Some researchers suspected the varying mortality rates could, in part, be caused by mutations but they had no direct proof.

The issue was further complicated because survival rates depended on many factors, such as age, underlying health conditions or even blood type.

In hospitals, Covid-19 has been treated as one disease and patients have received the same treatment regardless of the strain they have. Li and her colleagues suggested that defining mutations in a region might determine actions to fight the virus.

"Drug and vaccine development, while urgent, need to take the impact of these accumulating mutations ... into account to avoid potential pitfalls," they said.

Li was the first scientist to propose the Wuhan lockdown,according to state media reports. The government followed her advice and in late January, the city of more than 11 million residents was shut down overnight.

The sample size in this most recent study was remarkably small. Other studies tracking the virus mutation usually involved hundreds, or even thousands, of strains.

Li's team detected more than 30 mutations. Among them 19 mutations – or about 60 per cent – were new.

They found some of these mutations could lead to functional changes in the virus' spike protein, a unique structure over the viral envelope enabling the coronavirus to bind with human cells. Computer simulation predicted that these mutations would increase its infectivity.

To verify the theory, Li and colleagues infected cells with strains carrying different mutations. The most aggressive strains could generate 270 times as much viral load as the weakest type. These strains also killed the cells the fastest.

It was an unexpected result from fewer than a dozen patients, "indicating that the true diversity of the viral strains is still largely underappreciated," Li wrote in the paper.

Professor Li Lanjuan is a leading Chinese epidemiologist. Photo: Xinhua

The mutations were genes different from the earliest strain isolated in Wuhan, where the virus was first detected in late December last year.

The coronavirus changes at an average speed of about one mutation per month. By Monday, more than 10,000 strains had been sequenced by scientists around the globe, containing more than 4,300 mutations, according to the China National Centre for Bioinformation.

Most of these samples, though, were sequenced by a standard approach that could generate a result quickly. The genes were read just once, for instance, and there was room for mistakes.

Li’s team used a more sophisticated method known as ultra-deep sequencing. Each building block of the virus genome was read more than 100 times, allowing the researchers to see changes that could have been overlooked by the conventional approach.

The researchers also found three consecutive changes – known as tri-nucleotide mutations – in a 60-year-old patient, which was a rare event. Usually the genes mutated at one site at a time. This patient spent more than 50 days in hospital, much longer than other Covid-19 patients, and even his faeces were infectious with living viral strains.

“Investigating the functional impact of this tri-nucleotide mutation would be highly interesting,” Li and colleagues said in the paper.

Professor Zhang Xuegong, head of the bioinformatics division at the National Laboratory for Information Science and Technology at Tsinghua University, said ultra-deep sequencing could be an effective strategy to track the virus’ mutation.

“It can produce some useful information,” he said.

But this approach could be much more time consuming and costly. It was unlikely to be applied to all samples.

“Our understanding of the virus remains quite shallow,” Zhang said. Questions such as where the virus came from, why it could kill some healthy young people while generating no detectable symptoms in many others still left scientists scratching their heads.

“If there is a discovery that overturns the prevailing perception, don’t be surprised.”

Dear Francis,

Congratulations on your launch of Public Private Partnership to speed COVID 19 vaccine and treatment options. This is very timely and much needed. Kudos to your leadership.

I am sure you are aware of a global coordinating effort to accelerate vaccines, diagnostics and therapeutics. I have been part of the conversation and planning along with Jeremy Farrar, Richard Hatchett, Seth Berkley, Chris Elias, Paul Stoffels etc. Recently WHO, Gates Foundation and European Commission have been leading the planning. This has advanced rapidly and is in the final stages in development that will be soon announced. It has involved European Commission, Germany, Japan, UK, Norway, France, Saudi as well as Gates Foundation, WHO, World Bank, Wellcome Trust, GAVI, Global Fund, CEPI, GPMB and private sector industry. The initiative will begin with a Pledge conference for $8B as a starting point. This will be led by President von der Leyen and is co-chaired by the above country leaders. This will occur on May 4. In addition by the end of this week or early next week there will be an announcement on the global coordinating structure with will involve Gates, WHO etc.

I am writing to be sure that you and the White House are aware of these upcoming events. Can you share this information with the White House? Besides you, who else should I share this information with? I will be happy to send you background documents if you wish.

Please call me anytime.

Best,

Victor

Dear Tony,

I will always remember our amazing collaboration during the HIV/AIDS days in the 1980s, when I served as AIDS Advisor to Bob Windom, the DHHS Assistant Secretary for Health during President Reagan's administration. And now, I am delighted and amazed to watch you so adroitly maneuver the COVID-19 scientific policies and keep them front and center in the current White House!!

[redacted] (b) (6), Michael Oxman, has worked with John Zaia at City of Hope, and a Mayo/Hopkins/Michigan State consortium for a trial of IM COVID-IG as a preferred method for treatment and prevention of COVID-19.

This week, Mike expects to complete the protocol for a placebo (normal IG)-controlled trial of IM COVID-IG prophylaxis in at-risk healthcare workers who are engaged in direct patient care at UCSD, but they need a modicum of support. Mike asked if I would reach out to see if NIAID might provide of support for this effort, using IM, as opposed to IV, COVID-IG.

I've copied Mike, who has provided the attached background information.

Tony, with all my respect and admiration for what you are doing for the U.S. and for all of us.

Dear Dr Fauci,

My name is Saahil, and I'm a director at Cal Hacks, a student organization at the University of California, Berkeley. This upcoming weekend, we will be hostinghack:now, a 36-hour global online hackathon to foster innovative and technical solutions to tackle the challenges faced around the current COVID-19 pandemic. We're projected to have 1,500 participants from around the world. I'm reaching out to invite you to be our opening ceremony speaker.

Specifically, this Friday night, April 24, from 7-8pm Pacific Daylight Time, we're going to be hosting the opening ceremony of our event. At this time, we want to inspire our hackers to help solve global challenges related to health and community. **We would be absolutely honored if you would join us to speak at our opening ceremony for just a few minutes to share your experiences with and response to the COVID-19 pandemic.** Your unique perspective and expanse of knowledge makes you the most qualified person, and we would be humbled to include you as our opening ceremony speaker. Please let us know if you are able to accept this invitation.

Stay safe,

Saahil Chadha

Subject: Potential SPAM:Message for Dr Anthony FAUCI

I would be very grateful to you if you can forward the following mail to Dr Anthony FAUCI.

Many thanks.
Sincerely yours,

Pr Jean-Louis TOURAINE, Lyon and Paris, France.

Dear Tony,

You may remember, that we have met repeatedly and worked in parallel and in association, during the early years of the HIV epidemic.

You and I have been trained in immunoly. Both of us are much sollicitated to help facing and fighting the covid-19 epidemic.

During the past years , as well as recently, I have followed with great interest and respect your accomplishments and your advices in the fights against epidemics. I would be extremely grateful to you if you can provide me with the most recent and pertinent scientific and population data concerning covid-19. I know how extremely busy you are but maybe a collaborator of yours whether he can send me the data via e-mail [redacted] (b) (6) This will allow me to give more documented informations to the French President and Government. Cooperation between countries will be crucial against covid-19 as it has been against HIV and other agents.

I look forward to seeing you again in quieter times.
Many thanks and very best personal regards.

Jean-Louis TOURAINE, M.D., Ph. D., M.P.

Director of U.S. agency key to helming vaccine development leaves role suddenly amid coronavirus pandemic

By Nicholas Florko @NicholasFlorko
April 21, 2020

Rick Bright *HHS*

WASHINGTON — Rick Bright, one of the nation's leading vaccine development experts and the director of the Biomedical Advanced Research and Development Authority, is no longer leading the organization, officials told STAT.

The shakeup at the agency, known as BARDA, couldn't come at a more inopportune time for the office, which invests in drugs, devices, and other technologies that help address infectious disease outbreaks and which has been at the center of the government's coronavirus pandemic response.

Bright, whose departure was confirmed by three industry sources and two current Trump administration sources, will instead move into a narrower role at the National Institutes of Health overseeing a similar but limited public-private partnership aimed at vaccine development. Gary Disbrow, Bright's former deputy at BARDA, will serve as the acting director of the office, an HHS spokesperson confirmed to STAT.

BARDA was expected to play an even larger role in the coming months; Congress more than tripled BARDA's budget in the most recent coronavirus stimulus package. Already, the office has a role in some of the splashiest Covid-19 projects, including partnerships with Johnson & Johnson and Moderna Therapeutics, both of which are developing potential Covid-19 treatments.

Related:

This tiny federal agency was built to respond to a crisis like coronavirus. Now that it's here, is BARDA ready?

BARDA has been plagued with management issues virtually since its creation in 2006, with much of the criticism aimed at a contracting department that some say is unresponsive to industry partners. The office has only had two permanent directors since its creation in 2006. Bright has led the organization since 2016.

None of the sources articulated the reason for Bright's departure, though several mentioned recent chafing between Bright and Bob Kadlec, the HHS Assistant Secretary for Preparedness and Response, which has oversight over BARDA.

An HHS spokesperson confirmed that Bright will work on a recently announced NIH public-private partnership with 16 drug makers aimed at developing vaccines and treatments for Covid-19.

"Dr. Rick Bright will transfer the skills he has applied as Director of the [BARDA] to the [NIH]. ... Dr. Bright brings extensive experience and expertise in facilitating powerful public-private partnerships that advance the health and well-being of the American people," the spokesperson said.

Bright did not immediately respond to requests for comment.

Bright's career has largely centered around vaccine and drug development. His work at the Centers for Disease Control and Prevention focused on influenza viruses, antiviral drugs and tests. He has also worked in the biotechnology industry and served as an advisor to the World Health Organization. Before becoming BARDA director, he led the agency's Influenza and Emerging Infectious Diseases Division.

Subject: Attention: COVID-19 legislative package bill text released
Importance: High

Good Afternoon,

At 4p.m. today (4/21), the U.S. Senate is expected to hold a vote by unanimous consent on the "Paycheck Protection Program and Health Care Enhancement Act" (bill text attached). In particular please note that the legislative package includes the following supplemental appropriations for diagnostic testing (pages 13-15 of attached):

- **NIH/OD** – not less than **$1B** to develop, validate, improve, and implement testing and associated technologies; to accelerate research, development, and implementation of point of care and other rapid testing; and for partnerships with governmental and non-governmental entities to research, develop, and implement the activities outlined in this proviso.
  - funds in the preceding proviso may be transferred to the accounts of the Institutes and Centers of the National Institutes of Health for the purposes specified in the preceding proviso
  - the transfer authority provided in the preceding proviso is in addition to all other transfer authority available to the NIH
- **NCI** – not less than **$306M** to develop, validate, improve, and implement serological testing and associated technologies for the purposes specified under this paragraph in this Act:
- **NIBIB** – not less than **$500M** to accelerate research, development, and implementation of point of care and other rapid testing related to coronavirus:
- **CDC** – not less than **$1B** for surveillance, epidemiology, laboratory capacity expansion, contact tracing, public health data surveillance and analytics infrastructure modernization, disseminating information about testing, and workforce support necessary to expand and improve COVID–19 testing
- **BARDA** – not less than **$1B** for necessary expenses of advanced research, development, manufacturing, production, and purchase of diagnostic, serologic, or other COVID–19 tests or related supplies, and other activities related to COVID–19 testing at the discretion of the Secretary
- **FDA** – **$22M** to support activities associated with diagnostic, serological, antigen, and other tests, and related administrative activities

We will keep you updated on any developments related to this legislation. Please let us know if you have any questions.

Thanks,
Chase

Subject: Request for Dr. Fauci + Ryan Zimmerman Pros For Heroes | COVID-19 Relief Fund

Jennifer & Courtney-

Hello! Our friends from Steph Curry's team passed along your contact information to us and we work at CAA where we represent World Series Champion, Ryan Zimmerman.

Ryan wanted to express his gratitude first & foremost to Dr. Fauci, the entire team and all those behind the scenes working around the clock.

Ryan recently launched the Pros for Heroes Covid-19 Fund last week, with more than 30 professional athletes supporting and over $300,000 raised across 1,400 separate donations. (www.prosforheroes.org). Since its launch last Tuesday, contributions from the Pros For Heroes Fund have gone directly towards PPE needs throughout the Inova hospital network throughout the mid-Atlantic and have helped provide meals to those critical care front-line workers - keeping these front-line heroes covered at work and comfortable at home.

If Dr. Fauci was up to it, Ryan would love to host either a short 15 minute Q&A on his Facebook to continue raising awareness for how we need to be responding to the ongoing crisis. Or even simply thank Dr. Fauci for the tireless work he is doing and shine a light on how folks can support these critical frontline workers.

We are also open to what you think would work best! Would there any openings that would work best?

We know Dr. Fauci is big baseball fan, and of course we are all huge fans of his! If we can ever be supportive or help navigate anything in the world of pop culture, please do not hesitate to ask.

Warmest wishes,

Judee Ann

Hi Henry and Alice,

I am not sure how we want to handle interview requests like this. Would someone on the Panel want to/be allowed to speak to the press about the guidelines?

I am happy to politely decline if we want to handle it that way.

It is nice to see that we are being picked up by the press already though. I am glad people are already expressing interest.

Just let me know!
Claire

China / Science

Coronavirus's ability to mutate has been vastly underestimated, and mutations affect deadliness of strains, Chinese study finds

- The most aggressive strains of Sars-CoV-2 could generate 270 times as much viral load as the least potent type
- New York may have a deadlier strain imported from Europe, compared to less deadly viruses elsewhere in the United States

A team led by Professor Li Lanjuan has studied how the novel coronavirus mutates and possible implications for the pandemic. Photo: EPA-EFE

A new study by one of China's top scientists has found the ability of the new coronavirus to mutate has been vastly underestimated and different strains may account for different impacts of the disease in various parts of the world.

Professor Li Lanjuan and her colleagues from Zhejiang University found within a small pool of patients many mutations not previously reported. These mutations included changes so rare that scientists had never considered they might occur.

They also confirmed for the first time with laboratory evidence that certain mutations could create strains deadlier than others.

"Sars-CoV-2 has acquired mutations capable of substantially changing its pathogenicity," Li and her collaborators wrote in a non-peer reviewed paper released on preprint service medRxiv.org on Sunday.

Li's study provided the first hard evidence that mutation could affect how severely the virus caused disease or damage in its host.

Li took an unusual approach to investigate the virus mutation. She analysed the viral strains isolated from 11 randomly chosen Covid-19 patients from Hangzhou in the eastern province of Zhejiang, and then tested how efficiently they could infect and kill cells.

The deadliest mutations in the Zhejiang patients had also been found in most patients across Europe, while the milder strains were the predominant varieties found in parts of the United States, such as Washington state, according to their paper.

A separate study had found that New York strains had been imported from Europe. The death rate in New York was similar to that in many European countries, if not worse.

But the weaker mutation did not mean a lower risk for everybody, according to Li's study. In Zhejiang, two patients in their 30s and 50s who contracted the weaker strain became severely ill. Although both survived in the end, the elder patient needed treatment in an intensive care unit.

This finding could shed light on differences in regional mortality. The pandemic's infection and death rates vary from one country to another, and many explanations have been proposed.

Genetic scientists had noticed that the dominant strains in different geographic regions were inherently different. Some researchers suspected the varying mortality rates could, in part, be caused by mutations but they had no direct proof.

The issue was further complicated because survival rates depended on many factors, such as age, underlying health conditions or even blood type.

In hospitals, Covid-19 has been treated as one disease and patients have received the same treatment regardless of the strain they have. Li and her colleagues suggested that defining mutations in a region might determine actions to fight the virus.

"Drug and vaccine development, while urgent, need to take the impact of these accumulating mutations ... into account to avoid potential pitfalls," they said.

Li was the first scientist to propose the Wuhan lockdown,according to state media reports. The government followed her advice and in late January, the city of more than 11 million residents was shut down overnight.

The sample size in this most recent study was remarkably small. Other studies tracking the virus mutation usually involved hundreds, or even thousands, of strains.

Li's team detected more than 30 mutations. Among them 19 mutations – or about 60 per cent – were new.

They found some of these mutations could lead to functional changes in the virus' spike protein, a unique structure over the viral envelope enabling the coronavirus to bind with human cells. Computer simulation predicted that these mutations would increase its infectivity.

To verify the theory, Li and colleagues infected cells with strains carrying different mutations. The most aggressive strains could generate 270 times as much viral load as the weakest type. These strains also killed the cells the fastest.

It was an unexpected result from fewer than a dozen patients, "indicating that the true diversity of the viral strains is still largely underappreciated," Li wrote in the paper.

Professor Li Lanjuan is a leading Chinese epidemiologist. Photo: Xinhua

The mutations were genes different from the earliest strain isolated in Wuhan, where the virus was first detected in late December last year.

The coronavirus changes at an average speed of about one mutation per month. By Monday, more than 10,000 strains had been sequenced by scientists around the globe, containing more than 4,300 mutations, according to the China National Centre for Bioinformation.

Most of these samples, though, were sequenced by a standard approach that could generate a result quickly. The genes were read just once, for instance, and there was room for mistakes.

Li's team used a more sophisticated method known as ultra-deep sequencing. Each building block of the virus genome was read more than 100 times, allowing the researchers to see changes that could have been overlooked by the conventional approach.

The researchers also found three consecutive changes – known as tri-nucleotide mutations – in a 60-year-old patient, which was a rare event. Usually the genes mutated at one site at a time. This patient spent more than 50 days in hospital, much longer than other Covid-19 patients, and even his faeces were infectious with living viral strains.

"Investigating the functional impact of this tri-nucleotide mutation would be highly interesting," Li and colleagues said in the paper.

Professor Zhang Xuegong, head of the bioinformatics division at the National Laboratory for Information Science and Technology at Tsinghua University, said ultra-deep sequencing could be an effective strategy to track the virus' mutation.

"It can produce some useful information," he said.

But this approach could be much more time consuming and costly. It was unlikely to be applied to all samples.

"Our understanding of the virus remains quite shallow," Zhang said. Questions such as where the virus came from, why it could kill some healthy young people while generating no detectable symptoms in many others still left scientists scratching their heads.

"If there is a discovery that overturns the prevailing perception, don't be surprised."

Tony,

Hope you're well and thank you again for all that you are doing. I got this out today in the New Yorker and I'll be talking to most of the Democratic caucus today about what we're doing in Mass and the developing world.

Hang in there and let me know if there is anything more I can do. Mass is tough but we're going to have a 1000 contact tracers very soon. Every day we learn so much, which is why it's so important for everyone to get started.

Jim

Ed:

Thank you for your note and for sending this. The outline that you provide is exactly in sync with what we are already doing and have definitive plans to do with regard to classic antivirals, monoclonal antibodies, and a variety of vaccine candidates. As you know, the candidate developed here at NIH in collaboration with Moderna is well into phase 1 trials and at least 2 others are entering into phase 1 trials.

Best regards,
Tony

Tony . I hope your mail box is not so full that there is room for this. A group of concerned scientists from different parts of the country was organized to try to encapsulate and focus the national effort against Covid. This document has been shared with the White House although we are not sure if it has had any effect on their plans. It has also been shared with The Gates Foundation and a few other business and academic leaders. We think we have been fairly comprehensive in our considerations and recommendations. I hope you will find this helpful. We would greatly appreciate a conversation with you after you have had an opportunity to digest the content of the proposal. If there is anything else we can do to help you in this National emergency, we stand ready to help. When I was at Merck ,we led the successful
effort to make HIV a manageable disease and we dramatically lowered the death rate as a result of the drugs we made ,and the first triple therapy trial during the HIV pandemic. We hope we can help do the same for The Covid Pandemic Best wishes Ed scolnick

Subject: Thank you

Dear Dr. Fauci,
I just wanted to say thank you for everything you are doing to educate us in this country, and keep us safe during this horrendous coronavirus pandemic. I can't even begin to imagine how difficult it is to maintain your composure and persevere with your focus, being constantly in the public eye and also trying to expertly guide a president who seems more preoccupied with his own image (and sound of his own voice), and political aspirations than with the actual well being of his country's citizens.
By now, it should be perfectly clear to us that we can't have a healthy economy without a healthy population.
[redacted] (b) (6)
(b) (6) We all have been diligent about staying at home [redacted] (b) (6) ordering food and other things to be delivered to our house (we all wash our hands 'religiously'). [redacted] (b) (6) is the only one of us who occasionally goes to a grocery store or drug store if necessary and then, he always wears a mask, gloves, and keeps at least six feet between himself and anyone else, and gets in and out as quickly as possible. In addition, [redacted] (b) (6) are so intent on keeping me well and alive, we haven't even, any of us, physically visited with each other, in person, inside our house for months.

In the past two months, I've been outside only four times - twice on our deck and twice in my car, dropping off a couple of shopping bags at a friend's house and at [redacted] (b) (6) group home - both times leaving the bags in the driveway, and then driving right back home.

I'm so thankful for FaceTime, but we miss hugs and kisses. I know all this must sound extreme, and it is, but I'm terrified of becoming a statistic so we're doing whatever we can to stay healthy for ourselves and one another.

[redacted] (b) (6)

[redacted] (b) (6) My family is hearing what you're saying and taking your advice.

I'm sorry this email is so long but my intention, more than anything, is to thank you for your wisdom and advice, both grounded in years of experience.

I worked at NIH for about 25 years - in the CC, in NCI, and in Human Genome. I met you once, briefly, about 40 years ago (+/-) in Bldg. 31's fitness room. I had been working in the CC, in the Patient Activities Dep't. (on the POB out- and in-patient units)at the time. I was incorrectly using a piece of equipment and you were kind enough to come over and show me the correct way to use it. I recognized you immediately, and have never forgotten that experience and how gracious you were.

I'm well aware from the news that you are up against some very tough people and some very tough times but please know you also have an army of grateful followers in this country who are completely convinced that what you are advising is in their very best interest.

Thank you again for all you've done for all of us over the years. My family and I are more grateful than I can express.

PS I read all about your wife who sounds amazing also. You two make an "All-Star" team.

Be well.

Gratefully, Joan ("Joanie") Hussey

Dear Tony:

Thank you for all you are doing. Not sure you remember me [redacted] (b) (6) we talked a lot when I was at CNN. I have not wanted to bother you but wanted to make sure you had the National Testing Action Plan that we have put together with top researchers from all the various roadmaps, etc. I joined The Rockefeller Foundation after working in Afghanistan and Pakistan with State and coerced Christy Feig to join me. We would be happy to get on a call today with Raj and Jonathan Quick and other authors like Mike Pellini and Mark McLellan and Rick Klausner.

Given our history with public health and our ability to convene, we hoped we could help by working out a consensus plan. I have been briefing Caleb McCarry at the White House. We have worked with industry to also figure out the solutions to the supply chain issues and the other logistical issues. We are going to put $10 million into helping this standup. This plan doesn't just say what we need but the steps to get it done to open more safely.

Please let me know if you would like a call.

Regards
Eileen

Subject: ASF: Today's YES Network interview

You have an interview today with Jack Curry of the YES Network (Yankees). Just last night, The NY Post ran a story that includes Jack among the many sports broadcasting stars that have come out of Fordham [redacted] (b) (6); Jack and I have talked about this). Thought you might like to see it. Parts of your interview are also going to run on Michael Kay's show, and Kay also features prominently in this piece.

How Fordham has produced a generation of sports media stars

April 19, 2020 | 4:04pm | Updated April 19, 2020 | 9:16pm

John Giannone, MIchael Kay and Mike Breen; Chris Carrino Courtesy of Michael Kay, Chris Carrino

Long before he was an electee to the Basketball Hall of Fame, Mike Breen was an intimidated 18-year-old freshman attending a workshop at Fordham's renowned college radio station, WFUV, in the fall of 1979.

Breen felt sheepish next to the juniors and seniors leading the seminar and contemplated delaying the start of his broadcasting training. Soon, a couple of upperclassmen, including future NBA writer Dave D'Alesandro, made him feel more comfortable.

But he still didn't have any friends until one day on campus he saw a confident sophomore trying to sweet talk a young woman. "I know you like me," he said. "I can see it in your eyes."

The woman responded by saying she would not date him if he were the last man on earth. She essentially was saying, "See ya" … to Michael Kay.

That is how Breen first became friends with Kay.

"For him to have the confidence to do this in front of everybody with this beautiful student, I thought, 'Man, this guy has a great sense of humor,'" Breen said.

Four decades later, Breen and Kay are still good friends.

Michael Kay and Mike Breen Courtesy of Michael Kay

Fordham, the private Jesuit university in The Bronx that launched the legendary Vin Scully, for decades has been a powerhouse sportscasting pipeline, especially in New York. And the school ties that first united Breen and Kay are webbed throughout the industry.

Fordham is the alma mater for the voice of the NBA Finals/Knicks (Breen, Class of 1983), the Yankees' lead TV play-by-player/ESPN New York afternoon radio host (Kay, '82), the voice of the Giants (Bob Papa, '86), the radio voice of the Nets (Chris Carrino, '92) MSG's John Giannone ('86), YES' Jack Curry ('86), WFAN's Paul Dottino ('86) and YES/ESPN's Ryan Ruocco ('08). And that's just New York-based sportscasters.

For good measure, the school produced CBS' Spero Dedes ('01), ESPN's Tony Reali ('00) and the Washington Nationals' Charlie Slowes ('83). There are many more, and not just in front of the camera. If you need a field producer, Jim Johnson ('86) works for ESPN. A radio engineer? WFAN's Chris Majkowski ('89) will set things up. Media relations? Louis Barricelli ('09) is leading things at MLB Network.

Like everyone else, they are all dealing with the halt of sports due to the coronavirus pandemic. It is a jarring timeout for people so used to being on the run.

Ryan Ruocco, Mike Breen Courtesy of Ryan Ruocco

Take Carrino, who has done so much to raise money and awareness for facio scapulo humeral dystrophy (FSHD), a form of muscular dystrophy that afflicts him. A fundraising event was supposed to take place in March at a Nets game at Barclays Center. His 10th annual fundraising dinner, corresponding with his 50th birthday, was slated for August, and now is in question.

“I don’t know if it is going to be safe to have people together still,” Carrino said. “Are the restrictions going to be there in terms of how many people can gather in one place? The other aspect of it for me is: How comfortable am I asking people for money when I know the economy and certain businesses are affected so badly?”

Ruocco was supposed to get married in Italy in June. He and his fiancée, Andrea Ferzoco, are now going to punt the wedding until June 2021.

“It sucks,” Ruocco said. “Andrea and I were so excited and so were our guests. We have been feeling all the joy leading us to this. There are people dealing with much more dire circumstances than rescheduling a wedding. That is kind of the perspective we have tried to take.”

While most of the successful sports media alumni are worried about the current direction of Fordham and WFUV because of a de-emphasis on sports during the pandemic, to a man they say how Fordham molded them and led them to where they are today.

They were helped by famous names such as the legendary Marty Glickman, a mentor, and Stan Fischler, who taught classes. Then there were the less famous, equally instrumental figures in the program, such as Bob Ahrens, who ran WFUV as its executive producer during many of these notable students’ formative years.

John Giannone punting at FordhamCourtesy of John Giannone

The experiences that they shared forged many of them, such as Breen and Kay, into close friends.

Giannone went to Fordham after being recruited to be a punter on the football team. During training camp his freshman year, he quickly figured out the third-string punter would never see the field. He went to Kay, then the WFUV sports director as a senior, to try to help on the station. Kay said Giannone could do stats for him during the football season.

Kay went on to work at The Post, and later helped Giannone land an entry-level position at the paper. When Giannone transferred into television at CNN/Sports Illustrated, it was through a Kay connection. And Giannone landed at MSG Network after Kay left to become the TV voice of the Yankees when YES Network began.

When it was Giannone's turn as WFUV sports director, he made Papa and Curry a play-by-player and an analyst when they were sophomores.

WFUV also got its staff access to locker rooms at places like Yankee Stadium and Madison Square Garden to learn the craft next to professionals at the highest level. That remains largely true today.

"WFUV allowed you to believe you were a professional broadcaster before you really were," Curry said. "We were in the heart of New York City, and, even if we weren't Marv Albert, we felt as if what Marv Albert was doing for the Knicks, we were doing for Fordham."

There is a lineage that unites. Carrino learned how to describe the geography of a basketball court from Glickman. Later, Carrino returned to Fordham and taught Ruocco the same lessons. These days, at some Nets games, Ruocco is on TV, sitting next to Carrino, calling the game on the radio.

Jack Curry Courtesy of Jack Curry

Papa also was mentored by Glickman. Papa and Carrino each were told by their fathers that if they majored in communications, they would have to pay for school themselves. Both ended up in the Business School, but had their eyes on WFUV the whole time.

Carrino ended up working as a producer for Papa, beginning when Papa hosted a tailgate show on WFAN. Carrino eventually followed Papa as the radio voice of the Nets.

The Fordham sports alums want everyone to be safe during this time — and they can’t wait to get back to what they love to do.

“I’m desperate to get back to work,” Breen said. “I’m hoping there is NBA basketball. This is the best time of the year.”

Subject: the Strategy document

Here is the working draft of the article for the NEJM . It , in my opinion, reads really well . I have embellished it today with a figure that conceptually outlines what we are talking about ; the old axiom that a picture is worth a thousand words .
The editorial guidelines of the NEJM has 2 potential categories . One is Perspectives which is 1200 words an 5 references . We are at 1750 words and I think losing 500 words takes away a lot from the message . The other category is a special report which is over 2500 words and allows lots of references (40) I think this is best and was one reason I thought about adding the conceptual figure which does outline in a single picture what we are talking about .

Tony , If you feel its best to have Francis on this paper we both support it . Your call . I do however lean on including Francis . I would say politicly to achieve our goal and bring all these companies into the tent while you are away at the White House having him buy into this plan through the ACTIV program seems important to us . I think we get to our goal if he is out there publicly embracing this; using the NIAID networks labs DSMB and the correlates programs . This type of granularity really puts him deep into understanding what we are doing . If this means you are first and he is last author we are ok with that , For me I need to have him use me for interfacing with the company in defining these collaborations . If you were present all the time this would be unnecessary , but as he will be the link with BARDA linking him to John and I increases the likelihood of success.

On Apr 19, 2020, at 8:48 PM, Collins, Francis (NIH/OD) [E] [redacted] (b) (6)> wrote:

Dear David et al.,

Thanks for forwarding this very thoughtful document, which presents a series of important recommendations – most of which I agree with. I don't know if you saw Friday's announcement (attached) of the new public private partnership called ACTIV (for Accelerating COVID-19 Therapeutic Interventions and Vaccines), but it has taken on most of the points you raise in sections 1 – 3 of your letter. I share your hopes that remdesivir will show benefit, and the current large NIH-sponsored RCT has completed enrollment and should reveal results in about a month. But of course we want to test multiple other interventions – both small molecules and antibody-based therapies, so we need our trial system to be optimized like never before. I will share your letter with the leaders of ACTIV, who are working with unprecedented speed to prioritize the next set of therapeutic candidates as well as pushing vaccine development programs to adopt exceptionally creative trial designs to test safety and efficacy (with full engagement by FDA).

Best regards, Francis

Subject: A proposal to stop COVID-19 and reopen our schools and businesses

Dear Francis,

I hope you are well.

I write on behalf of a group of citizen-scientists, most or all of whom you know. Motivated solely by our desire to help defeat the serious threat our nation and the world now faces, we wrote a set of four actionable, non-partisan proposals (attached) to produce safe and effective COVID-19 therapeutics and vaccines in the shortest possible timeframe, and to reopen our society in a manner that reduces the risk of future COVID-19 outbreaks.

We hope you find these ideas interesting, and might be willing to share this set of proposals with Dr. Tony Fauci, along with our willingness to discuss any part of the proposals with him if we can be helpful. We understand from our efforts to contact Dr. Fauci through email routes that his standard inbox may be too overwhelmed for our proposal to reach him.

The four proposals attached describe: (1) How to rapidly repurpose an antiviral drug to treat COVID-19 patients; (2) How to expedite the development of human antibody drugs to treat patients and to provide short-term protection for healthy individuals; (3) How to develop COVID-19 vaccines on an expedited time scale; and (4) How to reopen our businesses and schools in a manner that reduces the risk of future outbreaks and deaths.

Thank you for any help or thoughts you might be able to provide.

Sincerely yours,
Ben Cravatt (Scripps), Lynn Goldman (GWU), Akiko Iwasaki (Yale), Scott Kemp (MIT), Michael Lin (Stanford), David Liu (Harvard/Broad), Michael Rosbash (Brandeis), Stuart Schreiber (Harvard/Broad), Ed Scolnick (Broad), Jonathan Simons (PCF), and Ramnik Xavier (MGH/Broad)

Patty I had spoken to ASF about using a few slides and he said yes / I will have them done short;y

- V Dzau: I will begin the session by providing brief (~3 min) opening remarks describing the circumstances of the pandemic. Then, I will introduce the panelists and you will each have 7 minutes to provide remarks. You may use a limited number of slides for illustration. I hope that each panelist will provide their own perspective and speak to the issues proposed below.
- Jeremy Farrar will discuss the global response to the pandemic, drawing from his experience as a global leader, the chair of the Scientific Advisory Group for the WHO's R&D Blueprint and as a member of the Global Preparedness Monitoring Board.

- Tony Fauci will discuss the US pandemic and provide his perspective as a member of the White House Coronavirus Task Force addressing the 2019–20 coronavirus pandemic.
- George Gao will discuss China's response to the pandemic and lessons learned for the rest of the globe.
- Susan Weiss will discuss the viral characteristics of SARS COV2 , insights into its pathobiology, immunity and development of a pan-CoV antiviral.
- Richard Hatchett will discuss the development of new vaccines and treatments against COVID-19.
- Sanjay Gupta will comment on the health system response to the pandemic and challenges related to communication and public engagement in responding to COVID-19.

We need to discuss tomorrow on our daily meeting/call – do you want to do slides.

Again this event is on a Saturday and is tentative as we do not know when the TF meeting will be scheduled that day.

So – if you can do it - will you use slides?

So if you cant do this – do you want a surrogate and who?

I will make sure David is on board for zoom.

Subject: IMPORTANT

Dear Patty,

I hope this finds you well. I know how terribly busy Tony is and I hate to trouble him, however, the NAS Annual Meeting panel on COVID-19 is less than a week away and my team needs answers to the questions below. Can you call this to his attention or assist him in providing the signed form and requested information? We hope to have this by Tuesday (4/23) morning, if possible.

- Please provide a **cell number** where you can be reached in case you do not connect in time (if you prefer, you can provide the number of your assistant if they will be able to reach you directly by cell or at home).

- Will you have slides to display during your talk?

- Are you able to use Zoom 'share your screen' to show the slides directly during your talk or do you need someone from NAS to show your slides for you?

- Will you need a test session with our Zoom techs? Please let me know as soon as possible as staff are available to hold training sessions through Monday, April 20 (9 AM to 5 PM EDT).

- If you would like to promote your participation in our meeting on social media, please let me know the contact of your social media contact from your institution.

Finally, because this is going to be a remote meeting, we would like panelists to log into Zoom 30 minutes before the session starts – that is at 1:30 pm ET to go over the technology and any last minute speaker prep. So far, more than 800 Academy members have registered for the meeting and there will be additional members of the public and possibly the press tuning in.

Best,
Victor

Importance: High

Tony (cc'ing David so that you might pass this on to Tony once he has a spare second)

As the PI of the R01 grant publicly targeted by Fox News reporters at the Presidential press briefing last night, I just wanted to say a personal thankyou on behalf of our staff and collaborators, for publicly standing up and stating that the scientific evidence supports a natural origin for COVID-19 from a bat-to-human spillover, not a lab release from the Wuhan Institute of Virology.

[redacted] (b) (7)(A)

From my perspective, your comments are brave, and coming from your trusted voice, will help dispel the myths being spun around the virus' origins.

Once this pandemic's over I look forward thanking you in person and let you know how important your comments are to us all.

Cheers,

Peter

> ## Coronavirus (COVID-19) Update: FDA, Gates Foundation, UnitedHealth Group, Quantigen, and U.S. Cotton Collaborate to Address Testing Supply Needs

The U.S. Food and Drug Administration announced a further expansion of COVID-19 testing options through the recognition that spun synthetic swabs – with a design similar to Q-tips – could be used to test patients by collecting a sample from the front of the nose.

As part of this effort, U.S. Cotton, the largest manufacturer of cotton swabs and a subsidiary of Parkdale-Mills, developed a polyester-based Q-tip-type swab that is fully synthetic for compatibility with COVID-19 testing. Harnessing its large-scale U.S.-based manufacturing capabilities, U.S. Cotton plans to produce these new polyester swabs in large quantities to help meet the needs for coronavirus diagnostic testing.

"This action today demonstrates the ingenuity that results from the FDA working in partnership with the private sector. The Trump Administration has been working side-by-side with our industry partners to fight this pandemic, and today is a great example of that work. We appreciate work by UnitedHealth Group, Quantigen, and the Gates Foundation to perform and support the clinical studies necessary for this advancement. We also want to acknowledge U.S. Cotton's efforts to manufacture a new type of swab for COVID-19 testing that can be produced at scale. We appreciate the work of these collaborators to consider how these test supplies could be broadly distributed to meet not only the testing needs of the United States but also global needs around the pandemic. All of these actions by these American organizations will help continue to expand our testing capability," said FDA Commissioner Stephen M. Hahn, M.D.

This finding that spun synthetic swabs could be used for COVID-19 testing is based on results from a clinical investigation that represents a collaboration between the FDA, UnitedHealth Group, the Gates Foundation, and Quantigen. The type of testing at the front of the nose used in this study is notable because it allows self-collection by patients thereby limiting exposure of healthcare providers; it is more comfortable for patients and it can be performed by a swab that is more readily available and manufacturable at scale.

Subject: You are a Hero

Dear Dr. Fauci,

Thank you for everything you're doing for America and the world. I'm writing to you today, rather than calling, because it's impossible to imagine the degree to which leading science during this COVID-19 pandemic is impacting your life and your family. Please know, that your wisdom and passion brings so much comfort to millions, including our family and me, specifically. You may recall from our previous talks, that [redacted] (b) (6) What a vicious virus, Dr. Fauci ... unlike anything I've ever seen.

In addition to my work as Ambassador for the Elizabeth Taylor AIDS Foundation, it is also an honor and responsibility to serve as International Youth Chair for the National Pediatric Cancer Foundation. In that position, people approach with questions for our government that I am uncomfortable giving opinions on in ignorance. So reluctant to bother you - I'm seeking to learn who at the NIH I should bring this to?

The question comes from my associate [redacted] (b) (6), (b) (4)

[redacted] (b) (4)

Thank you so much for all that you do.

Always,

Kathy

Subject: ASF: From Jack Curry/ YES Network (Yankees)

Jack Curry (broadcaster with the YES Network, which is like MASN, but for the Yankees) is appealing to you as a New Yorker and lifelong Yankees fan for a 10-minute interview via Zoom. Jack covered the Yankees for 22 years at the NYT. The interview would run on YES (largest regional sports network in the country) as the focus of one of the original shows they are producing 3x/week called "YES, WE'RE HERE." It would be run across all of their social media platforms (reach of over 1M). They would also air clips on the Michael Kay Radio Show (TV play-by-play announcer for the Yankees), which is simulcast on YES and is the highest-rated drive time talk show in New York.

Questions below, including a few at the end about your lifelong baseball fandom. Is this something you'd be willing to do? If so we will seek clearance.

POSSIBLE QUESTIONS

DOCTOR FAUCI, I KNOW YOUR DAYS ARE FILLED WITH OFFERING ADVICE AND COUNSEL TO SO MANY PEOPLE ABOUT THE CORONAVIRUS. WITH THE SOBERING POSITION WE HAVE BEEN IN FOR A WHILE, WHAT WOULD BE YOUR MOST URGENT MESSAGE TO AMERICANS?

THE PHRASE 'FLATTENING THE CURVE' HAS BECOME COMMONPLACE IN OUR VERNACULAR IN RECENT WEEKS. HOW MUCH CLOSER ARE WE GETTING TO FLATTENING THE CURVE?

YOU'VE SAID SEVERAL TIMES THAT THE VIRUS IS THE CLOCK. WHAT IS THE VIRUS TELLING YOU ABOUT THAT TIME FRAME?

AS THE COUNTRY TRIES TO WORK ITS WAY BACK, THERE HAS BEEN SPECULATION ABOUT HOW PROFESSIONAL SPORTS CAN RETURN. WHAT ARE YOUR THOUGHTS ON HOW, FOR INSTANCE, MAJOR LEAGUE BASEBALL WOULD BE ABLE TO START ITS SEASON?

BASEBALL IS A SPORT IN WHICH SHAKING HANDS IS AS COMMON AS BALLS AND STRIKES. NOT JUST IN BASEBALL, OBVIOUSLY, BUT IN LIFE OVERALL, HOW MUCH DO YOU ADVOCATE NOT SHAKING HANDS ANYMORE?

THE NEW YORK TIMES REFERRED TO YOU AS THE EXPLAINER-IN-CHIEF IN COMPLIMENTING YOUR ABILITY TO SPEAK BLUNTLY AND TRUTHFULLY. SO HOW SHOULD AMERICANS PLAN ON BEHAVING AS WE MOVE FORWARD IN THESE UNCERTAIN TIMES?

AND…IF DR FAUCI WAS COMFORTABLE WITH IT, A COUPLE OF QUESTIONS ABOUT HIS BASEBALL FANDOM…

WITH ALL THAT'S HAPPENING AROUND US AND YOUR IMPORTANT ROLE IN IT, IT MIGHT SEEM TRITE TO DISCUSS BASEBALL. BUT I KNOW YOU'VE BEEN A YANKEE FAN FOR MORE THAN 70 YEARS. AND I WOULD LIKE TO ASK YOU A FEW BASEBALL QUESTIONS.

WHEN AND HOW DID YOUR YANKEE FANDOM BEGIN?

YOU WERE A YOUNGSTER WHEN THE YANKEES WON 5 STRAIGHT WORLD SERIES TITLES FROM 1949-1953, THE ONLY TIME THAT'S EVER HAPPENED IN BASEBALL HISTORY. WHAT ARE YOUR MEMORIES OF THOSE YEARS?

HOW HAS YOUR BACKGROUND IN SPORTS HELPED YOU IN YOUR ROLE WITH THE NIAID?

AND, FINALLY, YOU'VE SPOKEN ABOUT HOW NEW YORK IS THE EPICENTER OF THE VIRUS. FOR NEW YORKERS WHO ARE LOOKING FOR SOME LIGHT AT THE END OF THE TUNNEL, WHAT WOULD YOU SAY TO THEM?

Subject: The global health leaders call, THURSDAY 30 April at 14.30 CET

Dear colleagues,

Dr Tedros would like to invite you to the next informal discussion about the ongoing 2019 novel coronavirus.

The teleconference will be hosted on THURSDAY, 30 April at 14:30 CET and Zoom details are copied below.

If you experience any technical difficulties joining this conference call, please contact the WHO HQ EOC operator at: +41227915533

It would be appreciated if you could kindly confirm your participation to Ms Sophia Kabir, email (b) (6); mobile no. (b) (6)

The agenda and background documents will be shared ahead of the call.

Best,

Mike

Subject: RE: COVID-19 vaccine

Adrian:

Thank you for you note. Sorry that I took a few days to get back to you, but I have been swamped. It is good to know of your work on the chimpanzee adenoviral vectors. The biosafety classification of viral vectors in the U.S. is within the purview of the CDC, and so I have copied CDC Director Bob Redfield on this e-mail. He would be able to point you in the right direction.

Best regards,
Tony

Hi Dr. Fauci,

Jon Yewdell suggested I contact you directly to expedite a briefing on the new county-level models that our center, PolicyLab, at CHOP, will be releasing tomorrow. He shared with us your note below about including Ambassador Birx and Bob Redfield as well. We'd be happy to do so, and had been in touch with Ambassador Birx last week. We have also stayed in contact with the analytics team led by Irum Zaidi and Chuck Vitek. I am also tasked to Governor Wolf's crisis team in Pennsylvania and shared the data with the Governor today.

Let us know next steps for arranging a video conference. Will arrange our schedule at your convenience. Will have Drs. Paul Offit, Greg Tasian, and Jing Huang join from our team.

Best,

Dave

Subject: FW: Heads up from Paul Offit and David Rubin on policy memorandum to reopen economy

Hi Jon,

Paul forwarded me your email back to him. Our team would be happy to present to him, Ambassador Birx, and Bob Redfield. We have shared the models with Governor Wolf in Pennsylvania today, and they are informing strategy here. The 260 county models will post to our PolicyLab website tomorrow. Of note, Paul and I had spoken to Ambassador Birx in the last couple of weeks, and we have been in contact with Irum Zaidi, Chuck Vitek, and the analytics team.

Let us know how would be best to set up a group webinar to present the information. Or feel free to connect us directly with their schedulers. Think the models illustrate the low margin of error in the large cities for resurgence risk, even as other less densely populated counties may be tolerant to reopening strategies.

Tony,

Paul and David asked me to pass this on to you.

Forwarded message from David:

"I think the time has come, with our models on 260 counties across the country releasing in the next 48 hours, to offer Tony Fauci, and potentially other task force members, a preview of the work. Our models have incorporated local area differences due to weather, population and social distancing. They reveal that the large, densely populated cities will struggle to re-open, and are not well aided by weather effects given their density. However, in less densely populated areas, in which case counts are lower, weather has been a mitigating factor. These latter counties may have better success when they re-open assuming they are smart about workplace safety and have testing and surveillance strategies in place"

Subject: Update: Inhibit cytokine storm in COVID-19 patients by Proteasome Inhibitors
Importance: High

Dear Dr. Fauci,
dear Dr. Coomes,

thank you for your reply from 13. April with the notice that the information has been shared with NIAID's COVID-19 research team.

Has the project already been initially evaluated by the team?

Are there any questions or need for additional information?

- I have summed up the relevant data regarding the use of proteasome inhibitors for treatment of COVID-19 patients with acute lung and systemic organ failure in a position paper, please find a Preview draft attached.

- With regard to currently ongoing trials with monoclonal antibodies against the IL-6 receptor, i.e. tocilizumab or sarilumab: These approaches go into the same direction as the present suggestion, however, inhibition of NF-κB by proteasome inhibitors could provide the unique potential to inhibit the release of multiple cytokines simultaneously, in particular strongly pro-inflammatory cytokines including IL-1, IL-6, TNFα and chemokines, such as MIP-1 and CXCL1.

- This simultaneous inhibition of multiple cytokines/chemokine seems to be advantegeaus compared to single target approaches (as with the mAb) to compensate for redundant and synergistic effects of multiple cytokines released during highly pathogenic CoV or H5N1 infection.

Looking forward to hearing from you.

Kind regards,

Ralf

Inhibition of cytokine storm in COVID-19 patients with acute respiratory distress syndrom by PROTEASOME INHIBITORS e.g. Velcade (Bortezomib)

Dear Dr. Fauci,
dear Madams/Sirs,
I want to bring to your attension some potentially important experimental data and a new proposal for treatment of COVID-19 patients with acute respiratory distress syndrome and organ failure. Sorry for the broad distribution but I wanted to make sure that my message reaches you.

Similarly as has been described earlier for SARS-CoV, MERS-CoV (Channappanavar & Perlman, 2017), H5N1 and some heavy H1N1 Influenza A infections, also COVID-19 patients have been reported to show significantly increased systemic cytokine release (i.e. cytokine storm), particularly those patients with lung failure or systemic organ failure (***Chaolin Huang et al. Lancet vol 395, 2020, ref 1***).

Previous studies at **Virologik GmbH, Erlangen, Germany,** in colaboration with the **Friedrich-Loeffler-Institut, Tuebingen, Germany** have shown, that H5N1 (or alternatively LPS) -induced **Cytokine storm *in vivo* can be inhibited by application of Proteasome Inhibitors** (***E. Haasbach et al, Antiviral Res. 91, 2011, ref. 2***), via **the inhibition of translocation of the NF-κB transcription factor** to the nucleus (see ***Fig. below***). The mechanism of NF-κB inhibition by proteasome inhibitors is well described, and works via the inhibition of the proteasomal degradation of the cytosolic inhibitor IκB, this way keeping NF-κB bound in the cytosol and thereby inhibiting the otherwise induced (by cytokine or LPS- or RNA virus) translocation of NF-κB to the nucleus where it would initiate the transcription of many cytokines. This effect of proteasome inhibitors seems to work in most cell types, we could demonstrate this effect in several different cell types (including macrophages) after stimulation with TNFa in vitro and in H5N1 (or LPS) treated mice in vivo (see manuscript and Figs. attached).

Inhibition of NF-κB by proteasome inhibitors provides the unique potential to inhibit the release of many cytokines simultaneously, in particular strongly proinflammatory cytokines **IL-1α, IL-6, TNFα, MIP-1β...)** (whereas some other cytokines involved in antiviral immune response, such as IFNγ probably seem to be not/less affected (because of different transcription pathway).

Importantly, beside the **anti-inflammatory activity**, proteasome inhibitors showed also **significant anti-fibrotic activity** (Lueftenegger et al., manuscript and figs attached), which may be also important in the treatment of COVID-19 patients with heavy lung disease.

Furthermore, there have been several publications showing that **in particular early phases of the replication cycle of Corona virus seem to be dependent on interaction with the ubiquitin-proteasomal system (UPS) of the host cell**, and were effectively inhibited by **selective 20S proteasome inhibitors (such as Velcade)** ***(Wang et al. Virology J 2010, 7:99 (ref. 3); M. Raaben et al. J. Virology, 84(15), 2010, ref. 4).***
There are several registered **proteasome inhibitors (Bortezomib (Velcade®)** e.g. produced by **Millennium Pharmaceuticals** (i.e Takeda Oncology); **Carfilzomib (Kyprolis®), Ixazomib (Ninlaro®))** for treatment of multiple myeloma and Mantel cell lymphoma, *i.e.* there are registered drugs with well known side effects available to be tested in small clinical studies for evaluation of their therapeutic efficacy in COVID-19 patients with heavy lung disease and other organ failure. ***Noteworthy***: in contrast to the chronical oncological indications where up to 8 treatment cycles (and sometimes even more) are applied, it seems plausible that just one or two treatment cycles of proteasome inhibitors might be sufficient to downregulate the cytokine storm in COVID-19 patients, which would be associated also with much lower side effects.

Early first experience on efficacy could be gained from compassionate use applications in heavily ill COVID-19 patients very quickly. Beside the registered application forms , i.e. infusions, probably also inhalative application should be tested as well, because it may be better suited to reach the respective target cells in the lung, i.e. alveolar epithelial cell and alveolar macrophages. There are multiple inhalative devices available, e.g. the Handyhaler by Boehringer Ingelheim used for Spiriva (for COPD treatment).

Although there are still many open questions, the potential to control the cytokine storm-induced heavy lung and other organ failure by using already registered drugs, ie. proteasome inhibitors may be a real chance to get an additional treatment option, hopefully decreasing the cases necessary for artificial aeration.

Please forward this mail to the colleages you consider relevant for evaluation, discussion and consideration for your clinical strategy for COVID-19.

Please let me know if additional informations are necessary.

To my person: I have MD PhD degree and have many years experience in pharmaceutical development (Boehringer Ingelheim), Biotech (Igeneon, Aphton, Virologik GmbH) (for reference see also PubMed Kircheis r) currently leading R&D activities at Syntacoll (part of Innocoll). I am providing this information personally in order to help to find a treatment for COVID-19 patients.

Looking forward to getting feedback from you,

With kind regards,

Ralf Kircheis (MD PhD)

Antiviral activity of the proteasome inhibitor VL-01 against influenza A viruses.

Haasbach E[1], Pauli EK, Spranger R, Mitzner D, Schubert U, Kircheis R, Planz O.
Author information

Abstract

The appearance of highly pathogenic avian influenza A viruses of the H5N1 subtype being able to infect humans and the 2009 H1N1 pandemic reveals the urgent need for new and efficient countermeasures against these viruses. The long-term efficacy of current antivirals is often limited, because of the emergence of drug-resistant virus mutants. A growing understanding of the virus-host interaction raises the possibility to explore alternative targets involved in the viral replication. In the present study we show that the proteasome inhibitor VL-01 leads to reduction of influenza virus replication in human lung adenocarcinoma epithelial cells (A549) as demonstrated with three different influenza virus strains, A/Puerto Rico/8/34 (H1N1) (EC50 value of 1.7 µM), A/Regensburg/D6/09 (H1N1v) (EC50 value of 2.4 µM) and A/Mallard/Bavaria/1/2006 (H5N1) (EC50 value of 0.8 µM). In in vivo experiments we could demonstrate that VL-01-aerosol-treatment of BALB/c mice with 14.1 mg/kg results in no toxic side effects, reduced progeny virus titers in the lung (1.1 ± 0.3 log10 pfu) and enhanced survival of mice after infection with a 5-fold MLD50 of the human influenza A virus strain A/Puerto Rico/8/34 (H1N1) up to 50%. Furthermore, treatment of mice with

VL-01 reduced the cytokine release of IL-α/β, IL-6, MIP-1β, RANTES and TNF-α induced by LPS or highly pathogen avian H5N1 influenza A virus. The present data demonstrates an antiviral effect of VL-01 in vitro and in vivo and the ability to reduce influenza virus induced cytokines and chemokines.

Subject: Keynote Speaker- Keystone Vaccinology eSymposia (directions to record & upload talk)

Greetings Dr. Fauci:

Thank you for agreeing to participate as the keynote speaker for the Keystone eSymposia: **Vaccinology in the Age of Pandemics: Strategies Against COVID-19 & Other Global Threats**, a virtual conference which will be held on, **Monday, June 15 and Tuesday, June 16, 2020**.

Understanding how busy you are right now, we would like to make this process as easy as possible. We are hoping to receive pre-recorded talks by Monday, May 18. Please keep us apprised on your timeline and we will work with your schedule. Here are the details on next steps.

Next Steps:

- **Keynote Talk Title:** Transforming Vaccinology: COVID-19 Emergency and Considerations for the Next Decade
    - **Please review your talk title and return any changes.** Changes can be made up to two-weeks prior to the event.

- **Please follow this link to upload your talk recording, by Monday, May 18.** Click here to learn more about recording your presentation. Our media team can assist you with recording on your personal computer.
    - Similar to the face-to-face conference, we envision approximately 50-60 minutes for the keynote lecture.

For questions about the scientific programming of this meeting, please contact Dr. Rappuoli at rino.r.rappuoli@gsk.com and I will serve as the administrative/logistics contact at KristinaH@KeystoneSymposia.Org.

Best,
Kristina

Subject: Thank you, and...

Dear Tony,

I have always felt reassured when the good Dr. Fauci speaks, and now more than ever. As an American, a former colleague, a long-time admirer and student of your wisdom – thank you. We are all safer because of you, and the world will be a better place because of you. Again.

As you know, I am now leading the ONE Campaign. We've been quite active with the ONEWorld Campaign, dedicated to the fight against this newest virus, and focused on Africa. We've made some progress on debt, and next up is a focus on ensuring that a vaccine, when it comes, is available to everyone.

One of the things we want to do is educate people, in all of the places we work. It won't surprise you that of particular urgency amongst our partners in Africa is that facts and information get to people across the continent, but we also know that more facts are needed everywhere. So next month we are going to launch #PassTheMic, where every day for 19 days we will ask a celebrity to turn his or her social media channels over to an expert on COVID-19 for one day. So Julia Roberts might turn her Twitter account to you to talk about the critical elements needed to flatten the curve and slow the spread. Or Idris Elba could give up his Instagram to the head of the African CDC so that he can illustrate the impact COVID-19 will have across Africa and what that means for the rest of the world.

We know artists want to be helpful right now, but that it is hard to know what to do. And we know there are experts like you out there who have the answers. We've thought about this a lot at ONE and wanted to do something we felt would truly have an impact. As we look ahead we know COVID-19 does not know borders and until it is beaten everywhere we are not in the clear. We need a global response plan and we need it now. By turning over their platforms for the day, celebrity influencers will be donating one of their biggest assets – their followers – to YOU, giving you the platform you need (and we all need) to tell the world why a global response is critical. Because none of us are safe until all of us are safe.

We will work with each expert/celebrity pair to personalize the content to our and our celebrity partners' audiences – in North America, Europe and Africa, and help create content that both parties are happy with. We are now confirming our talent partners, and so far are getting a terrific response.

We know you're a busy man, so we've planned it so that the amount of time on your end would be minimal. But the impact would be maximal.

I'm attaching more information about the campaign. Please let me know what you think and if you have questions. Ideally we would like to get this off the ground in early May, so are hoping to confirm folks by April 28th at the latest. Our team will be in touch with your office to follow up.

Thanks as always for everything you do. All my best to you, Gayle

Subject: Greetings

Dear Tony:

.

It's been a long time. Honestly, I can't remember when we last saw each other. I recall that wonderful day we went to the Nats game together, although I cannot remember who else came with us. And of course I will always remember when you came to my Partners in Health fundraiser and introduced Paul Farmer. I will never forget your speech (and neither will Paul!). Once [redacted] (b) (6) I apologize for dropping out of touch.

Those events were so many years ago, (b) (6) no? So much has happened and changed since then, and now, seeing you and listening to your wise words and advice every day, I am reminded that we need to reconnect, when it's safe and you have time. We have so much to catch up on! I have been meaning to write to you or call you, but I had misplaced your email address and phone numbers. I hope this address works and this message reaches you.

Meantime, thank you for your service to our country, indeed the world. You have been a solid, wise, steady voice, Tony, and, despite all the naysayers and fools on social media, you have earned the respect of billions of people. I am very proud of you, and am humbled and honored that I can call you my friend.

I hope you and your family are well, and staying safe. The Broas family is doing well, thanks in no small part to your daily advice and objective analysis. Thank you! Please let me know if there is anything I can do for you or your family.

Looking forward to seeing you on the other side of this, and having a good catch up. Who knows, maybe at a Nats game?

Best regards,

Tim

Subject: Washington Post story re: Sammies finalists

Hello Tony,

Congratulations on being a Career Achievement finalist for the Samuel J. Heyman Service to America Medals (Sammies). I'm writing a Federal Insider column about the finalists and would like arrange a telephone interview with your for the story.

My questions include:
Why did you join the federal service?
Is there one example or anecdote that makes you particularly proud of you work?
What do you like most about your job?
What do you like least about your job?
Why would you recommend, or not, your agency and/or the federal government to those seeking career advice?

I know this is an incredibly busy time for you. I appreciate that the life and death issues related to the coronavirus are more important than any award. Nonetheless, I hope you can spare 10 or 15 minutes for a telephone interview on Tuesday or Wednesday, April 28 or 29. I can also make other days that week work.

Thank you.

Best,
Joe

Subject: Keynote Speaker- Keystone Vaccinology eSymposia (directions to record & upload talk)

Greetings Dr. Fauci:

Thank you for agreeing to participate as the keynote speaker for the Keystone eSymposia: **Vaccinology in the Age of Pandemics: Strategies Against COVID-19 & Other Global Threats**, a virtual conference which will be held on, **Monday, June 15 and Tuesday, June 16, 2020**.

Understanding how busy you are right now, we would like to make this process as easy as possible. We are hoping to receive pre-recorded talks by Monday, May 18. Please keep us apprised on your timeline and we will work with your schedule. Here are the details on next steps.

Next Steps:

- **Keynote Talk Title:** Transforming Vaccinology: COVID-19 Emergency and Considerations for the Next Decade
    - **Please review your talk title and return any changes.** Changes can be made up to two-weeks prior to the event.

- **Please follow this link to upload your talk recording, by Monday, May 18.** Click here to learn more about recording your presentation. Our media team can assist you with recording on your personal computer.
    - Similar to the face-to-face conference, we envision approximately 50-60 minutes for the keynote lecture.

For questions about the scientific programming of this meeting, please contact Dr. Rappuoli at rino.r.rappuoli@gsk.com and I will serve as the administrative/logistics contact at KristinaH@KeystoneSymposia.Org.

Best,
Kristina

Dinah and Ned,

It was a pleasure talking to you about what you are considering. As we discussed, here is the NIAID Strategic Plan that was just published, and two models of funding opportunity announcements for you to consider as models. I also think the Cancer Centers have aspects of collaboration, shared facilities, and research focus that you can borrow. So much of what NIAID has built is modeled on the Cancer Centers.

NIAID strategic plan for COVID-19
https://www.niaid.nih.gov/sites/default/files/NIAID-COVID-19-Strategic-Plan-2020.pdf

Current Centers for AIDS Research FOA
https://grants.nih.gov/grants/guide/pa-files/par-20-106.html

This is a very old RFA. I am sending it because it was NIAID's first attempt to build research capacity for the Level 3 and Level 4 pathogens after the Anthrax events. The current versions of the RFAs have been limited competitions and are a less relavant.

Subject: RE: Interview

Hi Jennifer et al: Here are a few questions for Dr. Fauci.

Scientists from the University of Bristol found that the coronavirus has unexpected tendency to large mutations in the spike protein when its grown in monkey cells. This had been seen before as a virus that was unwilling to mutate. Does this create any concerns about vaccine design and effectiveness?

It now appears that some people who recover from Covid have no antibodies to the SARS-Cov2. What are the possible explanations for this? Has it occurred in other viral diseases? Does it have any implications for the effectiveness of vaccines? Is NIAID investigating this? Is there a possibility that the virus sequesters in cells?

Another feature of coronaviruses appears to be rapidly waning immunity. Has this been seen in any NIAID experiments? What does this suggest about the virus's ability to evade the immune system?

A laboratory at Oxford has suggested that, if all goes well, they may be finished with phase 3 trials in 5000 people by the fall, which could mean as early as September. Does that sound realistic to you?

Some companies are asking regulators to make sure that safety standards are upheld for makers of Covid vaccines, and that corners aren't cut. Is it worth cutting some safety corners to get a Covid vaccine ready for distribution?

How many people should the Moderna vaccine be tested in in phase 3? How long would you expect those trials to take?

Thanks very much, hope we can set this up soon. All best, JL +44 2035 251028

Dear Ms. Kimberly Marie Barasch

I hope you are well despite the current devastating world pandemic.

The **Bolivian Society of Intensive Care** together with the **Bolivian Healthcare Ministry** are writing the national guidelines for the management of COVID-19 in the critically ill patient, an issue that is an emergency worldwide and may become **disastrous** in the low-middle income countries of Latin America if not managed since the beginning with precise, accurate and uniform approaches.

With our team in Erasme University Hospital in Brussels, Belgium, together with Professors **Jean - Louis Vincent, Fabio Taccone, Jean Charles Preiser, Jacques Creteur**, etc., we are preparing the material with other Bolivian and Mexican intensivists, internists, infectologists, imagenologists.

I wonder if Dr. Anthony Fauci would honor us coauthoring and reviewing our last version of some chapters of our guidelines.

Best regards,

AAQC

Dear Tony,

we are all witnessing the great effort your collaborators and yourself are investing over this pandemic emergency.

As you well know, in Europe and Italy we had the unfortunate privilege of having been first hit hard by the pandemic, after China.

We had the opportunity of meta-analyzing data from 170.000 patients in European countries, for associated determinants of the spreading force of COVID-19.

If this may provide a useful, albeit non gratifying, contribution for the US and other countries, we would feel we had done our job.

best wishes

Saverio

Subject: Covid 19 Double Mechanism. By Dr Brogna Carlo

Dear Dr A. Faucy,

we don't know each other. I was born [redacted] (b) (6) I am a simple doctor in Medicin and live in a remote Italian region. I am no one. I trust in God that you can read my paper, being published. I send it to you to anticipate the exit times because I trust that we can really understand what Covid 19 is. Being nobody, I did what nobody would have done. I used the few tools I had available and questioned all the papers and data published so far. I describe what the dual mechanism of the Covid-19 can be. I anticipate that the result conclusioni is not to my credit but I have been helped. I wish you a good read. May God bless us.

Sincerely with love,

Dr. Carlo Brogna M.D.

Subject: impact of baricitinib in COVID-19-an off label study CONFIDENTIAL

dear dr Fauci, good morning. I hope you are fine.

Apologies to disturb you but it may be of your interest. I saw in the web that you (NIAID/Fauci)(https://investor.lilly.com/news-releases/news-release-details/lilly-begins-clinical-testing-therapies-covid-19) will be support a trial using Baricitinib as part of the ACTT trial...

I collaborated with Fabrizio Cantini (he reads in cc), a reumathologist of Prato to write a letter to J Infection (pdf attached). He conducted an off- label study in patients with mild-moderate pneumonia with COVID-19 [(SpO2) >92% at room-air, and ratio arterial oxygen partial pressure/fractional inspired oxygen (PaO2/FiO2) 100-300 mmHg] to evaluate the impact of baritinib (tablet 4 mg/day) in terms of safety, clinical respiratory improvements , discharge, ICU transfer in 2 weeks; these patients received also lopinavir/ritonavir therapy. The last consecutive patients with moderate COVID-19 pneumonia receiving standard of care therapy (lopinavir/ritonavir and hydroxychloroquine) admitted before the date of the first baricitinib-treated patient served as controls.

The results of this off-label study, with the limit of not been a RCT, are encouraging:

1. Safety: only 1/12 case of transaminase elevation at day 10, likely due to lopinavir ritonavir co-administration because baricitinib is mainly renal secreted
2. Respiratory improvement: SpO2 and ratio arterial oxygen partial pressure/fractional inspired oxygen (PaO2/FiO2) significantly improved;
3. Discharge in 7/12 vs 1/12
4. ICU transfer (0/12 vs 4/12)

I do hope it may be a useful, although I am aware that it is a very preliminary info for you.

Thank you for your attention.

All the best
Delia

Subject: all my gratitude and an update

dear dr Fauci, apologies to write you in these busy days. It is only to express **all my gratitude** for what you have done in your life to fight infectious diseases and what you are doing now for COVID-19. **Your efforts and achievement are in front of the whole world** and for me it is a great honor to have been with you in 1992-1996 at the time of HIV fight. As I told you many times, **you are a model of excellence**!

Only to keep you updated in my life, I am fine, and I mainly work as an ID specialist and scientist at the same place in Rome, the National Institute for Infectious Diseases L. Spallanzani. I am doing 2 days a week outpatients TB clinic and I run a small laboratory on TB research. However, given the pandemia, I shifted the lab activities on COVID-19, in particular on:

1. the role of coinfection (COVID-19 coinfection with tuberculosis, or COVID-19 coinfection with HIV) on the modulation of the in vitro immune specific-response to SARS-CoV-2, or M. tuberculosis or HIV in cells from COVID-19 patients at different clinical stage

2. in vitro evaluation of the immunological and virological effect of baricinib, an anti-JAK1 and –JAK2 drugs, used in reumathoid arthritis, that has shown using BenevolentAI's proprietary artificial intelligence-derived knowledge graph, as an agent that reduces the SARS-CoV-2 endocytosis into target cells potentially inhibiting the entry.

Moreover, I **would be happy to contribute in any activity you may think I am useful.**

I wish you a happy Easter in this blessed day.

Thank you for your attention and for **having had the possibility of working with you that has been crucial in my personal and professional life.**

All the best
Delia

I see the NIH treatment guidelines news release is out. Are you still interested in hosting a COCA call on these guidelines?

Subject: FW: Expert U.S. panel develops NIH treatment guidelines for COVID-19

Just out, press release from NIH:

Expert U.S. panel develops NIH treatment guidelines for COVID-19

04/21/2020 11:30 AM EDT

"Living document" expected to be updated often as new clinical data accrue.

Expert U.S. panel develops NIH treatment guidelines for COVID-19

"Living document" expected to be updated often as new clinical data accrue.

Colorized scanning electron micrograph of an apoptotic cell (green) infected with SARS-COV-2 virus particles (orange), isolated from a patient sample. Image captured at the NIAID Integrated Research Facility (IRF) in Fort Detrick, Maryland.*NIAID*

A panel of U.S. physicians, statisticians, and other experts has developed treatment guidelines for coronavirus disease 2019 (COVID-19). These guidelines, intended for healthcare providers, are based on published and preliminary data and the clinical expertise of the panelists, many of whom are frontline clinicians caring for patients during the rapidly evolving pandemic. The guidelines are posted online (covid19treatmentguidelines.nih.gov) and will be updated often as new data are published in peer-reviewed scientific literature and other authoritative information emerges.

The guidelines consider two broad categories of therapies currently in use by healthcare providers for COVID-19: antivirals, which may target the coronavirus directly, and host modifiers and immune-based therapies, which may influence the immune response to the virus or target the virus.

The panel's conclusions about treating COVID-19 with various agents that fall into these two classes of therapies are distilled in summary recommendations. Subsequently, the document provides background information about each agent—such as clinical data about its use, ongoing clinical trials, and known interactions with other drugs—that forms the basis for the Recommendation. Tables briefly outline the same information.

The guidelines also describe the evaluation and stratification of patients based on their risk of infection and severity of illness. Recommendations in this section address best practices for managing patients at different stages of infection, for example:

- Outpatients who are either asymptomatic or who have mild to moderate symptoms and are self-isolating
- Inpatients with severe illness or critical disease

Special considerations for pregnant women and for children who are infected are also included.

A comprehensive section of the guidelines addresses a range of considerations for clinicians caring for the most critically ill hospitalized patients. This section includes multiple recommendations for patients needing critical care, including infection control procedures, hemodynamic and ventilatory support, and drug therapy.

Finally, the guidelines include recommendations concerning the use of concomitant medications. These include statins; corticosteroids; non-steroidal anti-inflammatory drugs; and certain drugs used to control hypertension, known as ACE inhibitors and ARBs.

The treatment guidelines panel is co-chaired by Roy M. Gulick, M.D., chief of the Infectious Disease Division at Weill Medical Hospital of Cornell University, New York City; H. Clifford Lane, M.D., clinical director of the National Institute of Allergy and Infectious Diseases, National Institutes of Health; and Henry Masur, M.D., chief of the Critical Care Medicine Department at the NIH Clinical Center. Members of the guidelines panel, appointed by the co-chairs, were chosen based on their clinical experience and expertise in patient management, translational and clinical science, and/or the development of treatment guidelines. They include 30 experts drawn from U.S. healthcare and academic organizations, federal agencies, and professional societies.

About the National Institutes of Health (NIH): NIH, the nation's medical research agency, includes 27 Institutes and Centers and is a component of the U.S. Department of Health and Human Services. NIH is the primary federal agency conducting and supporting basic, clinical, and translational medical research, and is investigating the causes, treatments, and cures for both common and rare diseases. For more information about NIH and its programs, visit www.nih.gov.

Dear Francis and Tony,

I know that you have heard murmuring about Project Warp Speed. We had a call today with John Mascola, Carl Dieffenbach, Hilary Marston, Mary Marovich and Emily Erbelding to go through the proposal and discuss how it could feed into the ACTIV effort. [redacted] (b) (5) They suggested that I contact you to try to set up a brief call to go over the plan. I am attaching a slide deck that provides an overview and am happy to find the time whenever you are available.

Thanks so much for considering,
Peter

Abstract

Background Addressing COVID-19 is a pressing health and social concern. To date, many epidemic projections and policies addressing COVID-19 have been designed without seroprevalence data to inform epidemic parameters. We measured the seroprevalence of antibodies to SARS-CoV-2 in Santa Clara County. Methods On 4/3-4/4, 2020, we tested county residents for antibodies to SARS-CoV-2 using a lateral flow immunoassay. Participants were recruited using Facebook ads targeting a representative sample of the county by demographic and geographic characteristics. We report the prevalence of antibodies to SARS-CoV-2 in a sample of 3,330 people, adjusting for zip code, sex, and race/ethnicity. We also adjust for test performance characteristics using 3 different estimates: (i) the test manufacturer's data, (ii) a sample of 37 positive and 30 negative controls tested at Stanford, and (iii) a combination of both. Results The unadjusted prevalence of antibodies to SARS-CoV-2 in Santa Clara County was 1.5% (exact binomial 95CI 1.11-1.97%), and the population-weighted prevalence was 2.81% (95CI 2.24-3.37%). Under the three scenarios for test performance characteristics, the population prevalence of COVID-19 in Santa Clara ranged from 2.49% (95CI 1.80-3.17%) to 4.16% (2.58-5.70%). These prevalence estimates represent a range between 48,000 and 81,000 people infected in Santa Clara County by early April, 50-85-fold more than the number of confirmed cases. Conclusions The population prevalence of SARS-CoV-2 antibodies in Santa Clara County implies that the infection is much more widespread than indicated by the number of confirmed cases. Population prevalence estimates can now be used to calibrate epidemic and mortality projections.

(b) (6)

Thank you for your note. Shown below are my answers to your questions. I hope that you find them helpful.

1. How do you recommend I reassure our staff on dealing with the stressors of COVID-19?
   This is indeed an unprecedented and stressful time. Stress can often come from the unknown. In times of stress it is critical to take care of one's physical health, by eating well, getting enough sleep, and exercising. In addition, maintaining connections with family and friends (via phone calls, email, or video chatting) while physically socially distancing is very important.

2. Can COVID-19 be contracted from a corpse?
   Infection control measures should be undertaken when dealing with deceased individuals with known or suspected COVID-19. The CDC provides guidance on this issue here:Caution-https://www.cdc.gov/coronavirus/2019-ncov/hcp/guidance-postmortem-specimens.html < Caution-https://www.cdc.gov/coronavirus/2019-ncov/hcp/guidance-postmortem-specimens.html >

3. If someone has been a user of Hydroxychloroquine for years, are they susceptible to contracting COVID-19?
   Clinical trials are underway to determine if hydroxychloroquine is effective in preventing COVID-19 in exposed persons. Until we know the answer to this question, persons who take hydroxychloroquine on a daily basis for another medical condition should consider themselves vulnerable to COVID-19 and take appropriate and recommended measures to protect themselves.

4. Are masks and gloves truly effective, if so, why are so many medical professionals contracting the virus?
   I believe that infection control strategies which include proper use of personal protective equipment (PPE) as recommended by the CDC are effective._
   Caution-https://www.cdc.gov/coronavirus/2019-ncov/hcp/infection-control-recommendations.html?CDC_AA_refVal=https%3A%2F%2FCaution-www.cdc.gov%2Fcoronavirus%2F2019-ncov%2Finfection-control%2Fcontrol-recommendations.html < Caution-https://www.cdc.gov/coronavirus/2019-ncov/hcp/infection-control-recommendations.html?CDC_AA_refVal=https%3A%2F%2FCaution-www.cdc.gov%2Fcoronavirus%2F2019-ncov%2Finfection-control%2Fcontrol-recommendations.html >
   In cases where inadequate PPE is worn, or if is not put on/taken off according to proper procedure, the risk of contracting COVID is increased. In addition, healthcare workers on the front lines can be exposed if they encounter a patient who is not initially suspected of having COVID-19 without PPE, especially if they are exposed to aerosol generating processes.

5. What is the most important thing we should be doing, other than social distancing?
   Social distancing is key in order to avoid coming into contact with someone with COVID-19, but washing one's hands often (or using an alchohol-based hand sanitizer) and avoiding touching one's face with unwashed hands are critical as well, especially when coming into contact with surfaces that may have been touched by others or public places.

6. Finally, what keeps you up at night, regarding COVID-19?
   I have said in the past that what keeps me up at night is the possibility of a pandemic respiratory infection. We are in that reality now, and what keeps me up at night is the response, a major part of which is the development of an effective vaccine and treatments for COVID-19.

Best regards,
Tony

Subject: Coronavirus Questions for the Office of the Surgeon General

Dr. Fauci,

I am (b) (6), the antiterrorism and insider threat officer for the Office of the Surgeon General (Army) / U.S. Army Medical Command. I have been in government for nearly thirty-four years, and this is new to me. I see and hear the concerns of many people. You are the voice of reason for millions of concerned citizens. I have a few questions for you:

1. How do you recommend I reassure our staff on dealing with the stressors of COVID-19?

2. Can COVID-19 be contracted from a corpse?
3. If someone has been a user of Hydroxychloroquine for years, are they susceptible to contracting COVID-19?
4. Are masks and gloves truly effective, if so, why are so many medical professionals contracting the virus?
5. What is the most important thing we should be doing, other than social distancing?

Finally, what keeps you up at night, regarding COVID-19?

Thank you for your time and please be safe.

Subject: FW: Coronavirus Questions for the Office of the Surgeon General

(b) (6)

Thank you for your note. Shown below are my answers to your questions. I hope that you find them helpful.

1. How do you recommend I reassure our staff on dealing with the stressors of COVID-19?
   This is indeed an unprecedented and stressful time. Stress can often come from the unknown. In times of stress it is critical to take care of one's physical health, by eating well, getting enough sleep, and exercising. In addition, maintaining connections with family and friends (via phone calls, email, or video chatting) while physically socially distancing is very important.

2. Can COVID-19 be contracted from a corpse?
   Infection control measures should be undertaken when dealing with deceased individuals with known or suspected COVID-19. The CDC provides guidance on this issue here: https://www.cdc.gov/coronavirus/2019-ncov/hcp/guidance-postmortem-specimens.html

3. If someone has been a user of Hydroxychloroquine for years, are they susceptible to contracting COVID-19?
   Clinical trials are underway to determine if hydroxychloroquine is effective in preventing COVID-19 in exposed persons. Until we know the answer to this question, persons who take hydroxychloroquine on a daily basis for another medical condition should consider themselves vulnerable to COVID-19 and take appropriate and recommended measures to protect themselves.

4. Are masks and gloves truly effective, if so, why are so many medical professionals contracting the virus?
   I believe that infection control strategies which include proper use of personal protective equipment (PPE) as recommended by the CDC are effective._
   https://www.cdc.gov/coronavirus/2019-ncov/hcp/infection-control-recommendations.html?CDC_AA_refVal=https%3A%2F%2Fwww.cdc.gov%2Fcoronavirus%2F2019-ncov%2Finfection-control%2Fcontrol-recommendations.html
   In cases where inadequate PPE is worn, or if is not put on/taken off according to proper procedure, the risk of contracting COVID is increased. In addition, healthcare workers on the front lines can be exposed if they encounter a patient who is not initially suspected of having COVID-19 without PPE, especially if they are exposed to aerosol generating processes.

5. What is the most important thing we should be doing, other than social distancing?
   Social distancing is key in order to avoid coming into contact with someone with COVID-19, but washing one's hands often (or using an alchohol-based hand sanitizer) and avoiding touching one's face with unwashed hands are critical as well, especially when coming into contact with surfaces that may have been touched by others or public places.

6. Finally, what keeps you up at night, regarding COVID-19?
   I have said in the past that what keeps me up at night is the possibility of a pandemic respiratory infection. We are in that reality now, and what keeps me up at night is the response, a major part of which is the development of an effective vaccine and treatments for COVID-19.

Best regards,

Tony

COVID-19 – Potential Treatment

April 17, 2020

National Institute of Allergy and Infectious Diseases,
National Institutes of Health
31 Center Drive MSC 2520
Building 31, Room 7A03
Bethesda, MD 20892-2520

C/O Anthony S. Fauci, M.D.

Hello Dr. Fauci,

In the current state of medical knowledge and research in the pharmaceutical industry, there is no short- or medium-term solution to prevent disease or cure patients with SARS-Cov-2 (COVID-19).

With this letter, I would like to make you aware of the preventive and curative potential of essential oils (EOs); **lives could be saved.**

Scientific aromatherapy: use of aromatic compounds extracted from plants – essential oils – for medical purposes; 'hard' science of nature, based among other things, on in-depth knowledge of organic chemistry. We are not talking about perfumery or occult sciences.

According to Mr. Dominique BAUDOUX, an internationally known Belgian pharmacist and ''aromatologist'': ***there is a multitude of research on the antiviral properties of essential oils. The results are impressive and indisputable. Here are some viruses for which we have real data:***

- Severe acute respiratory syndrome virus SARS-Cov (it is a coronavirus)
- The H1N1 flu virus
- Avian influenza virus type H5N1 and subtypes H7N3 and H9N2
- The anti-infectious bronchitis virus (IBV)
- Herpes simplex virus HSV
- Dengue virus DEN
- Newcastle disease virus NDV
- Junin virus (an arena virus responsible for hemorrhagic fever)

Source : https://www.pranarom.com/blog/guide-des-huiles-essentielles/les-huiles-essentielles-efficaces-contre-lecoronavirus-vrai-ou-faux: See references 1 to 28 below.

To add meat to the bone, if you visit the **National Center for Biotechnology Information** (U.S.) :

- You will find nearly **225 000 references** on ''**essential oil.**''
  See : https://www.ncbi.nlm.nih.gov/search/all/?term=essential%20oil
- You will find approximately **22 000 references** on ''**essential oil + viral.**''
  See : https://www.ncbi.nlm.nih.gov/search/all/?term=essential%20oil%20+%20viral

In addition, according to a brief email exchange with Mr. Pierre FRANCHOMME, a French researcher, one of the leading experts in the field of medicinal essential oils, he informed me that: ***a recent Indian study (March 31) highlights the potential activity of 1,8 cineole (eucalyptol) on SARS-Cov-2****, as I suspected from my experience on other* ***enveloped viruses****.*

Note: the molecule 1,8 cineole is found in high concentration in eucalyptus EOs.

- Sharma, A.D.; Kaur, I. **Eucalyptol (1,8 cineole) from Eucalyptus Essential Oil a Potential Inhibitor of COVID 19 Corona Virus Infection by Molecular Docking Studies** .
  Preprints 2020, 2020030455 (doi: 10.20944/preprints202003.0455.v1).
  Source : https://www.preprints.org/manuscript/202003.0455/v1

Another study (2008) provided by Mr. Franchomme, **shows a high antiviral activity of bay laurel/leaf essential oil (*Laurus nobilis*) on SARS-Cov**, which appeared in November 2002 in Guangdong province, China and which prevailed until 2004.

- Loizzo, M. R., Saab, A. M., Tundis, R., Statti, G. A., Menichini, F., Lampronti, I., ... Doerr, H. W. (2008). **Phytochemical Analysis and in vitro Antiviral Activities of the Essential Oils of Seven Lebanon Species.** Chemistry & Biodiversity, 5(3), 461–470. doi :10.1002/cbdv.200890045
  Source : https://onlinelibrary.wiley.com/doi/abs/10.1002/cbdv.200890045

Since SARS-Cov and SARS-Cov-2 (COVID-19) are close relatives, it is quite possible that *Laurus nobilis* essential oil will be as effective on SARS-Cov-2.

Here are two other studies that should be of interest to researchers, according to Mr. FRANCHOMME:

- See reference 20 below **Efficacy of cineole in patients suffering from acute bronchitis: a placebo-controlled double-blind trial.** *Cough* **9,** 25 (2013).
  Source : https://doi.org/10.1186/1745-9974-9-25

Conclusions of this study : *The effects of Cineole in the treatment of acute bronchitis were clearly measurable and could be proven after a treatment period of merely 4 days. This study corroborates the fact that cineole actively and significantly reduces cough frequency after four days. Therefore it has been shown to have a great socioeconomic impact.*

- See also reference 22 below.

Also, according to Mr. FRANCHOMME, **a clinical study on the treatment of essential oils in patients with COVID-19 has just been undertaken in a hospital setting (100 patients), double blind against placebo.** I will know the results at the same time as everyone else and will inform you.

Here is a summary of Mr. FRANCHOMME's analysis:

(b) (4)

[redacted]

The scientific community is launched in search of a miracle drug in the basket of molecules already known for other indications. Our design is to trust the plant world, a great provider of remarkable molecules.

CONCLUSION

We need to think outside the box of allopathic medicine and synthetic drugs that offer no solution and put pressure on our leaders to **release funds for clinical research** on the treatment of patients suffering from COVID-19 using essential oils, as advocated by Mr. Franchomme.

To this end, M. FRANCHOMME confirmed to me this: *I am at the disposal of your authorities to provide and explain a protocol based on essential oils.*
His email address is : (b) (6)

In terms of a double-blind placebo clinical study, there is, as of today, a huge cohort of hospitalized patients, a significant portion of whom I suspect would be enthusiastic about voluntary enrolment.

For patients in critical care with a life-threatening prognosis, it is undoubtedly possible, given the circumstances, to bypass the usual research protocols and offer a last-resort treatment to these patients in an attempt to save their lives, with their permission or that of their legal representatives in case of temporary or permanent incapacity.

Even if it doesn't work, I don't think patients or their loved ones will blame your government for trying everything, but if you don't, I wouldn't like to be in your shoes!

Cordially,

Benoit Ponton

Nearly a third of 200 blood samples taken in Chelsea show exposure to coronavirus

Mass. General researcher says the results point to a 'raging epidemic,' but may also indicate the city is further along the disease curve than some other municipalities

By Jonathan Saltzman Globe Staff,Updated April 17, 2020, 6:26 p.m.

First responders loaded a patient into an ambulance from a nursing home where multiple people have contracted COID-19 in Chelsea, which has the highest concentration of COVID-19 infections in the state.Scott Eisen/Getty

Nearly one third of 200 Chelsea residents who gave a drop of blood to researchers on the street this week tested positive for antibodies linked to COVID-19, a startling indication of how widespread infections have been in the densely populated city.

Sixty-four residents who had a finger pricked in Bellingham Square on Tuesday and Wednesday had antibodies that the immune system makes to fight off the coronavirus, according to Massachusetts General Hospital physicians who ran the pilot study.

The 200 participants generally appeared healthy, but about half told the doctors they had had at least one symptom of COVID-19 in the past four weeks.

Public health experts already knew Chelsea hadthe state's highest rate of confirmed COVID-19 cases and that the actual rate was probably higher. At least 39 residents have died from the virus, and 712 had tested positive as of Tuesday, a rate of about 1,900 cases per 100,000 residents, or almost 2 percent.

Get Talking Points in your inboxAn afternoon recap of the day's most important business news, delivered Monday through Friday.

But the Mass. General researchers — who excluded anyone who had tested positive for the virus in the standard nasal swab test — found that 32 percent of participants have had COVID-19, and many didn't know it.

"I think it's both good news and bad news," said Dr. John Iafrate, vice chairman of MGH's pathology department and the study's principal investigator. "The bad news is that there's a raging epidemic in Chelsea, and many people walking on the street don't know that they're carrying the virus and that they may be exposing uninfected individuals in their families."

"On the good-news side, it suggests that Chelsea has made its way through a good part of the epidemic," he said. "They're probably further along than other towns."

Scientists suspect that people who recover from COVID-19 may be at least temporarily immune from catching it again. Several biotechs and academic laboratories, in fact, are seeking blood donations from people who have recovered, in the hopes that their antibodies can help create a treatment or vaccine.

Chelsea's city manager, Thomas Ambrosino, said he learned the results of the pilot study Thursday in a conference call with the researchers. He was dismayed, but not shocked.

Related: Chelsea city manager sounds urgent alarm, calls for residents to stay home 24 hours a day

"We've long thought that the reported numbers are vastly under-counting what the actual infection is," said Ambrosino, who has called his city the epicenter of the crisis in Massachusetts. "Those reported numbers are based on positive COVID-19 tests, and we're all aware that a very, very small percentage of people in Chelsea and everywhere are getting COVID-19 tests."

"Still," he added, "it's kind of sobering that 30 percent of a random group of 200 people that are showing no symptoms are, in fact, infected. It's all the more reason for everyone to be practicing physical distancing."

Indeed, one of the doctors who tested volunteers in Bellingham Square said it's possible that some of the people who had the antibodies are still contagious.

"Just because you have the antibodies doesn't mean you've cleared the virus," said Dr. Vivek Naranbhai, a clinical fellow in hematology and oncology.

Researchers said the test results, which had yet to be shared with state officials late Friday, couldn't necessarily be extrapolated for the city's roughly 40,000 residents. Still, the findings provided a valuable snapshot of a community that medical experts say is especially vulnerable to COVID-19.

Chelsea covers only about two square miles, across the Mystic River from Boston. For generations, it has attracted new immigrants, and about 65 percent of its residents are Latino. Many live in three-decker houses, Ambrosino said, where it's hard for people to isolate themselves. Many work in the hospitality industry and health-related fields, where exposure to the virus is greater. And a lot of them must go to work during the pandemic.

To get Chelsea residents to participate in the study — which included a questionnaire that was available in English, Spanish, and Portuguese — investigators allowed them to remain anonymous. But that meant none of the participants received the results of the blood tests.

The doctors used a diagnostic device made by BioMedomics, of Morrisville, N.C., to analyze drops of blood. It resembled an over-the-counter pregnancy test and generated results on the street in about 10 minutes. Although the test hasn't won the approval of the Food and Drug Administration, Iafrate, the principal investigator, said Mass. General determined it's reliable.

Within days, the physicians said, they hope to set up a medical tent outside the Mass. General Chelsea Healthcare Center to perform more antibodies tests with the device. The site will be located near a tent set up weeks ago to run standard PCR, or polymerase chain reaction, tests for people with active coronavirus symptoms. The latter uses nasal swabs to detect whether the virus is present at the time; the antibodies blood test reveals whether someone was infected in the past.

In addition to the new testing site, the researchers want to expand the study to other Massachusetts cities and towns. For all of those studies, Mass. General doctors plan to obtain the identities of participants so physicians can provide the results. But first the researchers need to come up with guidelines for what participants should do if they test positive for antibodies.

Dr. Dean Xerras, medical director of the Mass. General Chelsea Healthcare Center and a co-investigator in the study, said it illustrates why it's essential for Chelsea and other communities to perform more tests, regardless of whether they detect antibodies or the virus itself.

"Knowing how many people are infected is critical," said Xerras, a longtime member of the city's board of health. "We need to get them isolated. We need to get masks delivered to the city. We need to launch more safe isolation sites. We need to be able to identify cases and then give people the things they need to prevent perpetuation of the spread."

Chelsea and Revere officials, with help from the state Department of Public Health and the Massachusetts Emergency Management Agency, secured almost 150 rooms at a Quality Inn in Revere this week for residents who are recovering from COVID-19 and unable to isolate themselves at home, according to Ambrosino. So far, only a handful of those rooms are occupied.

Governor Charlie Baker on Thursday staunchly defended the state's handling of the escalating outbreak in Chelsea, including asserting, without offering details, that city leaders have turned down help from his administration.

The governor's claim surprised officials in Chelsea who told the Globe this week that the state, and even health care providers, should have recognized the virus's rapid spread through the city sooner.

Most of the US managing although still a heavy heavy lift in some places – NY, Boston, some in Chicago – but most of the US managing. The big issue like everywhere is how do we put society back together.

Will be published on Monday – our tribute to many people and 3 individuals.

Hello Howard,

I hope you are well. Just a line to say that the podcasts are incredible.
I hope you are ok. I am very sorry for the colleagues in New York. I know it's very tough there and also in other parts of US.
Things are getting better here.

Keep up the amazing work.

Kind regards,

Maurizio

The estimates on this page have been updated from an earlier report published in December 2018 based on more recently available information. There is a trade-off between timeliness and accuracy of the burden estimates. To provide timely burden estimates to the public, clinicians, and public health decision-makers, we use preliminary data that may lead to over- or under-estimates of the true burden. However, each season's estimates will be finalized when data on testing practices and deaths for that season are available.

For the revised 2017-2018 estimates, we included additional information in our estimation regarding influenza testing practices. The surveillance system used to estimate influenza-related hospitalizations, FluSurv-NET, collects data on patients hospitalized with laboratory-confirmed influenza. Influenza testing is done at the request of the clinician, but not everyone is tested and influenza tests are not perfectly accurate. Thus, the reports of laboratory-confirmed influenza-related hospitalizations to FluSurv-NET are likely underestimates of the true number of hospitalizations. To adjust for this, CDC collects data annually from participating FluSurv-NET sites on the amount of influenza testing and the type of test that is used at the site, and this information is used to correct for the possible underestimate of influenza-related hospitalizations. These testing data are often not available for up to two years after the end of an influenza season, and thus the estimates are revised when additional testing data become available. For the original preliminary 2017-2018 burden estimates, data on testing practices during the 2014-2015 season were used to make preliminary estimates because this season had the highest levels of testing among the prior seasons for which data were available and resulted in the most conservative (lowest) estimates of burden. More recent data from the 2016-17 season show that influenza testing has been increasing among most age groups. The current estimates were made using the highest testing rate for each age-group during 2010-11 to 2016-17 and has resulted in some burden estimates being lower than previously estimated.

Additionally, the method we use to estimate influenza-associated deaths relies on additional data from FluSurv-NET and the National Center for Health Statistics (data on cause of deaths and numbers of deaths that occur in versus outside the hospital) that are also not available for up to two years after the end of the season being estimated.

The 2017-2018 estimates are still preliminary because not all of the required data are currently available. When those data become available, these estimates will be updated again and the results may change.

More answers to frequently asked questions about CDC's influenza burden estimates are available.

> Building on the impact of our annual TIME 100 and TIME 100 Health summits, as well as our ongoing coverage of COVID-19, on **Thursday, April 23**, TIME will launch its first-ever virtual event series, "TIME Talks: Finding Hope." Our goal is to convene a group of the world's leading voices, including TIME 100 honorees, to spotlight the important work they're doing to combat this crisis, and to help our viewers navigate this new reality.

As part of our launch event, scheduled to take place between noon and 3 p.m. ET, we'd like to invite you
to participate in a short, 10- to 20-minute video interview with a TIME editor on public health policies that could be implemented at the national level to strengthen the responses to this and future pandemics—addressing in particular lessons learned from the initial response to the coronavirus.
We would also welcome your thoughts on how we plan to navigate out of the pandemic and what the new normal will look like. (Please note that we are open to discussing other topics as well.)
Each conversation will be streamed and promoted across TIME's platforms, which reach a combined audience of 100 million people around
the world.
As
one of our invited speakers, you would also be part of an extraordinary community of leaders who are shaping our world. Past speakers at TIME events include House Speaker
Nancy Pelosi,
Apple CEO
Tim Cook,
Primatologist
Jane Goodall,
White House Adviser
Jared Kushner,
Chef
José Andrés,
Me Too Movement Founder **Tarana Burke**,
Producer Director
Ryan Murphy,
and many others.
Thank
you in advance for considering this invitation. Cate, our program coordinator, and I are happy to help with any questions you may have.
Looking forward to hearing from you.
Best,
Alice

This plan includes prioritized expansion of testing and building a corps of contact tracers in the US, using tried-and-true public health measures at scale. There are four essential actions to box in the virus: 1) Expand testing; 2) Isolate infected people to prevent spread; 3) Identify contacts who may have exposed; 4) Quarantine contacts. As you know, all four are crucial; if any one is lacking, the virus can escape and spread explosively again. Success requires a massive expansion of our public health capacity around the country and world.

Dear Colleagues,

Thank you all for your support as we launch the new COVID-19 lecture series. The live videocast of yesterday's talk was in high demand and, unfortunately, many of you were unable to gain access. This was partly because of the large number of viewers. We are working to remedy the issues in preparation for next week's lecture.

Dr. Marston's talk, "The Biomedical Research Response to COVID-19: A View from NIAID," is now archived at https://videocast.nih.gov/watch=36375.

Dear Sir,

Many of us in the hyperbaric medicine community believe ~~that~~ there exists a simple therapy to halt the inflammatory process and reverse the lung damage.

This process will also simultaneously provide many times over the amount of oxygenation offered by the coma-inducing intubation ventilator procedure.

We are reaching out to our network to make contact with the airlines to secure the use of an airplane with an onboard APU (Auxiliary Power Unit--used to pressurize the aircraft) for a month, to treat COVID-19 patients and show the effectiveness of the concept.

Initial testing indicates in one trial study 100% improvement while all others underway, although small scale, are showing great benefit at extremely low cost and patient risk.

So what is this new procedure? Hyperbaric Oxygen Therapy or HBOT; first used successfully in 1918 for Spanish Flu cases. HBOT is viable and appears to work well but we do not have the number of pressure vessels / HB chambers available to treat the possibly 100,000+ who need the therapy now.

Several of us in our small community have arrived at the same idea in several countries.

The idea is no longer new or unique.

Again, I am proposing use an aircraft as the pressure vessel. Every airplane with a pressurized cabin (i.e., all commercial airline aircraft) is routinely pressurized to around 9 psi (some go higher) while they are on the ground, as part of their normal airworthiness testing.

Myself and others have suggested that one or more of the hundreds of grounded aircraft be provided to complete the trial test.

737 Max are not flying but are a perfect pressure vessel for the procedure.

Could you help us contact Boeing, the airlines or the military?

No aircraft modification is required whatsoever so that is one of the issues off the table.

The aircraft remains parked on the ground with access for ambulatory patients via a stairway. No jetway is required unless we expand this in the future for non-ambulatory patients.

We would need to place standard DOT portable oxygen tanks in the cabin along with the associated manifold, pressure regulator, flow-meters and tubing.

Each patient will have his/her own anesthesia mask and breathing circuit.

There is no cross contamination between patients or the cabin environment atmosphere as each mask incorporates a Viral Filter Kit to help protect the technicians who are also breathing from a secure, clean source.

All safety issues are addressed in the plan.

The same process, once proven could be utilized by our military and of course our Navy who is experiencing possible outbreaks as we speak.

This is important to me personally [redacted] (b) (6)

The Patriot Clinic in Oklahoma City is my personal charity where we have provided over 15,000 free HBOT treatments for our beloved vets and 30,000+ at cost or below.

We are not asking for money. Nor, am I selling anything in this effort. With the help of a small group of supporters, (Ralph Crafts & family) my company is willing to provide the equipment, training and technical support to begin the process.

Thank you for your ongoing service to our country, and thank you for reading and considering my proposal.

I sure would appreciate your help.

Semper Fi!

Sincerely,
Edward A. Betts

Sir:

As one old Marine to another Marine, this letter contains the "straight scoop," and is intended to provide information that can help stop the spread of COVID-19, and ensure the continuity of critical segments of government.

Hyperbaric Oxygen Therapy (HBOT) has been in use for over 100 years, and was the only effective treatment for the 1918 flu pandemic. HBOT is being used worldwide to treat a variety of serious diseases, and has been proven to be immediately effective in treating severe COVID-19 cases, with a success rate close to 100%.

HBOT is simply breathing high-purity oxygen (92% or higher) for 60-90 minutes in a pressurized environment (typically between 8 and 15psi—the higher pressure is about the same pressure as doing a SCUBA dive to 33 feet). HBOT chambers can be 1-2 person sizes and portable, up to 12-seat chambers which are used for Navy operations. [redacted] (b) (6) I have a one-person chamber in our home, and we can attest to its effectiveness in treating severe breathing problems, like pneumonia, infections, and wounds.

The currently publicized and widely accepted statement that there is no effective treatment for COVID-19 is wrong. HBOT treatments, usually just a single one-hour session, provide immediate improvements in lung function, blood-oxygen levels, and organ recovery. Unlike respirators, which do more damage than good and are basically a death sentence, HBOT provides an immediate path for recovery and healing.

A team of very experienced scientists and HBOT experts have developed a concept that will enable the effective treatment of large numbers of people by using some of the thousands of grounded commercial aircraft as large HBOT chambers.

I'm an old Marine Corps jet pilot, and we use our [redacted] (b) (6) so I have the professional contacts to confirm and verify the efficacy of the concept.

Every airplane with a pressurized cabin (i.e., all airline aircraft) is routinely pressurized to around 9psi (some go higher) while they are on the ground, as part of their normal airworthiness testing.

We have equipment staged and ready to go now, to treat 25 COVID-19 patients at a time—we need an airplane, and we can be treating people and saving lives in about 36 hours.

The aircraft we need remain parked on the ground, no modifications are needed—we will simply place portable oxygen tanks in the cabin with the associated tubing, manifold, and pressure regulators, and each patient will have his/her own anesthesia mask.

There is no cross contamination between patients, because everyone is breathing oxygen from their own personal mask.

We are reaching out to our contacts in the airlines to ask for the use of an airplane and APU (Auxiliary Power Unit—used to pressurize the aircraft) for a month, to treat COVID-19 patients and show the effectiveness of the concept.

We could do the same thing with a single military transport aircraft (many of which have been configured for medical use).

As a Marine, and with my knowledge of HBOT, the recent death of the Theodore Roosevelt sailor is particularly upsetting, knowing that a couple of Senior Chiefs or Marine Master Sergeants could have configured an aircraft in Guam in a couple of hours and be treating all the sailors from the carrier.

We are not asking for money—my wife and I are paying for all the required equipment and support personnel.

HBOT chambers are easily implemented and supported—you could have one in your office (ours is 8' long and 34" in diameter when pressurized) and it would only take a couple of hours to train your corpsmen to operate it. I don't know of a better guarantee of continuity in the current pandemic.

Please note that [redacted] (b) (6) I have no financial or political interests in the HBOT treatment concept, companies, or manufacturers—we receive no benefits/rewards, other than helping to save many lives.

You will receive a letter from Ed Betts—he's a good man, really knows his stuff, and I trust him with my life—please take what he says seriously.

Thank you for your ongoing service to our country, and thank you for reading and considering the information in this letter.

Semper Fi!

Respectfully,

Ralph E. Crafts

I have a suggestion for 3 potent antiviral agents, cheap and readily available, that may prevent viral shedding. No viral shedding? No infectivity. The concept is that EVERYONE should take these items. Two of the items also positively affect heme binding. Covid-19 binds to heme causing O2 desaturation, lung failure and death.

Chloroquine, an antimalarial drug, is now being used to treat Covid-19. Its mechanism was found in the 1970's to inhibit thromboxane https://scholar.google.com/scholar?hl=en&as_sdt=0%2C5&q=chloroquine+thromboxane&btnG= The problem with chloroquine was that it also elevated levels of prostaglandin F2alpha. In 1980, Srivastava, an Indian biochemist working in Denmark found that GINGER is a potent inhibitor of thromboxane synthetase. I wrote a number of papers in the 1980's on use of ginger: https://scholar.google.com/scholar?hl=en&as_sdt=0%2C5&q=backon+ginger&btnG=

Subject: Standing Up for Truth

4/13/20

Anthony S. Fauci, M.D.
Director, NIAID

Dear Dr. Fauci:

As a fellow graduate of Regis High School [redacted] (b) (6) and very active alumnus, I am writing to you out of deep concern for our nation. I am reading reports in The NY Times that President Trump may be considering firing you for telling the truth about the negative consequences of delays in mobilizing the American response to the coronavirus threat. The Times had run articles in recent days detailing the pertinent facts that place the blame for this delay squarely on President Trump. We can reasonably infer that significant loss of life and financial harm resulted from this delay.

The mission of Regis was to mold young men with leadership potential to be "men for others" in the Jesuit tradition. To achieve that goal Regis also sought to hone our intellectual talents and imbue us with Christian morality to succeed throughout our lives in a persistent pursuit of excellence, which embodies the truth. A mission to relentlessly pursue and proclaim the truth.

The fact that you have consistently and courageously pursued that mission during one of the darkest times in our history explains the extraordinary admiration in which you are held by millions of Americans. You have won their confidence, which has enabled so many to make exquisite sacrifices to win this crucial battle. People will follow heroes, which is precisely how the vast majority views you.

I am writing because I want you to know how important you are to America. We cannot lose you and we can not lose the value of truth. Truth must prevail or our precious democracy is in grave peril.

Consequently, and I know I speak for the vast majority of Americans whose decency is beyond question, if Donald Trump seeks your removal, please resist for the sake of our nation. An appeal to the populace will not go unanswered. Religious leaders will flock to your defense, as will the media and leading political leaders, including Biden and Cuomo. Republicans can not afford to alienate what you stand for. Jeopardizing the Catholic vote would be suicide.

In closing, know how proud all Regians are of you. You will always be an inspiration to those who understand the value of service to others.

Our prayers are with you.

Subject: Flagging NIH Media Products

Tony,

Hope all is well and that you are staying safe and healthy. [redacted] (b)(5) PCP. Our plan is to batch and send these to Hilary, Patty, and Kim on Thursdays/Fridays each week, unless there is a time sensitivity to them. For the time-sensitive requests, I will flag them for you (after a couple levels of filtering).

So, that said, I am reaching out to flag the following time-sensitive items for your awareness and sharing with the remainder of the Task Force, as appropriate. You'll note that both of these are yours, so this email may be unnecessary. If so, apologies for adding to your (what much be crazy) inbox.

Item 1: **National Institute of Allergy and Infectious Diseases Strategic Plan for COVID-19 Research (NEW)**

> **Activity Type**: Strategic Plan
>
> **Summary:** A new strategic research plan from the National Institutes of Health aims to build on — and accelerate — new and existing research efforts to prevent, diagnose, and treat COVID-19, as well as understand the underlying causative agent of this disease, severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2). The Plan prioritizes research to improve fundamental knowledge of SARS-CoV-2 virus and COVID-19 disease, develop diagnostics and assays, characterize and test therapeutics, as well as develop safe and effective vaccines targeted toward decreasing disease incidence, mitigating morbidity, and prevention mortality from this disease.

Impact on COVID-19 Pandemic Response: The strategic plan outlines a research plan targeted at prevention and mitigation of COVID-19 disease.

Type of Action: Publication

Potential for Press Coverage: Mainstream Press

Press Release in Development?: Yes

Item 2: NIH study validates decontamination methods for re-use of N95 respirators

- **Activity Type**: Significant scientific finding

Summary: NIAID/NIH-funded study shows that N95 respirators can be decontaminated effectively and maintain functional integrity for up to three uses. Researchers tested the decontamination of small sections of N95 filter fabric that had been exposed to SARS-CoV-2. Decontamination methods tested included vaporized hydrogen peroxide (VHP), 70-degree Celsius dry heat, ultraviolet light, and 70% ethanol spray. All four methods eliminated detectable viable virus from the N95 fabric test samples. The results will be posted on a preprint server (timing TBD). The findings are not yet peer-reviewed but are being shared to assist the public health response to COVID-19.

Impact on COVID-19 Pandemic Response: Study shows that respirators could be used multiple times (2-3 times depending on decontamination method)

ICO: NIAID

NIH Point-of-Contact: Vincent Munster, Ph.D., and Marshall Bloom, M.D., from NIAID's Laboratory of Virology are available to comment on this study.

COVID-19 Treatment

Our main goal is to provide up-to-date information and teaching slide decks focused on clinical trials and published data related to potential high-impact treatments of persons with COVID-19.

U.S. Clinical Trials

Quick links to COVID-19 clinical trials and expanded access programs in the United States. The treatment regimens and trial list are organized alphabetically.

Treatments

Selected high-impact and high interest COVID-19 treatments. Includes medication summaries, studies, and treatment specific references.

Teaching Resources

COVID-19 treatment PowerPoint slide decks. All slide decks can be downloaded and used for educational purposes without obtaining permission from our website.

Cc: List DEPDIR-L <DEPDIR-L@list.nih.gov>; NIH Director's Executive Committee <OD-SmallStaff@mail.nih.gov>
Subject: Request: Proposal Summaries - POCs Due 4/15; Summaries Due 4/20

Colleagues,

As discussed this afternoon, please find attached the POC sign-up sheet (tab 1; tabs 2-3 list the various proposals by category, theme, and IC), the IC-specific proposals, and the economic recovery proposals. We ask that you please complete the POC sign-up and send it to Jordan Gladman [redacted] (b) (6) by **5 pm on Wednesday April 15**. We will then collate and distribute the completed spreadsheet to the Chairs for each of the themes and post it on the ICD SharePoint site. The individual proposals are imbedded in the pdf as folders sorted by theme. If you feel your proposal would fit better with a different working group, please feel free to engage with them.

We ask that, once the POCs have been have been identified, you quickly assemble to begin refining and synergizing your proposals. Each Chair should coordinate with their group to develop a 2 page max summary of the theme's research, along with a single combined budget. The summary should integrate the IC proposals as much as possible; however, it is fine (for valid/justifiable reasons) to describe a few unique projects that fall under the theme as well. That is, if they don't make sense to integrate, you don't have to, but please be sure to include them in the summary. These summaries should be sent to Larry and me (cc Jordan Gladman) by **noon on April 20**. We will build off these summaries to generate a document for Francis' review, which we ultimately hope will be informative as we prepare for a potential fourth supplement.

The ask in short:

- **April 15 at 5 pm** – send your POCs to Jordan, who will then distribute the completed spreadsheet to the chairs
- **April 20 at 12 pm** – chairs to send a 2 page summary of their theme (with combined budget)

Subject: Mask wearing policy at our University Hospital

Dear Dr. Fauci,

My name is Ray DuBois and in addition to being the Dean of Medicine here at the Medical University of South Carolina in Charleston, I chair the Board of Scientific Councilors for the NCI. The mask wearing policy for our Health System is developed by our infection control group and not by the College of Medicine.

Currently, we have a **"voluntary"** mask wearing policy for the health system and our main University Hospital. Based on your recent comments about asymptomatic and pre-symptomatic carriers of COVID-19, do you agree that keeping this voluntary is the correct approach?

Obviously, your opinion here is extremely well respected and I would like for us to provide the safest environment possible for our faculty, employees and patients.

Subject: Announcement--ASM's COVID-19 Research Registry

Dear Tony and NIAID friends –

the mission of the American Society for Microbiology (ASM) to promote and advance the microbial sciences has perhaps never been more clearly in focus than during the current SARS-CoV-2 pandemic. Accelerating basic research is key to ASM's mission– it is where cure and prevention begin. It is impressive how rapidly research on SARS-CoV-2 /COVID-19 has advanced in just a few weeks, but easily accessing new and relevant research has been a challenge for basic researchers. When ASM's Council on Microbial Sciences held a COVID-19 summit to identify the most significant scientific work on the virus, the coronavirus researchers and clinical microbiologists raised the need for the scientific community to curate important COVID-19 research.

ASM is excited to announce the launch of the COVID-19 Research Registry, a platform curated and vetted by experts in the field of virology and related disciplines to provide immediate access to top COVID-19 research.

I am proud that **Lynn Enquist**, Ph.D., Henry L. Hillman Professor in Molecular Biology, Princeton University and former ASM President, will serve as Chief Curator for this Registry. **Dr. Harold Varmus**, Lewis Thomas University Professor of Medicine, Weill Cornell Medicine has agreed to join us as Chief Consultant on the project.

We are honored to have the following as Assistant Curators-in-Chief:

- Rozanne M. Sandri-Goldin, Ph.D., Chancellor's Professor, Microbiology & Molecular Genetics, University of California, Irvine and Editor-in-Chief of ASM's *Journal of Virology*
- Vaughn Cooper, Ph.D., Professor, Microbiology & Molecular Genetics, University of Pittsburgh, and current ASM Board member

The entire curatorial board is listed on the Registry site.

ASM is proud to add this initiative to our ongoing efforts. Through its capillary network of clinical microbiologists around the country and the world, ASM has accelerated communication and cleared roadblocks to ramp up SARS-CoV-2 testing. We continue to work closely with our dedicated colleagues, the indefatigable clinical microbiologists manning the front lines in hospitals and testing labs during this unprecedented global emergency. We send our thanks—and admiration--to these ASM members who are contributing directly to saving lives in this perilous time.

Our COVID-19 resource page provides important ASM updates and current information on the coronavirus. We are also working with the news media to provide authoritative ASM experts and reliable material on the microbiology of viral epidemics. ASM journals is also providing free access to more than 50 research articles published over the last year in our 16 scholarly journals and expediting review for submitted papers related to coronavirus, ensuring that new research is quickly made available to the scientific community.

We are hoping that researchers will find the COVID-19 Research Registry a useful resource. We look forward to your comments, questions or suggestions, since your input will be critical for improving this platform and making it useful for the scientific community. All feedback can be sent to covid19registry@asmusa.org. We are all in this together.

Sincerely,

Stefano Bertuzzi

Subject: Request: Proposal Summaries - POCs Due 4/15; Summaries Due 4/20

Colleagues,

As discussed this afternoon, please find attached the POC sign-up sheet (tab 1; tabs 2-3 list the various proposals by category, theme, and IC), the IC-specific proposals, and the economic recovery proposals. We ask that you please complete the POC sign-up and send it to Jordan Gladman (jordan.gladman@nih.gov) by **5 pm on Wednesday April 15**. We will then collate and distribute the completed spreadsheet to the Chairs for each of the themes and post it on the ICD SharePoint site. The individual proposals are imbedded in the pdf as folders sorted by theme. If you feel your proposal would fit better with a different working group, please feel free to engage with them.

We ask that, once the POCs have been have been identified, you quickly assemble to begin refining and synergizing your proposals. Each Chair should coordinate with their group to develop a 2 page max summary of the theme's research, along with a single combined budget. The summary should integrate the IC proposals as much as possible; however, it is fine (for valid/justifiable reasons) to describe a few unique projects that fall under the theme as well. That is, if they don't make sense to integrate, you don't have to, but please be sure to include them in the summary. These summaries should be sent to Larry and me (cc Jordan Gladman) by **noon on April 20**. We will build off these summaries to generate a document for Francis' review, which we ultimately hope will be informative as we prepare for a potential fourth supplement.

The ask in short:

- **April 15 at 5 pm** – send your POCs to Jordan, who will then distribute the completed spreadsheet to the chairs
- **April 20 at 12 pm** – chairs to send a 2 page summary of their theme (with combined budget)

Best,

Tara A. Schwetz, PhD
Acting Director, NINR
Associate Deputy Director, NIH

Good Afternoon,

On the behalf of the Association of Independent Research Institutes (AIRI), I wanted to notify you that AIRI has awarded Dr. Tony Fauci with its 2020 Public Service Award in recognition of his exemplary leadership during the novel coronavirus pandemic. The AIRI Public Service Award is the highest honor awarded by our organization and we're very pleased to present this award to Dr. Fauci. A list of past awardees can be found here.

Please see the official award letter attached and let us know any questions.

Regards,

Carolyn:

Thanks for the note. I understand that you will be hearing from Francis Collins on the Public Private Partnership (PPP) that we have put together to combine the resources and assets of industry and the academic community that is largely supported by NIH, particularly NIAID in the context of COBID-19. It is the functional equivalent of a National Strategy. We at NIAID and to some extent other institutes are leveraging our vast clinical trials networks that we built for other infectious diseases, particularly, but not exclusively HIV/AIDS, to provide the capacity to conduct clinical trials (NIH-sponsored as well as industry-sponsored) for both vaccines and therapeutics for COVID-19. For your interest, I am attaching a copy (not yet released) of the NIAID Strategic Plan for COVID-19 Research. It is an outline that will be supplemented with an implementation plan.

Best regards,
Tony

To: Mollet, Melissa (NBCUniversal, WRC)
Subject: [EXTERNAL] Therapy for COVID-19; Results of Trial in Italy

Melissa,

I wanted to expand a bit on the COVID-19 therapy I mentioned and provide some information about the man who is developing it. Hoping that you can get this into the right hands, as it seems like a very promising lead in this fight.

The therapy, invented by Professor Claudio De Simone, has shown extremely encouraging results in a preliminary trial at the Infectious Diseases Clinic of the University "La Sapienza" in Rome, Italy. Professor De Simone convinced the doctors there to start a trial on patients affected by COVID-19. Considering the excellent results obtained, the number of patients enrolled is increasing day after day. Our firm became aware of these results directly from Professor De Simone, who has been a client of our managing partner, Jeremy Schulman, since 2015.

The formulation employed in these patients at the La Sapienza Infectious Diseases Clinic is manufactured in France and known as "SIVOMIXX." The product is a specialized blend of eight different freeze-dried bacteria with considerable antiviral and anti-inflammatory activity. Patients admitted to the clinic at La Sapienza, presenting as positive for COVID-19 and with the typical symptoms of the disease, are being treated by oral bacteriotherapy utilizing SIVOMIXX. In each case, SIVOMIXX administration was followed by a dramatic improvement in their conditions. The key takeaways are that use of SIVOMIXX correlated with fewer deaths (zero in the treated group), fewer patients transferred to the ICU, and a dramatically reduced risk of patient intubations. The sponsors of the trial using SIVOMIXX are now beginning to enroll patients with severe cases who have been admitted to the ICU.

Attached to this email is a confidential dossier about the SIVOMIXX product and a summary of the ongoing study. Upon request, I am also able to send you an Excel file containing the raw data from the study, so NIH can review them, with the understanding that this should be treated as "highly confidential." Since the clinical trial is continuing in Italy, we expect to have results covering additional patients on a rolling basis. The researchers conducting the study intend to publish their results in the coming weeks. However, considering the pandemic and the lack of effective treatment options, we want to make NIH aware of Professor De Simone's therapy without any delay.

SIVOMIXX is a relatively new formulation developed by Professor De Simone, currently in limited commercial production at a manufacturing facility in France. Professor De Simone has sufficient supply available to utilize with 100-150 COVID-19 patients immediately. Professor De Simone could, on his own, arrange a small-scale supply to use with hundreds of additional patients in the United States. He is willing to provide his current inventory of the product to the United States government. He expects that the Trump administration could quickly confirm the efficacy of SIVOMIXX to significantly improve symptoms of COVID-19 and reduce the duration of patient hospital stays. After that, Professor De Simone is willing to collaborate with the administration to bring a large-scale production of SIVOMIXX for use throughout the United States, Italy (where he was born), and Switzerland (where he lives). Professor De Simone already has ongoing partnerships with a number of manufacturing companies, including one in the United States, for the production of another one of his products (Visbiome, referenced below). With appropriate guidance and instruction from the Trump administration, we believe the U.S. manufacturing companies could re-tool to produce SIVOMIXX on a large scale within several weeks.

Professor De Simone (more information about him below) and Jeremy will do whatever it takes to bring this critical therapy to as many Americans as possible on an urgent basis. Jeremy can be reached at anytime on his cell phone– (b) (6)

Thanks so much for passing this on.

Best,

Jake

About Professor De Simone. Professor De Simone is a world-renowned expert in gastroenterology and the inventor of several highly successful probiotic medical foods. Until 2010, he was an Associate Professor for the Infectious Diseases Group at the Department of Medicine and Surgery of the University of L'Aquila, Italy. Subsequently, he was appointed Head of the Infectious Disease Department and Director of the AIDS Coordination Group of the Abruzzi region, Italy. He is currently a retired Professor of Internal Medicine, still collaborating with the University, and a Fellow of the American Gastroenterology Association. Professor De Simone's research specialties have been in the fields of immuno-pathogenesis of infectious diseases. He has published the results of his research activities in over 200 scientific articles, reviews, case reports, and book chapters. Professor De Simone is both a researcher and a medical practitioner. He tests his laboratory hypotheses in the university hospital clinic on patients with serious diseases. He was responsible for controlling the AIDS pandemic in Italy's Abruzzi region in the 1990's.

Products developed according to Professor De Simone's know-how have shown positive results in patients with serious diseases. One of his signature formulations, known as the "De Simone Formulation," is now sold in the United States as "Visbiome." The De Simone Formulation has been the subject of more than 70 published human clinical trials demonstrating its efficacy in managing severe gastrointestinal symptoms from such diseases as ulcerative colitis, pouchitis, and liver diseases. Concerning pouchitis, the De Simone Formulation is recognized by the world's professional gastroenterology societies as a "standard of care," an achievement that no other probiotic substance previously has attained. The De Simone Formulation became the "gold standard" in its therapeutic class. Its role in patient care has been endorsed in the guidelines published by the American Gastroenterology Association ("AGA"), the European Crohn's and Colitis Organization ("ECCO"), and the British Society of Gastroenterology, as well as in the New England Journal of Medicine.

Dear Tony, I hope this email finds you well. I wanted to see if you had a few minutes to talk over the next few weeks. I recently began hosting a daily podcast that focuses on the COVID-19 pandemic and responses from thought leaders across industries – I would like for you to join me as my guest. I have also reached out to Hugh Auchincloss as well but still waiting to hear.

Our guests so far include Francis Collins, Alex Gorsky, David Baltimore*(Nobel Laureate)*, Jim Allison*(Nobel Laureate)/*Pam Sharma, Jo Ann Jenkins, Eric Schmidt, Rod Hochman, Carmine Di Sibio, Arie Belldegrun, Peggy Hamburg, Rodney McMullen, Bruce Broussard, Vas Narasimhan , Joe Tsai, Steve Ballmer, Jeff Skoll, Sue Desmond-Hellmann, Rob Manfred, Judy Faulkner, Bob Bradway, Tal Zaks, Ray Dalio, David Solomon, Barbara Humpton, Dr. Steven Rosenberg, Dr. Richard Stone, Dr. Kurt Newman, Vivek Ramaswamy, Francis deSouza

I record the interviews on Mondays, Wednesdays-Fridays starting at 7:30 a.m. Pacific/10:30 a.m. Eastern. Each episode will last 10-20 minutes. Our team would get you set-up to join remotely by phone.

The interviews are available on the Milken Institute website as well as on Spotify and Apple Podcasts. . I opened up the series with Francis Collins a few weeks ago , click here to have a listen.

If you're interested in joining me, my team (copied) will circle back to you with another email detailing the subject matter and technical information.

Please stay safe & healthy.

All the best,
Mike

Subject: Re: US-Georgia biomedical collaboration

Tengiz:
Thank you for your kind note. I am pleased to see that Georgia has controlled the outbreak very well. Stay well.
Best regards,
Tony

> On Apr 14, 2020, at 10:24 AM, Tengiz Tsertsvadze [redacted] (b) (6)>wrote:
>
> Dear Dr. Fauci,
>
> I am writing this letter on behalf of the community of infectious diseases specialists of Georgia to express our deepest respect to you. I recall with great pleasure all our previous meetings, especially the last one in 2017, when I, together with my team members, had an opportunity to visit you at NIH.
>
> We are grateful to you and your team for the most important contribution to establishing US-Georgia biomedical collaboration that significantly increased our country's research and practical capacities. Your personal role in combating HIV and other emerging epidemics such as SARS, MERS, Zika, Ebola, cannot be overestimated. I am confident that your leading role in this fight against COVID-19 will be crucial for defeating the pandemic not only in the United States, but around the globe.
>
> We closely follow your briefings and interviews on COVID-19 (including recent very interesting conversation with Dr. Howard Bauchner at JAMA) and as always your views are very apt and to the point. We fully agree that the approaches you suggest are the most effective way to defeat the pandemic. Most importantly your recommendations are applicable not only to the United States, but to other countries as well and we eagerly take them into consideration while planning our strategies here in my country of Georgia.
>
> I would like to use this opportunity to update you on COVID-19 situation in my home country of Georgia: The country quickly responded to this threat first by stopping flights with China in January, followed by more strict measures after the first case was diagnosed on February 26. These measures included national lockdown, active contact tracing, isolation and quarantine. The Government of Georgia appointed me to lead the National Committee on the clinical management

of COVID-19. Our effort to contain the spread of the virus had been effective so far with 296 cases of COVID-19 and 3 lethal cases reported up to now.

We are impatiently awaiting results of vaccine and therapeutic trials supported by NIAID, which I am confident will help to defeat this pandemic disease. On our side, Georgia is committed to make its modest but important contribution to the global efforts.

Sincerely,

Tengiz Tsertsvadze, MD, PhD
Director General, Infectious Diseases, AIDS and Clinical Immunology Research Center

Good afternoon Dr. Anthony Fauci.

After reading a lot of papers and studying basic science we have elaborated a treatment approach to the disease.

Tony,
I haven't wanted to bother you, but wanted to say thanks for all you are doing, and hope you are at least to a small extent finding a way to take care of yourself.
(b) (6) is hard at work at (b) (6) on a couple of coronavirus projects, so we're counting on him.
Of course any time you want to write something, our page is available.
Warmly,
Fred

Subject: Support for a "U.S. COVID-19 Response Corps"

Hi Tony,

Greetings from [redacted] (b) (6)

It's been good to see all the calls for ramping up a public health workforce to manage contact tracing and other aspects of the second phase of the response. I wanted to let you know that Peter Kilmarx has been calling for the formation of a "U.S. COVID-19 Response Corps" since March 21 (unrelated to NIH work). FEMA could hire thousands of temporary workers quickly with existing authorities and funding. CDC could provide training and technical assistance. The workforce would be deployed to and managed by state and local health departments at their request. There's a lot of enthusiasm for this from Jeff Duchin in Seattle, to Tom Frieden, CSIS, ASTHO, and 40 members of Congress (bicameral, bipartisan) who sent a letter to FEMA asking them to do this. The 7,000+ recently evacuated Peace Corps volunteers could be one recruiting source. Another approach is for CDC to fund state and local authorities for those who are able to hire at this speed and scale. There's more information in the string below.

This workforce issue is now such a critical part of the response, I wanted to share with you what we've learned and offer to help in any way.

Tony, all of NIH is so proud of your leadership and rooting for you to get this outbreak under control. Please keep up fight and let us know if and how we can help.

Warm wishes,
Roger

Subject: RE: COVID-19 Response Corps

Hi all,

Updates:

1. Johns Hopkins and ASTHO released "A National Plan to Enable Comprehensive COVID-19 Case Finding and Contact Tracing in the U.S." calling for 100,000 contact tracers. (Kudos!) "Potential workforce recruits may include . . . Peace Corps members." http://www.centerforhealthsecurity.org/our-work/pubs_archive/pubs-pdfs/2020/a-national-plan-to-enable-comprehensive-COVID-19-case-finding-and-contact-tracing-in-the-US.pdf
2. WaPo article: "A plan to defeat coronavirus finally emerges, but it's not from the White House" covers the JHU/ASTHO plan and notes: "Experts [CSIS] have proposed transforming the Peace Corps into a national response corps that could perform many tasks, including contact tracing." [Not quite accurate. Peace Corps would be unchanged, but the evacuated volunteers would be hired into COVID-19 response.]
3. NY Times editorial from Tom Frieden calls for a "giant public health effort." "Recruits could include Peace Corps volunteers who were brought home when the pandemic spread." https://www.nytimes.com/2020/04/12/opinion/cdc-coronavirus.html
4. Bill introduced by Sens. Susan Collins (R-ME), Chris Murphy (D-CT) and Dianne Feinstein (D-CA) would require federal agencies and departments facing special hiring needs during the pandemic to establish a process to expedite hiring of returned Peace Corps volunteers https://riponadvance.com/stories/collins-bipartisan-bill-would-ensure-benefits-for-evacuated-peace-corps-volunteers/
5. From March 29: Policy report from former FDA Commissioners Scott Gottlieb and Mark McClellan calls for "massively" scaling contact tracing. "Surge the existing public-health workforce to conduct case finding and contact tracing." https://www.aei.org/research-products/report/national-coronavirus-response-a-road-map-to-reopening/
6. Mark McClellan responded to my email yesterday: "I'd suggest adding outreach to mayors and county execs if that hasn't happened yet. They are really on the front lines for this next phase."
7. I understand legislation is in the works, but don't have details.
8. No news from FEMA or indication to my knowledge that they are planning a substantial ramping up of staffing.
9. A key limitation on the impact of contact tracing will be the relative importance of asymptomatic spread.

10. A note on serology: The current U.S. cumulative incidence is 0.169%. The specificity of FDA EUA Cellex test is 95.6%. Not accounting for undiagnosed cases, Positive Predictive Value is only 3.5%. If underdiagnosis is 10:1, the PPV is still only 26.8%. Will be higher in higher-risk individuals, of course.

Any other updates please send to me.

Advocacy needed for scaling up public health workforce especially with governors and mayors.

PK

Subject: RE: COVID-19 Response Corps

+ John Auerbach, president and CEO of Trust for America's Health

Thanks all for the robust discussion. Some updates:

1. ASTHO sent the attached memo to Congress today *RE: Contact Tracing Workforce* calling for "flexible long term and emergency supplemental funding to expand the . . . contact tracing workforce" at state, local, and related levels. It recommends against using FEMA for hiring. ASTHO notes that currently there are only 2,200 DIS nationwide while JHU estimates that 100,000 contact tracing employees are needed to address COVID-19 in the immediate future. The memo mainly calls for 1) $3.6 B *emergency* funding through the CDC Crisis Cooperative Agreement to eligible jurisdictions, plus 2) a $4.5 B *annual* Public Health Infrastructure Fund.
2. Resolve to Save Lives (Tom Frieden) is advocating for CDC to have the needed authority and political support to provide training, systems, and technical expertise, while the CDC Foundation and ASTHO provide staffing through direct assistance to health departments.
3. CDC could support curriculum development and training through the National Network of STD Clinical Prevention Training Centers https://nnptc.org/ and/or TB Centers of Excellence https://www.cdc.gov/tb/education/tb_coe/default.htm

My take: We share the goal of rapidly and substantially ramping up the public health workforce and should emphasize that message. It would be very challenging for any of these potential approaches to reach 100,000 in the short term. I don't have any special allegiance to FEMA, but their traditional role in emergency response is quickly hiring many thousands of workers. They are hiring now, but not at this speed and scale. CDC and FEMA should have an MOU through which FEMA can hire staff and detail to CDC , but they don't seem to be pursuing. One model could be FEMA detailing staff to state and local authorities to manage the hiring process. FEMA is proud of their ability to get people from "door to desk" in one week. This would not be "federalizing" contact tracing or other public health activities. In all cases, the invitations and the oversight would come from the state and local authorities, who are best able to decide what mechanism(s) work for them. Lastly, this concept includes more than contact tracing. Congresswoman Susan Brooks (R-IN) in her podcast Wednesday noted that the state 211 call line has gone from 2,000 to 25,000-35,000 calls per day. So this concept would still have a role even if not direct public health functions.

Thanks,
PK

Subject: COVID-19 Response Corps - CDC calling for public health army

Thanks Craig. This NEJM article is mainly about heath care workers, but does mention other roles in social support.

Important development: CDC's Bob Redfield is calling for a public health army for contact tracing after this acute phase:
https://www.npr.org/sections/health-shots/2020/04/10/831200054/cdc-director-very-aggressive-contact-tracing-needed-for-u-s-to-return-to-normal
It turns out that the Centers for Disease Control and Prevention has been working on a plan to allow the U.S. to safely begin to scale back those policies. CDC Director Robert Redfield spoke with NPR on Thursday, saying that the plan relies on not only ramped-up testing but "very aggressive" contact tracing of those who do test positive for the coronavirus, and ***a major scale-up of personnel to do the necessary work.***

I'm not sure CDC has the authority, capacity, or political support to hire an army at this time. This is a traditional FEMA role. CDC can provide training and technical assistance.

Subject: [External] RE: UPDATE: COVID-19 Response Corps

Welcome Marcus Plescia, chief medical officer of ASTHO!

Updates:

1. CSIS podcast "Coronavirus Crisis Update" with Congresswoman Susan Brooks (R-IN). She cosigned the CSIS OpEd with Ami Bera on the CRC and opens the episode with a discussion of engaging the returned Peace Corps volunteers https://www.csis.org/podcasts/take-directed/coronavirus-crisis-update-hunker-down-hoosiers-congresswoman-susan-brooks (This is a great series by the way.)
2. On Mar 27, 2020, Congressman Mike Quigley (D-IL-05) introduced the Mobilizing America to Help Act, "which would direct President Trump to invoke his existing authority to detail Peace Corps volunteers who have returned to the US from their posts, to the Federal Emergency Management Agency (FEMA) to support emergency relief in the wake of COVID-19." https://quigley.house.gov/media-center/press-releases/quigley-urges-trump-assign-peace-corps-volunteers-covid-19-emergency
3. Baltimore Sun column DAN RODRICKS, APR 03, 2020, "Put Peace Corps volunteers to work on U.S. soil to fight COVID-19": https://www.baltimoresun.com/opinion/columnists/dan-rodricks/bs-md-rodricks-0405-20200403-viqbgjhwsnhe3fuqzy72nfcsoe-story.html
4. Good conversations with Marcus @ASTHO and others today. Important to emphasize that state and local authorities have the lead. This would not be "federalizing" the response. It would be making federal employees available by request to integrate in state- and local-led activities. Some will welcome the extra hands. Some will prefer to have funding to do their own hiring. Paying salaries of state employees at risk for furlough to work on COVID-19 will make a lot of sense, but won't be enough. Need a menu of options.
5. Many concepts and plans for public health and social response are being circulated. All of them will need an expanded workforce.

Outreach:

6. I'm in touch with someone in Adam Boehler's office. Other outreach welcome.
7. I emailed Peggy Hamburg. No reply yet. Other outreach welcome.
8. Anyone who can contact Scott Gottlieb?
9. Here again is Monday's list: NGA and individual governors. Republicans who will be most interested and helpful are Baker (MA), DeWine (OH) and Hogan (MD). Democrats: Cuomo, Pritzker, Newsom, Whitmer, Inslee. AMA, ASTHO (done), APHA all good potential champions

Please amplify these links on social media.

Other updates and suggestions welcome as always. Send to me and I can send to others in a digest to reduce email traffic.

Thanks,
PK

Subject: UPDATE: COVID-19 Response Corps - FEMA challenges

Here's a report about a challenge I didn't see until this morning. I don't know if grants to state and local authorities would be quicker than federal hiring by FEMA. Either way, the workforce is needed, but will take longer than one would like.

https://www.nytimes.com/2020/04/03/climate/fema-staff-shortage-coronavirus.html
FEMA, Racing to Provide Virus Relief, Is Running Short on Front-Line Staff

WASHINGTON — The Federal Emergency Management Agency, the office leading the federal government's coronavirus response nationwide, is running short of employees who are trained in some of its most important front-line jobs, according to interviews with current and former officials.

At the same time, the agency has been forced to halt a major hiring initiative, and has closed training facilities to avoid spreading the infection.

The number of available personnel who are qualified to lead field operations has fallen to 19 from 44 in less than six weeks, and staff members have been pulled from responding to other disasters, but training centers in Maryland and Alabama have been shuttered until mid-May. In addition, an effort to recruit new employees called "Harness" is on hold, according to a senior administration official with direct knowledge of FEMA's operations . . . .

Craig Fugate, who ran the agency during the Obama administration, said FEMA's ability to deploy enough people was a significant challenge. "Can it be done? Yeah," Mr. Fugate said. "Will it be pretty? No."

Subject: NEWS: Bera-Brooks OpEd published in support of COVID-19 Response Corps

Welcome Vanessa Kerry!
Welcome Ariel Pablos-Méndez!
Welcome Gavin Yamey!

Hi all,

1. The OpEd is out on the CSIS website: https://www.csis.org/analysis/covid-19-response-corps-can-help-stop-pandemic It is co-authored by Congresswoman Susan Brooks (R-IN) and Congressman Ami Bera (D-CA), members of the CSIS Commission on Strengthening America's Health Security. Thanks very much to Steve Morrison for making this happen.
2. Here's the link to the press release on the 40-member letter to FEMA, Peace Corps, and CNCS from Senator Van Hollen:
    a. https://www.vanhollen.senate.gov/news/press-releases/sen-van-hollen-rep-phillips-lead-bipartisan-bicameral-letters-in-support-of-peace-corps-americorps-volunteers
    b. Includes link to letter: vanhollen.senate.gov/imo/media/doc/Peace%20Corps%20covid19%20service%20opportunties%20letter%2004.02.20.pdf

With this new, bipartisan OpEd, it's time to reach out to national, state and local authorities and opinion leaders to encourage implementation and create demand. Suggestions from one of us: NGA and individual governors. Republicans who will be most interested and helpful are Baker (MA), DeWine (OH) and Hogan (MD). Democrats: Cuomo, Pritzker, Newsom, Whitmer, Inslee. AMA, ASTHO, APHA all good potential champions.

Please also amplify on social media.

Updates and suggestions welcome as always.

Subject: UPDATES: Next steps on COVID-19 Response Corps

Thanks all for our call Friday. (Glenn, Jonathan, Craig, Jeremy, Roger, Anna, Suzanne, Eileen, Michael.)

A few items from the call:

- Jonathan reported Sen Markey's office working on legislation for 10,000+ (?) response workforce
- Michael reported positive response from National Governors Association
- Eileen reaching out to Tom Bossert. Adam Boehler not yet. Shared OpEd in WSJ emphasizing testing - https://www.wsj.com/articles/testing-is-our-way-out-11585869705
- Jeremy has an OpEd in Daily Beast with Beth Cameron – https://www.thedailybeast.com/coronavirus-shows-we-need-an-apollo-project-for-public-health
- Craig in touch with Durbin's office. IL has ongoing need for large workforce. Much easier to get staff from feds. Slower to hire at state level. MA implementing 1,000-person contact tracing effort.
- John in touch with Pelosi's office, DeLauro, Conf of Mayors, League of Cities.
- Other potential champions – ASTHO, APHA, Josh Scharfstein @JHSPH
- General agreement that for bipartisan emergency approval should emphasize near-term (e.g., 2 year) imperatives of COVID-19 and economic emergencies, not a new permanent work force.
- General agreement that Peace Corps is the low-hanging fruit, but not all 7,000 RPCVs would do this and the need is much greater.
- CSIS OpEd with Ami Bera (D-CA) and Susan Brooks (R-IN) coming out in Politico or CSIS website by Monday

Other updates:

- Telcon Friday with Brooks staffer. They are putting together legislation, ideally bipartisan with Bera. Now fully briefed on CRC concept and potential implementation model. Clarified not duplicative of USPHS Ready Reserve Corps which is now authorized but not being implemented (to my knowledge) and would be different profile, i.e., USPHS has physicians, nurses, engineers, etc.
- Telcon Saturday with CDC COVID-19 Chief Medical Officer. Confirms many are thinking about the workforce issue. Notes that CDC unlikely to "own," but great suggestion to engage CDC-funded National Network of STD Clinical Prevention Training Centers for training. https://nnptc.org/ with eight centers around the country. CRC concept may be brought to national response discussions with FEMA in Washington DC.
- FEMA contacts report they are hiring RPCVs, but do not report major speed up or scale up. FEMA recruiting email attached.
- Charles shared Vanessa Kerry OpEd emphasizing same themes: response workforce and jobs: https://www.bostonherald.com/2020/04/01/massachusetts-general-hospital-infectious-disease-team-calls-on-state-to-harness-people-power/

Next steps:

- Executive – support/impetus to FEMA to increase speed and scale
- Legislation – new appropriations for FEMA or CDC if needed
- National advocacy – media, opinion leaders
- Demand signal – state and local authorities requests
- Implementation and management details working out

Overall goal: Greatly increase COVID-19 response workforce to control disease and provide jobs. A COVID-19 Response Corps would be a (big) part of solution. RPCV ideal first cadre for CRC.

Please share any corrections, updates, suggestions.

Thanks,
PK

Subject: NEWS: Congressional letter to Peace Corps, CNCS, and FEMA on COVID-19 Response Corps

Hi all,
Big news. Herewith is a letter signed by 40 members of Congress asking FEMA, Peace Corps, and AmeriCorps to form a "COVID-19 Response Corps." This is now in the public domain. Press release forthcoming.

Please save the time for Zoom call 8 am tomorrow on next steps.
Also: Check out: https://www.npr.org/sections/goatsandsoda/2020/04/01/825231838/coronavirus-sent-peace-corps-volunteers-home-it-could-also-give-them-a-new-missi
The National Peace Corps Association is hoping to create and fund a group that draws on the evacuated volunteers and their skills to respond to the COVID-19 crisis in the United States. Workers would take on work like tracing the contacts of diagnosed individuals, monitoring the health of those in quarantine and staffing call centers. An agency such as the Federal Emergency Management Agency, the U.S. Centers for Disease Control and Prevention or AmeriCorps could potentially manage the group, says Blumhorst, who has been advocating for the project. Salaries could come from funding that's already been allotted to the COVID-19 response but hasn't yet been spent. The NPCA has discussed the idea with the offices of several members of Congress that are receptive and supportive, Blumhorst says, and they're planning to speak with more congresspeople and federal agencies and also hope to draw public attention to this potential project.

Subject: INFO: Update on COVID-19 Response Corps

Hi all and thanks for your support for a U.S. COVID-19 Response Corps engaging returned Peace Corps volunteers (RPCV). The latest (March 26) 2-page concept note attached.

Updates:

1. Steve is working on getting the OpEd out in press and/or on CSIS website by Tuesday. We'll let you know.
2. Glenn and Charles have found very good receptivity on the Hill.
3. I've had a couple very good calls with FEMA folks at senior levels (extensive RPCV network). They are already reaching out to RPCV and are well funded. They can get an RPCV on board in a week. They have a few different hiring mechanisms that would be appropriate. **The scale and speed need to be ramped up substantially.**
4. I've reached out to contacts at national mayors and governors associations with no reply. Also no reply from CDC (Jernigan and Schuchat).

Next steps – when OpEd comes out, amplify multiple levels to publicize and create demand.

The need for this is great. The feasibility looks very good.

Please share your suggestions.

Thanks to all,
PK

Subject: RE: Call - follow-up: COVID-19 Response Corps

Hi again,
A draft Op Ed attached. It is largely drawn from the concept note.

Is there an appropriate champion among us who can take this forward?

Please share your suggestions and comments by noon tomorrow if possible.

Thanks,

PK

Subject: RE: Call - follow-up: COVID-19 Response Corps

Thanks Charles. This is very helpful.

I've updated the concept note – attached. Now a two-pager. Added training and prevention bullet. Decreased the numbers and budget based on feed back to date. Draft OpEd forthcoming.

Grateful if others can advocate as they are able (and others of us are not).

Glenn – please add anything on your meetings on the hill yesterday, the FEMA call, or advocacy plans.

My takeaway is that a FEMA disaster corps or FEMA-Americorps Corps is feasible.

- Call yesterday with Glenn and former FEMA staff: George Haddow and Micheal Coen
    - FEMA Corps is a partnership of FEMA and Americorps with about 1,200-1,800 members. Part of Americorps. FEMA pays 100%. Mainly younger, lower-skilled supervised work.
    - FEMA reservist disaster corps has 3,000-4,000 members. Mostly shorter-term deployments as temp employees. Many retired military. Can be activated with State of Emergency declarations.
    - FEMA currently has sent 3-4 liaisons to each state. Disaster corps not activated.
    - Onboarding 5,000 would be a big lift. Peace Corps has seconded staff to other agencies in past, so this could be an option.
    - Only private sector partner for FEMA is Red Cross. Not recommended for this.

More input:

- Jen Kates (KFF) and her colleague Josh Michaud – "think it is a great idea"
- Tom Frieden -"It's a good idea."
    - Robynn Leidig, Manager, Strategic Initiatives, Resolve To Save Lives – "Compelling idea and worth exploring"
        - Concern about risk to RPCVs, training and oversight needed
        - Lack of PPE, best to focus on tasks that don't need PPE
        - Resentment of current staff worried about threat to their jobs
        - Fairness: should open to others - Americorps, VISTA, CDC PHAP, CSTE fellows, USAID Global Health Fellows
        - Management absorptive capacity limited at CDC. Consider ASTHO/ NACCHO or PHI.

>>
>> Glenn – good luck on the Hill today. Will be eager to hear about the reception.
>>
>> Some feedback from others:
>>
>> - John Monahan (Georgetown) – "Very creative, kudos!"

    - Try to get authority on one of these COVID-19 response bills for returning Peace Corps folks to be redeployed notwithstanding other provisions of law.
    - Explore whether CRC could be incorporated into the programs FEMA already has to bring in short-term employees to help with emergency responses.
    - Some functions (home-delivered meals, staffing call centers, homeless populations and shelters) would more sense to supplement programs run by Americorps.
    - Cost seems high.

- Scott Dowell (Gates Foundation) – "A good and important idea"

    - Need a massive surge in the public health and community testing workforce over the coming months.
    - They are considering engaging the 30,000 medical students through AMSA (American Medical Student Association).

- Tom Inglesby (Johns Hopkins) – "A fantastic idea and am very supportive"

    - Important issue to be worked through: How to address risk to individuals involved? (My response: training, equipping, and monitoring. Will add to next iteration of concept note. Note that Singapore has had no infections in HCW and in China after January/Wuhan, most HCW infections were from home, not from work.)
    - Tom's working on concept to engage presumably immune COVID-19 survivors (as was done with Ebola).

- Jeremy Konyndyk (CGD) – "Great idea."

    - Need to think creatively about how to expand the public health workforce for the coming 18 months, especially for tasks like contact tracing. We'll need to view CDC and local health dept folks not as boots on the ground but rather as force multipliers - sharing their skills with others and mentoring/managing larger teams to extend their reach.

Thanks for all your work on this, Peter!

Re LTCs--attached is a draft document listing all the capabilities that need to be in place for LTCFs to respond to Covid-19.

Developing and disseminating guidance aimed at LTCFs is relatively easy--the failures are going to be around implementation.

This is one area where assistance would be valuable.

Subject: [External] RE: Call - follow-up: COVID-19 Response Corps

Thanks all for our call and support for this concept. Please let me know any critical additions or corrections to these notes.

- Jeff Duchin (Seattle) noted multiple possible roles in contact tracing, mitigation with homeless and incarcerated, adverse consequences of social distancing, infection control support, alternative care site coordination, lab specimen collection and transport. He shared concerns about infection prevention and their PPE shortage. CDC had 40 people deployed, but they departed. Longer deployments (e.g., >90 days) needed to validate onboarding and training effort. He will follow up with more detail on potential roles and numbers.
- Angela Dunn (Utah) agreed with roles in contact tracing, also staffing a call center, rural outreach and specimen collection. She said Utah was not a current priority for FEMA and CDC was conducting a transmission study. She shared Jeff's concern about the onboarding effort.
- Cindy Burnett (Utah) mentioned the need for social support in rural settings.
- Craig Conover (Illinois) added that for them the long-term care centers and homeless populations were priority concerns. It would be feasible and helpful to have staff able to collect specimen swabs.
- Charles Holmes (Georgetown) made an analogy to community health workers in Zambia and how much can be accomplished and enhanced with tablet-based approaches, work-flow apps, and video instructions.
- Steve Morrison (CSIS) emphasized the importance of finding an organizational home, mentioning potential challenges for both CDC and FEMA. He noted timing of response packages being considered, the hunger for creative ideas, and urgency for this to be brought forward. He noted potential champions, listed with others below. He thinks the Peace Corps connection is a compelling factor.
- Glen Blumhorst (NPCA) expressed his support and insights on potential champions, e.g., three RPCV in the house. He is going to Capitol Hill tomorrow.
- Jody Olsen (Peace Corps) (prior to the call) expressed interest and noted that Peace Corps has no authority to operate in the United States. (The possibility of an Executive Order

detailing returned volunteers from Peace Corps to state and local authorities was mentioned by others on the call.) She also noted that Barbara Stewart, Director of CNCS (AmeriCorps and VISTA) has been inviting RPCVs to join.

Next steps:

1. Revise document (done, attached) to be shared with subject matter experts and potential champions. (There was not an exact delineation of who would share with whom. I will aim to CC: or ask for help with some contacts.)
2. Will draft Op-Ed in next 2 days.

Action: Share concept sheet with SMEs and champions avoiding any obvious minefields and duplication. Report back useful feedback.

SMEs/champions:

- Tom Ingelsby
- Beth Cameron
- Jeremy Konyndyk
- Rebecca Katz
- Scott Gottlieb
- Tom Frieden
- Scott Dowell
- John Monahan

Champions:

- Paul Allen Foundation
- Dick Durbin
- Biden campaign
- Chris Christie
- Carrie Hessler-Radelet
- Aaron Williams
- Patrick Leahy
- Chris Van Hollen
- Dick Durbin
- Debbi Birx
- Donna Shalala (RPCV – Iran 1962-64)
- Joseph P. Kennedy III (RPCV Dominican Republic 2004-06)
- John Garamendi (Ethiopia 1966-68)
- Aumua Amata (PC staff Northern Mariana Islands 1967-68)

Note – GS-7, Step 1 salary is $37,301, Step 5 is $42,273. I've re-set the budget at $100,000 per person to account for benefits, training, travel, per diem, management, evaluation, PPE, phones, laptops, etc.

Subject: COVID 19: Possible main cause of fatalities, it could be not respiratory

Good morning Dr Fauci,

I ve been following you on COVID briefings from the White House every night. I trust your experience, professionality and above all your wisdom in these weeks.

While I am a mechanical engineer and I run my food company fro living, I have been interested and passionate to the global fight to the Coronavirus.

SUGGESTION: Could it be possible that people die of **pulmonary micro thrombosis** rather than respiratory issues? If this is the case, this is more a cardiovascular issue than a respiratory, and ventilation or intubation do not count as much as, instead, to give patients some drugs to prevent the thrombosis, such as ANTI-INFIAMMATORIES. If you ventilate a lung where blood doesn't get there, may be it's useless! In fact 9 out of 10 die. If the problem were cardiovascular and not respiratory, then it could be a venous microthrombosis and not pneumonia that determines fatality. And why are thrombi formed? Because there is an inflammation that induces thrombosis through a complex but well-known pathophysiological mechanisms.

I know this thesis is right the contrary of some recommendations that several doctors all over the world (in China first) had made so far: no ibuprofene, no anthibiotics etc etc.
But I believe that some researches on the cardiovascular problem induced by inflammation would be worth doing it.

An apology for my English.
Thank you for your attention,

Stay healthy!
Kindest regards

Nicola

Subject: RE: Comparison of COVID-19 statistics in US vs. China

[redacted] (b) (6)

Thank you for you note. This pandemic has been extremely challenging for many countries around the globe including China and the USA. I can only say that I (and I am sure that Bob Redfield feels the same way) prefer to look forward and not to assign blame or fault. There are enough problems ahead that we must face together.
Best regards,
Tony

Subject: RE: Comparison of COVID-19 statistics in US vs. China

Dear Dr. Redfield and Dr. Fauci,

After some hesitation, I decided to write you this message anyway and hope you don't mind.

I am concerned about the recent fight between the US and WHO because it may adversely impact the current global efforts in controlling the spread of COVID-19. As we all know, US has been leading WHO's efforts for decades and essentially WHO's role is mostly coordinating responses in low- and middle-income countries with support from the US and other high income countries. Frankly I was looking for leadership from the US CDC rather than WHO when I was doing [redacted] (b) (6). Until COVID-19 is controlled in all countries, the infection could come back to hit us in this country again. Therefore it is now the worst time to undermine WHO's global coordinating capabilities.

What I learned from my former colleagues and friends in [redacted] (b) (6) where I attended medical school and obtained my MSc in epidemiology might offer some explanation for the differences in COVID-19 statistics in US vs. China. Please find attached a couple of articles published by my former colleagues [redacted] (b) (6), of which the 1st attachment is a more updated version.

- First, the maximum lockdown in Wuhan that started on January 23 and also in the rest of the entire Hubei province of 59 million people during the subsequent 2-3 days, coupled with maximum efforts in early identification, immediate isolation of identified infected individuals and close monitoring of contacts, did work and had to work according to epidemiological principles. China did it by invoking level 1 public health response that was historically reserved for smallpox, plague or cholera, which essentially enabled the entire country to be completely locked down for several weeks. Many villages and townships set up checkpoints to refuse anyone to come in or go out; a driver from Hubei had to stay on an inter-provincial highway for 20 days surviving by begging instant noodles from people policing exits; all front doors of residents in a township in Hubei were sealed by local government officials and volunteers to prevent them from getting out of their houses.

- Second, there must be under-reporting of COVID-19 cases and deaths because the public health and hospital systems in Wuhan and a few other hardest hit municipalities were overwhelmed for one to two weeks; conceivably many infected individuals were not getting a chance for testing and some of them must have died without being identified as COVID-19. I'd say that this kind of under-reporting is unavoidable, especially in the epicenter of a new pandemic. Actually I suspect that such under-reporting could have happened in this country as well although perhaps to a lesser degree.
- Third, there could be a third category of casualties, that is, patients who were suffering from chronic diseases but couldn't get necessary treatments because hospitals were overwhelmed. I read a sad story in social media in which a patient who needed frequent dialysis committed suicide by jumping out of his window. It is highly likely that many such patients died during the lockdown even though I couldn't confirm the specific case or find any statistics. There could be many other collateral damages including socio-psychological effects.

Combined, the effect of the maximum lockdown, the under-reporting of COVID-19 cases and COVID-19 deaths as well as collateral deaths of other causes that were associated with the lockdown could be several times of the reported statistics from China. Here I'd not say that China purposely under-reported COVID-19 cases or deaths but rather, China pursued an extreme approach and achieved an extreme result, including severe collateral damages. Of note, Dr. LI Wenliang (the whistleblower) voiced concern on 12/30/2019 and was criticized for having not followed the legally proper reporting process but nevertheless the WHO China Office was informed on 12/31/2019 of a pneumonia of unknown cause, detected in the city of Wuhan in Hubei province, China (https://www.who.int/emergencies/diseases/novel-coronavirus-2019/events-as-they-happen).

We in the US and many other countries pursued different approaches, which are more humane but less effective in terms of blocking transmissions. This is the reality, which needs to be communicated with and recognized by the public; to make the humane approaches work as effectively as possible, we need everyone's support and cooperation, which cannot be achieved by blaming China or WHO. The public has to understand that we are in a pandemic, which means that tens of millions are supposed to be infected and millions are supposed to die from it, unless we take necessary actions to block the transmission and to take good care of the infected.

Finally, I'd like to say a few words for public health colleagues in China. In my personal view, to be fair, they have done their best to inform the global public health community of the COVID-19 outbreak in Wuhan, China by briefing WHO and many countries as soon as they identified COVID-19 (12/31/2019 – 1/3/2020); they shared the genetic sequence of the virus on 1/12/2020; and the number of scientific and medical publications in English shortly afterwards was unprecedented. I did a brief search and identified the following:

A Novel Coronavirus from Patients with Pneumonia in China, 2019 (1/24/2020)
https://www.nejm.org/doi/full/10.1056/NEJMoa2001017

A familial cluster of pneumonia associated with the 2019 novel coronavirus indicating person-to-person transmission: a study of a family cluster (1/24/2020)
https://www.sciencedirect.com/science/article/pii/S0140673620301549?via%3Dihub

Clinical features of patients infected with 2019 novel coronavirus in Wuhan, China (1/24/2020)
https://www.thelancet.com/journals/lancet/article/PIIS0140-6736(20)30183-5/fulltext

Early Transmission Dynamics in Wuhan, China, of Novel Coronavirus–Infected Pneumonia (1/29/2020)
https://www.nejm.org/doi/full/10.1056/NEJMoa2001316

Genomic characterisation and epidemiology of 2019 novel coronavirus: implications for virus origins and receptor binding (1/30/2020)
https://www.thelancet.com/article/S0140-6736(20)30251-8/fulltext

A new coronavirus associated with human respiratory disease in China (2/3/2020)
https://www.nature.com/articles/s41586-020-2008-3

Early estimation of the case fatality rate of COVID-19 in mainland China: a data-driven analysis (2/12/2020)
http://atm.amegroups.com/article/view/36613/html

Characteristics of and Important Lessons From the Coronavirus Disease 2019 (COVID-19) Outbreak in China (2/24/2020)
https://jamanetwork.com/journals/jama/fullarticle/2762130

It is my hope that US and China could join forces to help low- and middle-income countries to control the pandemic so that it will not come back and hit us again after the current wave in this country is controlled.

I am not sending this message through the official channel because this is not part of my official duty and is purely my personal opinion.

Sincerely,

(b) (6)

Subject: [COVID-19 Pneumonia] Official Letter from ImmuneMed Inc.

Dear **Dr. Anthony S. Fauci**,

My name is Sungpill Park, and I'm a representative of ImmuneMed, Inc. located in Korea.

We specialize in diagnosing and treating the infectious diseases.

Our company's **hzVSF(humanized Virus Suppressing Factor) v13** is under curable usage for COVID-19 pneumonia, utilizing Korea's compassionate use system for patients who do not have an alternative treatment.

I am writing with a strong conviction that the partnership between **the National Institute of Allergy and Infectious Diseases** and ImmuneMed, Inc. will bring the decrease of death rate for COVID-19 pneumonia.

I ask you humbly to please spend a minute of your busy time reading the attached letter from our CEO, Dr. Yoon-Won Kim, to find out more about the hzVSF treatment and how we can work together to cure COVID-19 pneumonia patients.

With Regards,

Sungpill Park, MBA
Vice President, Global Business Development
ImmuneMed, Inc.

Subject: RE: NAS Annual Meeting Session on COVID-19 -- Information regarding your Saturday April 25 participation

Dear all,

Thank you for agreeing to participate in a special late breaking session on the COVID-19 pandemic at the NAS annual meeting. Knowing how busy you are, I am sending this email in lieu of a call to prepare for the session.

As you know, this is a 90 minute session which aims to provide our audience with deeper insights into the latest developments in the COVID-19 response. I plan to hold an engaging discussion that covers the whole experience on dealing with this pandemic – from US to international, to preparedness and response, the biology of the virus, the state of diagnostic, treatment and vaccine development, and the importance of communication.

I will begin the session by providing brief (~3 min) opening remarks describing the circumstances of the pandemic. Then, I will introduce the panelists and you will each have 7 minutes to provide remarks. You may use a limited number of slides for illustration. I hope that each panelist will provide their own perspective and speak to the issues proposed below.

- Jeremy Farrar will discuss the global response to the pandemic, drawing from his experience as a global leader, the chair of the Scientific Advisory Group for the WHO's R&D Blueprint and as a member of the Global Preparedness Monitoring Board.

- Tony Fauci will discuss the US pandemic and provide his perspective as a member of the White House Coronavirus Task Force addressing the 2019–20 coronavirus pandemic.
- George Gao will discuss China's response to the pandemic and lessons learned for the rest of the globe.
- Susan Weiss will discuss the viral characteristics of SARS COV2 , insights into its pathobiology, immunity and development of a pan-CoV antiviral.
- Richard Hatchett will discuss the development of new vaccines and treatments against COVID-19.
- Sanjay Gupta will comment on the health system response to the pandemic and challenges related to communication and public engagement in responding to COVID-19.

Following remarks from each panelist, we will have a moderated discussion amongst ourselves – I will ask you a set of questions (15 mins) and then we will take questions from the web (25 mins). To prepare me to be your moderator, please send me any questions you would like me to ask you. For those of you who would like to have a prep call, please let me know and I will set it up.

Best,
Victor

Subject: NAS Annual Meeting Session on COVID-19 -- Information regarding your Saturday April 25 participation

Dear Speakers:

I am the logistical contact for the COVID-19 session that will be held as part of the Annual Meeting (online) program on Saturday, April 25 at 2:00 pm EDT. Thank you for agreeing to participate in this session. To help you with your planning, I have provided additional details below.

Please note that the session will be live webcast and the general public will also be able to watch the session. Video from the session will also be uploaded on the NAS YouTube channel (https://www.youtube.com/user/theNASciences) after the meeting. We will need to obtain signed speaker release forms for your participation in this session. I have attached the speaker release form for your review and submission. **Please return the signed speaker release form by Monday, April 13.**

Session speakers are asked to connect 30 minutes prior to the session start time (**by Saturday, April 25 at 1:30 pm EDT**) to allow the technical staff to check connections and prepare for the session. Details on how to connect will be sent before the meeting.

We will list you in our promotional materials as noted below. If this is incorrect, please let me know.

Anthony S. Fauci, Director, National Institute of Allergy and Infectious Diseases
Jeremy Farrar, Director, Wellcome Trust
George F. Gao, Director-General, Chinese Center for Disease Control & Prevention
Sanjay Gupta, Chief Medical Correspondent, CNN
Richard J. Hatchett, CEO, Coalition for Epidemic Preparedness Innovations
Susan R. Weiss, Professor of Microbiology, Perelman School of Medicine, University of Pennsylvania

Since many of us have moved to remote work environments, you may already be proficient with Zoom and other online meeting/collaboration applications. I am attaching a 'speaker guidelines' file in case you have any questions on how best to prepare for and stage your remote talk. We have technical staff available to help you become familiar with Zoom and its settings – such as "sharing your screen" (if you have slide presentations that need to be shown during your talk). We can arrange for a training session this week or next week. If you would like to schedule a session, please let me know as soon as possible.

Dr. Dzau's office will be in touch regarding the agenda for this session. If you have any other questions, please let me know.

Regards, Jenny

Hi Tony: You are doing an amazing job during these very difficult times!

Doing everything we can here to support WHO to work on global acceleration of SARS-CoV-2 vaccine development as well as support our 73 poorest countries for COVID-19 preparation and hopefully keeping routine vaccine coverage as high as possible. We are prepared to ultimately roll out a vaccine when one is ready. No need to respond, but wanted to give you a friendly shout-out. We are all thinking of you!

Best,

Seth

Vol. 230 April 1, 2020 Biden Picks His Running Mate

Press Conference

Former Vice President

Joe Biden

April 1, 2020

(Official Transcript)

BIDEN: Good morning everyone. I am glad to see all you reporters sitting 6 feet from each other. I know it is burdensome, but we must work together to defeat this awful Zika. . . Rebola. . . the flu . . . er, what?, . . . I mean, you know, the Coroner virus.

Speaking of the current virus crisis . . . boy that has a nice ring to it, doesn't it? . . . it almost rhymes . . .I would like to announce my pick of a running mate; Dr. Anthony Fauci, Director of the National Institute of Allergy and Infectious Disease of NIH since 1984. . . almost twenty. . . er. . . many years ago.

Now before I start to answer your questions, let me give you some reasons for my choice.

Number 1: Dr. Fauci is smarter than I am, but I am taller and younger than he is.

Number 2: He is very experienced. He has worked with many Presidential administrations since he came to Washington . . . in the 1980's as I remember. He told Ronald Reagan about the AIDS epidemic, advised two Bushs . . . one of them gave him the Presidential Medal of Freedom . . . by the way, Ben Carson got his medal during that same ceremony, . . . where was I? Oh, yeh . . .two Clintons . . . yes two, remember Hilary's Health Care Plan?. . . and, of course, Obama or two.

Number 3: He gives very good TV interviews, even on Fox News with Sean Hannity trying to mislead the viewers.

Number 4: His medical training has given him that special skill that all physicians must have to succeed — "Always sound right, and if you don't know an answer, make one up." But he is like one of my famous namesakes on Dragnet . . . Sergeant Joe Friday . . ."Just the facts, Ma'am."

Now I'll take your questions.

[Sounds of shouting, general loud babbling, a baby crying, a chair falls over]

REPORTER: " Mr. Biden have you moved away from your promise to pick a female running mate?"

BIDEN: Did I say that? When was that? . . . Oh, it was during one of those debates? . . . I wouldn't call it a promise. It was a statement from which I am now socially distancing myself, and that makes it a very timely question. . . .This social distancing is for the pits. I haven't smelled a good head of hair in weeks. . . for the record, my test was negative . . . and I will ensure that women's voices will be heard in my administration by appointing several to my cabinet. Elizabeth Warren naturally will be Secretary of the Treasury. Kamala Harris as an experienced prosecutor would be an excellent head of the Department of Justice . . . I think she is Latino too, isn't she?. . . I am not sure about Senator Amy Kolbuchuck from Minnesota and she has great hair, but Marianne Williamson, . . . remember, the physic healer. . . could serve as Chief of the Alternate Universe . . .excuse me, Alternate Therapies within HHS. Adding Senator Gillibrand to the cabinet would weigh the group too heavily towards New York, since Dr. Fauci is from Brooklyn. I will, of course, appoint Tulsi Gabbard as Ambassador to America Samoa.

REPORTER: "Do you have any concerns about any regrettable incidents in Dr. Fauci's past?"

BIDEN: Not really. My staff has vetted him very thoroughly. The only whiff of scandal we found was his medical school yearbook picture where he was being lifted by two of his taller classmates so as to appear as even taller than they. None of them were in black face.

Also some people may have difficulty knowing how to pronounce his name correctly. It is pronounced as "Fow-chi" with the soft "c" sound common to many Italian names, . . . and as the Senator from Nevada I wish to say that I have many Italian-American friends who are hard-working, decent citizens, but I must excuse myself from this Corleone hearing for another important committee meeting . . . oh, sorry . . . was I channeling the Godfather again?. . . a great movie.

There is another small concern, since he is from New York City and his name ends in a vowel people may think he is associated with Rudy Giuliani. . . . but we know that he is taller than Mike.

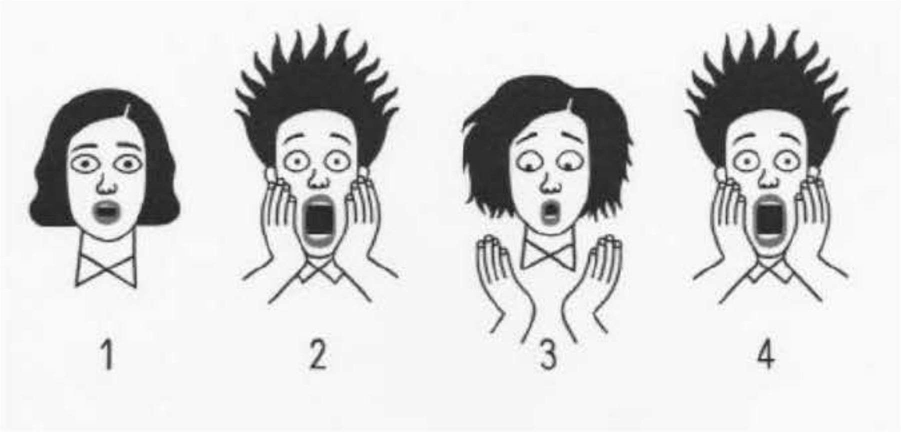
We have completely debunked the New Yorker Magazine stories that Dr. Fauci has recommended internal alcohol to kill the coronavirus since external alcohol really doesn't work. In fact, he only recommended it as an antidote to the daily briefings of the White House Coronavirus Task Force. Dr. Fauci also noted that internal alcohol effects may be briefer than the briefings, so viewers may repeat a dose PRN (as necessary).

REPORTER: " Is it true that as noted in your background Press Release just handed out that Dr. Fauci was born on Christmas Eve, and are you concerned about any back lash from Trump supporters who regard Trump as the Second Coming."

BIDEN: Dr. Fauci is an American. Even though he was born in Brooklyn, there is no question about his citizenship eligibility for this office. I think that a resurgence of the Birther Movement which was so viscously directed at my close friend and mentor, Barrack Obama, . . . there I finally got his name out there. . . would be very unfortunate. Next question.

REPORTER: "Has Dr. Fauci made any significant contributions in fields other than virology and infectious diseases."

BIDEN: Well let me tell you a down-to-earth, fascinating story of one of his most significant contributions. It will be a short one, I promise. Since the Coroner virus pandemic has taken over all the headlines, editorial pages, social media memes, political cartoons, TV shows, graphic artist shops, and a lot of other things swamping articles about the Opioid Deaths epidemic, Dr. Fauci has developed a new attention-getting graphic to replace the familiar 1-10 faces of pain levels; the 1-4 faces of Pandemic Panic levels.



REPORTER: "But face 4 is the same as face 2. Isn't that a confusing message."

BIDEN: Exactly

"Thank you Mr. Biden, and **Happy April Fools Day.**"

Dear Tony –

I know you are overwhelmed, but the attached whitepaper on a vaccine-development idea might be worth a look. You may member Chad Mirkin as a member of the Obama PCAST whose extraordinary contributions across a range of science and engineering issues have landed him in the NAS, NAE, and NAM, among other distinctions—a very smart guy.

Aside from that, thank you for your courageous truth-telling in the incredibly demanding situation in which we find ourselves.

My best,
John

Hi Dr. Fauci,

I thought I would reach out to you amidst this crisis; I respect the work you're doing a great deal. (b) (6) Hani El-Gabalawy, did a research sabbatical at NIH (b) (6)

Amazing work that you're doing. I've been following your discussions and scientific innovation regarding COVID-19. I've been working for the federal government in Intelligence for about thirteen years and recently moved to the Canadian Public Health Laboratory Network Secretariat to support the Emergency Operations Centre at the National Microbiology Lab. I've been with the NML for almost my whole career.

Just a quick hello and deep respect for your work. My colleagues and Director have said that we're on the exact same page as you, in terms of your perspective and assessment of the pandemic. Although there is a border between us, know that we are in agreement with your work and I'm thrilled to see you advising the public. There is no better person to do the job.

Kindest regards,

Nadia El-Gabalawy

Dear Tony,
I'm lucky to have thoughtful neighbors. Please see the email that I received from Sue Edwards. Because of the likelihood that there are so many asymptomatic cases, isn't it time to recommend everyone where a mask of some kind? Not N95 masks or even surgical masks that should be reserved for first responders and hospital staff, but some face covering?
Best, Brian

>
> Why can't the CDC make a public service announcement that everyone should be wearing some kind of mask 😷 in public? It doesn't have to be N95 or even surgical though that would be ideal (as is done in every Asian country) given that the virus is actually aerosolized (several studies confirm this) and that it can be spread by asymptomatic carriers (which account for possibly more than half of the positive cases - we will never know) it seems obvious that food markets are no different from hospitals and in many cases worse since at least in hospitals people are wearing some protective equipment... just say wear a cotton mask, a scarf, a bandanna, a DIY paper towel mask.. whatever- but no one should be going to a market without one and absolutely no one working in a store or stocking supplies or delivering food, packages, mail etc should be allowed to work without something covering the face- this includes pharmacists as well, obviously □ wtf is wrong with this country?
>
> What use are gloves? When the offending particles are escaping our faces and floating around for several hours, landing on everything around us... the only place it shouldn't be as critical is outdoors in the sunshine where UV light should deactivate viruses fairly quickly...

Sue

Hope you are all well - and can give me some hope that this message get through the thick skulls of the so called experts... even during the 1918 flu epidemic, everyone wore some facial covering when out in public places - what is going on?

EVERY ASIAN country is employing this approach with much greater success at slowing the rate of transmission — even India!

Hi Toni,

You continue to be "the role model" for leaders in biomedical research these many decades. I am so proud of your efforts during these remarkable times in history. Thank you!!! I cherish those 5 years (1995-2000) that I served as Director of NIDR (that became NIDCR) when we were able to co-sponsor efforts to utilize saliva as an informative fluid for HIV detection. For me that was an invaluable opportunity to be part of

Harold Varmus' leadership team and to continue my research within NIAMS.

I was inspired by your public comments a few nights ago on CNN regarding your observations of significant variance in the pathogenesis or phenotypes noted for subsets of critically ill patients with COVID-19 on ventilators in ICU. I was immediately reminded of David Feinberg (CEO of UCLA Health Sciences, more recently 5 years at Geisingers, and currently CEO of Google Health Companies) who used genotyping for populations around Lancaster PA and discovered about 3-4% with undiagnosed genetic diseases that translated into reduced costs of hospitalization, treatments, etc. Kaiser-Permanente Northern California, and many other systems, have also used this approach since sequencing has become cost effective. Perhaps a select sample of people who require ICU, and another that require ventilator, might inform the genotype of the most susceptible people and might also inform a target to use to discover what existing drug or therapy could be mobilized. Through your position, might there already be a large data set of whole genome sequences (e.g. military) that could be rapidly explored using bioinformatics?

As you may recall, my personal research activities have focused on craniofacial diseases and disorders. For example, Osteogenesis Imperfects (O.I.) presents cardiopulmonary disorders in addition to bone and tooth disorders. Since penetrance varies, cases of rare conditions can illuminate “hidden” SNP abnormalities in key gene clusters (e.g. MHC gene clusters, etc.). Considering lung disorders as you mentioned in your comments about pathogenesis, already known gene mutations that present several major phenotypes including pulmonary diseases could become very useful. Perhaps Francis and others at the NIH could create a trans-NIH approach that is enabled to visit this pandemic from the perspective of human phenotype variance discovered via genomics?

I asked Martha Somerman to explore the talents available at NIDCR (and beyond) related to connective tissue genetic diseases that associate with Types 1 and 111 collagens, elastics, and hyaluronic acid glycoproteins AND lung tissue fibrosis, etc. She may also reach out to you.

Meanwhile, thank you for your untiring efforts to use science to inform health policy. Of course, let me know if I can be of any use to you.

Always, Hal

To: Nader, Ralph
Subject: RE: COVID-19 Question

Ralph:

I am so sorry that I took so long to get back to you. I receive over 1000 e-mails per day and even with staff screening, I do not see them for days. There is still an issue/problem with serologic tests in that they need to be validated as being sensitive and specific. Many tests that have been used thus far are not accurate and ARE MISLEADING. The UK bought millions of these from China and found that they were inadequate. The FDA is in the process of validating certain tests this week and if they pass, then we can expect to have tests within the next few weeks to do the things that you have suggested.
Best regards,
Tony

Subject: COVID-19 Question

Dear Dr Fauci,

I hope this email finds you well.

Thank you for everything you are doing for our country in these difficult times.

I realize your time is extremely valuable - especially during these times.

I have one question - if you can help me answering it.

Why are serologic tests not made abundantly available during these times?

This will help in so many ways:

- Can it be used to triage healthcare workers? Naturally "vaccinated" healthcare workers may be better triaged to be on the front lines for example, taking care of COVID-19 patients. (In times of limited PPE, documentation of natural immunity is probably one of the best PPE's out there)

-Another major use for it:

People can be asked to remain home, until they have documentation of natural immunization.

Serologic tests are very cheap, can be mailed, and done at home.

Immunized individuals can carry the test as "proof" of immunity - and may be able to go back to work etc.

It is just a thought. It may be a very candid question that I am asking.

But while we are waiting for a vaccine (and this will take several months), some people may be able to benefit from a very cheap test (that can be done at home) to short-circuit that waiting time.

Thank you for everything you are doing to our country,

You are such an inpiration to us all.

I wish you all the best.

Thank you.

Subject: ASF: documentary interview request: PBS + Topspin Productions

We have received a request from the PBS program "American Masters" and Topspin Productions to do a documentary about you. Their near-term ask is one or two brief video-link phone interviews during the next few months. After the coronavirus pandemic has subsided, they would like to do "a proper sit-down in which you could tell us the stories that speak to the key moments in your remarkable career."

On the face of it, this might seem to overlap with the Tobias/Hoffman project, but in the end I think they'd be quite different products. Please let me know if you'd like us to seek clearance to proceed.

On Apr 7, 2020, at 9:26 AM, Lia Carney <lia@topspincontent.com> wrote:

Hi Laura,

Nice to speak yesterday. See below for formal request and information about the series. If you wouldn't mind confirming receipt of this email, I can make sure to let me partners in this project know it is in the correct hands. Stay safe and thank you.

Dear Dr. Fauci,

To re-introduce myself, I am Lia Dosik Carney, [redacted] (b) (6) and an executive producer in Los Angeles. As you'll remember, we filmed with you last summer as a major participant in a documentary we were producing centered around infectious disease. Thank you again for participating and taking the time. It was great to hear about your extraordinary career as well as a few interesting stories about [redacted] (b) (6)

Obviously events have taken over all of our lives. Like everyone else in this country, I am very grateful for your honest and steadfast leadership as we navigate our new reality. During this time, we've been rethinking how we want to proceed with our documentary and have come to realize focusing on you, your experiences over the decades, how you have met every challenge presented to you, would give all of us a roadmap for the future.

To that end we are now in partnership with AMERICAN MASTERS, PBS' flagship series that profiles and honors outstanding Americans. Together we would like to produce a comprehensive look at your life, your experiences and your insights into how to deal with the recurring diseases that continue to plague our lives.

I have included below an introductory email from American Masters Executive Producer, Michael Kantor, which will give you a broader sense of that exceptional PBS series and the extraordinary work they produce.

We all know how limited your time is now — and all of us are so appreciative of what you are doing. We respectfully hope you will allow us to chronicle your life in medicine. We know that as we emerge from this latest crisis — understanding how you were able to deal with earlier plagues (HIV-Aids for instance) will — we hope — give all of us a better understanding of the challenges all of us will continue to face.

Appreciate your consideration. With respect, Lia

Dear Dr. Fauci,

My name is Michael Kantor and I am the Executive Producer of the PBS AMERICAN MASTERS series. I believe you know [redacted] (b) (6) I am writing today to see if you would allow us to make a film on your life and career. We would require very little of your precious time right now, perhaps one or two very brief video-link phone interviews over the next few months, just as you have appeared on Trevor Noah's *The Daily Show* and spoken with basketball star Steph Curry. Later this year, after the current crisis has subsided, we would find time in your busy schedule for a proper sit-down in which you could tell us the stories that speak to the key moments in your remarkable career.

I am excited to work with Lia Carney and Topspin Productions on this project, because it has been important to me to expand the roster of AMERICAN MASTERS films to include scientists. Over its 33 year history, our series has profiled artists such as Leonard Bernstein, Maya Angelou and Raul Julia, athletes including Billie Jean King and Ted Williams, and now we are presenting the stories of James Watson and Oliver Sacks in our pantheon of great films. Our series is dedicated to telling biographies with the utmost care, and for that reason we have been honored with awards like the Emmy, the Peabody, the Grammy and even an Oscar.

We would be honored to have you join us in our public television effort to educate Americans about the domestic and global health issues that have been the focus of your career. This letter is brief because we respect your time, but we sincerely hope that you will join us in creating a documentary of distinction for a broad and diverse national audience.

Sincerely yours,

Michael Kantor

Dear Professor Anthony Fauci and Professor Kami Kim,
Greetings from Pondicherry, India. This is Dr K Neelakantan Viswanathan, Senior Professor of Medicine in a medical school here.

Going through your excellent chapter, (Chapter 197) in page 1445, on AIDS and related disorders in HPIM-20, under secondary prophylaxis / maintenance therapy for Toxoplasmosis it is said that **"it may be discontinued in the setting of effective cART and increases in CD4+ T cell counts to > 200 / microliter for 6 months".**

In page 1615, another wonderfully written chapter, (Chapter 223) on Toxoplasma infections, Professor Kami Kim has mentioned that " **individuals who have completed initial therapy for TE should receive treatment indefinitely unless immune reconstitution with a CD4 + T cell cont of >200 occurs as a consequence of cART".**

Since both feature in the same textbook followed worldwide by medicos, could you please clarify the above?
I stand subject to any corrections.

Hoping that we fight Covid-19 effectively very soon. Stay safe.

Regards and best wishes,

Professor Dr K N Viswanathan

Tony, Thank you for the immense 24/7 contribution you are making to our nation. Your wife is right: Pls get more sleep and meals! Before Easter tomorrow I am sharing this brief Old Testament story to which I gave a 2020 interpretation. Today's IDSA posting I am emphasizing that simultaneous antibody and virus RNA tests should be done on "relapsed" or "reinfected" Covid-19 patients e.g., South Korea (N=91), China, elsewhere. I am looking forward to giving NIAID Grand Rounds May 1st with Barney Graham and John Beigel. Dan [redacted] (b) (6)

Coach K and I came to duke on the same day in 1980 and [redacted] (b) (6) ...when I was chair and he wasn't quite so famous, he used to see all my division chief recruits and help me recruit. He is a really good guy, as you know.

Am on the francis Collins-appointed NIH working group for COVID19 vaccines, first meeting in the am...

Will continue to flog CoV2 simultanelously while making good progress on HIV. This past week had 4 HIV SABS, CHAVD, an IPCAVD, an HIVRAD we have with Scripps, and our GMP unit.....all on line. Not messing around.... All went really, really well.

Thanks for all you continue to do.

Best bart

Subject: FW: Serosurvey

Hello Dr. Fauci,
I hope you are staying well in these trying times.

I'm writing to request a chance to embed with a team doing a coronavirus serosurvey, to tell a public health story from the front lines as I believe I'm uniquely positioned to do. I've made a similar request to the CDC, but the nationwide reach of the NIAID serosurvey might make my proposal easier to consider, so I'm coming hat in hand to you as well.

Twenty years ago, as a temporary CDC employee during a four-month Knight Journalism fellowship, I had the opportunity to take the EIS course in Atlanta and then work on several CDC outbreak and disease investigations. One was a serosurvey on Long Island after West Nile virus had recently emerged in the U.S.
I headed one of a dozen CDC teams that included a driver, a phlebotomist and a health aide from the New York state and Suffolk County health departments. We went door-to-door to consent participants, get blood samples and do interviews on exposure and symptoms.

I appreciate the tremendous scientific value that serosurveys offer and the kind of attention to detail and study rigor that's needed to get reliable information. I'm also a longtime medical journalist who understands and is sensitive to confidentiality, ethical and privacy concerns. I've been recognized by my peers as a science writing leader.
https://casw.org/casw/article/marilynn-marchione-associated-press-wins-victor-cohn-prize

I've attached some letters from CDC and other health officials regarding my work on the serosurvey, a photo of the EIS and CDC team (that's me toward the right in the front row) and the MMWR report resulting from our work. The field supervisor -- Dr. Anthony Marfin, now with the global vaccine group PATH ((b) (6) is willing to speak to you on my behalf. Dr. Richard Besser, now president of the Robert Wood Johnson Foundation, was my fellowship supervisor and mentor at CDC. Others I worked with include Dr. Anne Schuchat, Dr. John Ward, Dr. Robert Tauxe and Dr. Lyle Petersen.

And of course, you know me from nearly three decades of medical writing, including the HIV/AIDS government trip to Africa when Tommy Thompson was healthy secretary.

The Associated Press reaches half of the world's population every day. I hope to offer a story that I and the AP are uniquely able to provide, to show and explain how public health is done and how science is accomplished during a pandemic. Thank you for considering my request.

Dr. Haynes,

I'm a reporter from the Wall Street Journal and, more important, a friend of Ben's from Duke. I've written quite a bit about your mentor and friend Dr. Fauci in the last few weeks, and I'm working on another story now that I was hoping you might be able to help with.

This story is about *his* mentor, Dr. Wolff, and how Dr. Wolff helped turn Dr. Fauci into the person he is today. I would love to hear more about their relationship from your perspective. I know this is an insanely busy time, but would you have a few minutes to chat by phone?

Thanks very much for your help. I hope you're safe and well in Durham.

All best,
Ben

Subject: THANK YOU

Thank you Dr. Birx and Dr. Fauci:

At a time when America needs it most both of you have courageously stood at the podium at the White House press briefings and explained what we all need to be doing during this paralyzing COVID-19 pandemic. When others have failed to lead, multiple task forces have struggled prioritizing safety first before economics, both of you have tag teamed presenting the data and the analytics of COVID-19 by decoding its complexities and giving us the "honest truth" in language that is easy to understand. The virus will end when it ends and not before. Thank you both for your service to the nation and for doing your jobs with conviction and commitment in doing the right thing - sticking to science and not yielding to politics. America is immensely grateful for both of you telling us all what we need to hear and what we need to do. You are both giants in the world of medicine.

Very appreciative,

Neil Lacey

Dear Mr Fauci,

We are really wondering over here in Europe why you don't take a dedicated opinion on COVID-19 and share your opinion at the daily briefings to the extent of your personal believes.

We really expect you to oppose the president wherever you have a different opinion, which we believe is based on facts.

Please consider our request and don't let the president keep spreading his lies to the people of the United States.

We would really appreciate watching you on the briefings telling the nation the truth that is based on your experience straight to the point.

Thank you so much,
Daniel Kölliker and acquaintances

[redacted] (b) (6)

Dear Dr. Fauci:

I write simply to thank you and congratulate you for your incredible efforts during the management of this pandemic as it reaches across our nation. The unique challenges that this pandemic has created have also created opportunities, and we here at the University of Nebraska Medical Center have proudly participated with our federal, state and local partners during this COVID-19 pandemic as well as over the last 16 years, having matured an extensive program in the research, education, and clinical components of highly infectious diseases and biocontainment.

The UNMC Center for Global Health Security has been the umbrella organization that has organized all of these components and continues to have strong leadership from retired military public health as well as gifted research scientists from across the nation. As a co-founding partner of NETEC, as a recipient of the Regional Disaster Health Service Awards, and as a close collaborator with the Department of Health and Human Services, the Department of Defense, the Department of Homeland Security and the Department of State, we have enjoyed the opportunity to always "lean in" as the need arises.

I am sure your days are full not only of the complex logistics and tension that fill leadership roles at this time but also maintaining a "steady hand on the rudder" as we navigate these challenging waters. I think back to my days at New York Presbyterian and Cornell Med, knowing that we are both Cornell Med grads, both did our residency and fellowship training in New York, and have had the opportunity to interact back so many years ago. I do remember quite well the first time that we met and have always reflected warmly at having even a brief opportunity to interact.

I do not write to ask for anything but to just simply thank you for all that you continue to do and know that you always have a friend here in Nebraska. I wish you and your family the very best as we continue this journey.

Most sincerely,

> Thank you from the bottom of my heart for highlighting the health disparities and disproportionate burden of disease influencing outcome of Covid-19 infections in African Americans. Participants in my observational, longitudinal, epidemiologic Baltimore-based study, HANDLS https://handls.nih.gov/ are terrified by the level of disease they are seeing in their communities across Baltimore. We have been on the phone with and texting participants to educate them, support them in their efforts to get tested, remind them of the importance of social distancing and self-isolation when appropriate to protect their health. We are acutely aware of their fragility. Testing in Baltimore is limited. The National Guard has set up community testing at the Pimlico Race Track; however, although we have deployed our mobile medical research vehicles to Pimlico in the past to conduct our study, the current crime rate is such that our participants and community residents in general do not go to the Pimlico area especially if they are on foot. The other issue with testing for African Americans and our participants is the need to have a health care provider that one can contract to discuss symptoms to get a referral for testing. The unravelling of the Affordable Care Act has severely impacted access for African Americans across the nation and especially in Baltimore. Our participants are calling my staff clinician and nurse practitioner for referrals if they have symptoms. We have reached out to colleagues at

Health Care for the Homeless, JHU and other medical entities to facilitate access.

Thank you all you are doing. Since I work in Baltimore, I haven't seen you in person since [redacted] (b) (6) [redacted]. The current pandemic however, reminds me of the days of the AIDS epidemic when I worked as Sam Broder's special assistant for underserved populations while Peggy Hamburg worked for you. I was in awe of you and Sam then and I remain in awe of you today. I have known many Regis men...but you are clearly head and shoulders above them all.

>
> Dear Tony and Patty:
> Responses to Burklow's questions to me from your group call yesterday:
> 1) I think we have landed in the right place for the film about your life. Nat Geo, Disney, and Bob Iger himself, all understand the need for discretion now but are wildly supportive about releasing a film that will celebrate the importance of your life, science and public health. I wanted the best home, broadest distribution, and strongest team for your film. You have entrusted me with your story, so I just want to do right by it. We are really happy with the filming that we have done so far personal [redacted] (b) (6) home, school) to work (office etc).
> 3) The other film we have been working on (ENDING AIDS), which follows globally the HVTN trials/latest Aids research to complete "the toolbox" is definitely still happening. It is now in pause with COVID-19….but will move forward again when we get through this. Filming at research sites in South Africa, US, and Latin America has been great...and when you have time — in the future — I will outline. You obviously are a key subject in ENDING AIDS also, but ENDING AIDS will spend a lot of time with doctors at the field research sites and with volunteers in the trials. The Aids conference and meetings footage we have shot with you will be shared between films, smartly and distinctly. ENDING AIDS will be released a year plus later than the release of your biographical film—I am focused on your film now. Howard Hughes Medical Institute remains the educational partner on ENDING AIDS. In the fall we will finalize the broadcast/streaming partner for ENDING AIDS. So, bottom line it will be released a year after your film, and will be a film focused on showing in detail where we are now with aids research and the key people in the chain from you to a young female volunteer in South Africa/a young male volunteer in Birmingham.
> FILMING REQUESTS for your film now.
> 4) NO more asking to film with the Task Force.
> 5) I do have two personal filming requests for you — would it be possible to drive to NIH with you once or twice a week and capture your working/appropriate conversations in the car. That will be so helpful narratively to tracking your scientific and communication leadership. The footage we did that first day is truly

great. We will just turn around and come back after the ride there--- in our follow car (we have NIH access badges). Secondly, would it be possible to sit down with you on camera for 15 minutes once a week (on the weekend?) at the office or on the back deck/some safe location to talk with me in real time about what you are managing with treatments, vaccines, etc. so we can pull the scientific/communication narrative on COVID-19 through your film.

6) We love the live truck and the walks, so whenever that works we will be there.

7) I NEVER ever want to interfere with the work on the Task Force, lives are at stake. IF something doesn't work for filming no questions asked we don't do it, we stop, cancel/pivot. No need to explain, the team here understands and only wants to do what works for you, your team…. (b) (6).

With appreciation,

Janet

Subject: Council of Scientific Society Presidents Support of Science Award

Dear Dr. Fauci;

Council of Scientific Society Presidents (CSSP) would like to honor you with our Support of Science Award at our May Leadership Workshop (virtual). The purpose of this award is to honor those who have proven their outstanding support of U.S. science, free scientific communication, and a support of basic science research. The expertise with which you guide the United States through these unprecedented COVID-19 times simply reinforces the dedication you exhibit to ensure the greatest safety to the greatest number of US citizens.

Dr. Martin Apple talked to Kim Barasch earlier this week. Please find the attached formal invitation letter she indicated that was needed. I have also attached a PDF of a brochure, though most information is on our website.

If you or Kim have any questions, please let me know by email or phone.
Sincerely,
Sharon Mosher

Hi Tony,

I hope that you are doing well despite all that you are dealing with around COVID-19. It has been many years since I had the opportunity to work with you but my job at NIAID was one of my favorite positions and gave me a great start to my career. So, when I saw the below graphic, it made me smile and I wanted to send you a note.

I truly appreciate how you are handling the COVID-19 situation. Your comments are a breath of fresh air amidst politics and uncertainty. With daily White House press briefings, increased security and scrutiny, 24/7 media interviews and great popularity, you seem to be holding up well - as you always do. Your recent interview with JAMA's Editor-in-Chief Howard Bauchner was particularly well done and very enlightening.

Thank you for everything that you are doing and please stay healthy!

Kind regards,

Mary Jane

Dr. Fauci,

Attached is an updated "one-pager" for your call on Monday with members of the Congressional Black Caucus. At Greg's recommendation, we have added information on the NIH-supported serosurvey that was announced this afternoon.

Please let me know if I can be of further assistance (Chase cell: (b) (6))

Thanks,
Chase

Subject: Attn Dr. Fauci: Key Points for Congressional Black Caucus Briefing Call - Monday 11:30a.m.

Dr. Fauci,

On Monday, April 13th, at 11:30 a.m., you are scheduled to participate in an informal discussion/telebriefing regarding health disparities and COVID-19 with members of the Congressional Black Caucus (CBC). Rep. Barbara Lee (D-CA, including Oakland and Berkeley) – former CBC chair – made the request. A list of expected call participants is below the signature line of this email.

I have attached a "one-pager" to provide some background on health disparities and COVID-19 that includes information on NIH COVID-19 research that may be relevant to the discussion. As you are aware, we do not have any COVID-19 studies directly focused on the African American community. Hilary and Greg have provided input.

Please let me know if I can be of further assistance (Chase cell: [redacted] (b) (6))

Thanks,
Chase

List of CBC call participants
Rep. Barbara Lee
Rep. Karen Bass (CBC Chair)
Rep. Robin Kelly (CBC Health Braintrust Chair)
Rep. G.K. Butterfield
Rep. Yvette Clarke
Rep. Cedric Richmond
Rep. Brenda Lawrence

Rep. Steve Horsford
Rep. Ayanna Pressley

Gilead's experimental drug remdesivir shows `hopeful' signs in small group of coronavirus patients

Two-thirds of severely ill patients showed improvement in their oxygen therapy level when treated with the antiviral drug

Two ampuls of remdesivir are pictured during a news conference at the University Hospital Eppendorf (UKE) in Hamburg, April 8, 2020, as the spread of coronavirus disease (covid-19) continues. Ulrich Perrey/Pool via REUTERS (Pool/Reuters)

A majority of a small group of patients showed improvements after being treated with an experimental coronavirus treatment made by Gilead Sciences, bolstering hopes for finding a treatment for the disease, according to a study published in the New England Journal of Medicine Friday.

The group of patients received the anti-viral drug remdesivir as part of a "compassionate use" trial, not a double-blind placebo-controlled trial which would offer more definitive evidence. Also, the cohort of patients was small, only 53 patients in the United States and around the world. Those limiting factors prevent scientists from declaring that the drug works.

Still, the improvements offered positive news about a drug seen by global health authorities as offering the best shot at becoming a treatment for the disease.

Thirty six patients out of 53 — or two-thirds — showed improvement in oxygen support, trial authors said. Seventeen of 30 patients who were on ventilators were able to be taken off the life-support machines.

"We cannot draw definitive conclusions from these data, but the observations from this group of hospitalized patients who received remdesivir are hopeful," said Jonathan D. Grein, MD, Director of Hospital Epidemiology, Cedars-Sinai Medical Center, Los Angeles, and lead author of the journal article. "We look forward to the results of controlled clinical trials to potentially validate these findings."

While 68 percent of the patients showed improvement in the level of oxygen support they needed, 13 percent died, the NEJM study said. That 13 percent compares favorably to mortality rates of 17 to 78 percent in China among severely ill patients, the authors wrote.

Gilead's stock has been bolstered for weeks by expectations over remdesivir.

Remdesivir was discovered by Gilead in the hunt for antiviral drugs about a decade ago, and the National Institutes of Health has partnered with the company to explore its benefits. It was shown to work against an array of viruses in laboratory tests.

It showed effectiveness in primates infected with Ebola but failed in a trial in the Democratic Republican of Congo in humans with the deadly disease. It has shown effectiveness as a preventive therapy in primates for MERS, which is a coronavirus cousin of the Covid-19 virus.

There are no treatments approved by the Food and Drug Administration to treat coronavirus, but the FDA has granted an emergency use authorization for the use of hydroxychloroquine and chloroquine, two decades-old anti-malarial drugs. There is scant evidence that the therapy works, but President Trump has repeatedly boosted the promise of the drugs.

Even while multiple full clinical trials of remdesivir continue, Gilead hasbeen swamped with requests for "compassionate use" of the drug. Under compassionate use rules, physicians can obtain experimental drugs for their seriously ill patients when there is nothing else to try.

Gilead said last week that it had enough of the experimental drug on hand to treat up to 140,000 people under compassionate use programs.

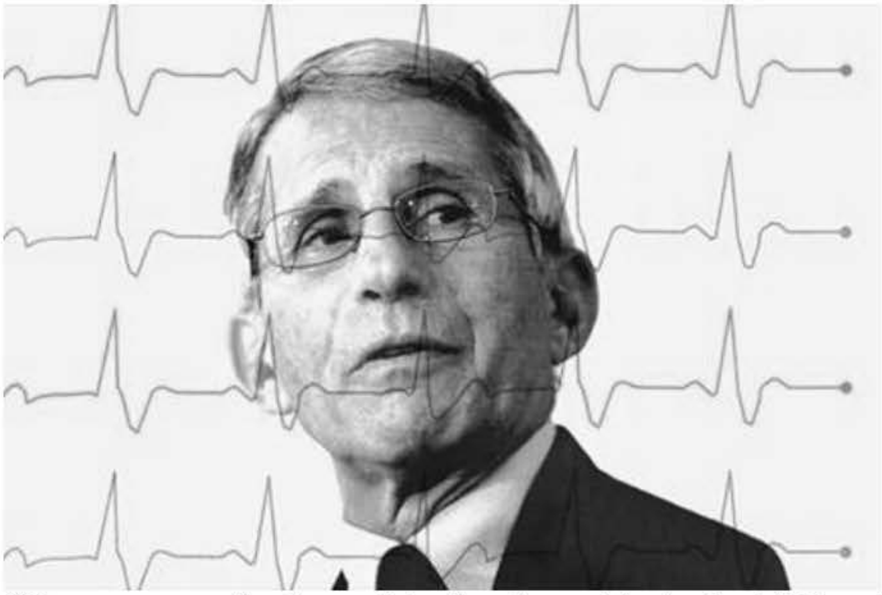
How Anthony Fauci Became America's Doctor

An infectious-disease expert's long crusade against some of humanity's most virulent threats.

By Michael Specter

April 10, 2020



"You stay completely apolitical and non-ideological," Fauci says. "I'm a scientist and I'm a physician. And that's it." Illustration by Tyler Comrie. Photograph by Win McNamee / Getty

Just before midnight on March 22nd, the President of the United States prepared to tweet. Millions of Americans, in the hope of safeguarding their health and fighting the rapidly escalating spread of COVID-19, had already begun to follow the sober recommendation of Anthony S. Fauci, the country's leading expert on infectious disease. Fauci had warned Americans to "hunker down significantly more than we as a country are doing." Donald Trump disagreed. "WE CANNOT LET THE CURE BE WORSE THAN THE PROBLEM ITSELF," he tweeted.

Trump had seen enough of "social distancing." In an election year, he was watching the stock market collapse, unemployment spike, and the national mood devolve into collective anxiety. "I would love to have the country opened up, and just rarin' to go by Easter," he said, on Fox News. "You'll have packed churches all over our country. I think it'll be a beautiful time."

Trump's Easter forecast came more than two months after the first U.S. case of COVID-19 was identified, in Washington State, and more than a hundred days after the novel coronavirus emerged, first from bats and then from a live-animal market in the Chinese city of Wuhan. Every day, more people were falling sick and dying. Despite a catastrophic lack of testing capacity, it was clear that the virus had reached every corner of the nation. With the Easter holiday just a few weeks away, there was not a single public-health official in the United States who appeared to share the President's rosy surmises.

Anthony Fauci certainly did not. At seventy-nine, Fauci has run the National Institute of Allergy and Infectious Diseases for thirty-six years, through six Administrations and a long procession of viral epidemics: H.I.V., SARS, avian influenza, swine flu, Zika, and Ebola among them. As a member of the Administration's coronavirus task force, Fauci seemed to believe that the government's actions could be directed, even if the President's pronouncements could not. At White House briefings, it has regularly fallen to Fauci to gently amend Trump's absurdities, half-truths, and outright lies. No, there is no evidence that the malaria drug hydroxychloroquine will provide a "miracle" treatment to stave off the infection. No, there won't be a vaccine for at least a year. When the President insisted for many weeks on denying the government's inability to deliver test kits for the virus, Fauci, testifying before Congress, put the matter bluntly. "That's a failing," he said. "Let's admit it."

When Trump was not dismissing the severity of the crisis, he was blaming others for it: the Chinese, the Europeans, and, as always, Barack Obama. He blamed governors who were desperate for federal help and had been reduced to fighting one another for lifesaving ventilators. In one briefing, Governor Andrew Cuomo, of New York, said, "It's like being on eBay with fifty other states, bidding on a ventilator." Trump even accused hospital workers in New York City of pilfering surgical masks and other vital protective equipment that they needed to stay alive. "Are they going out the back door?" Trump wondered aloud.

As a reporter who writes mainly on science and public-health issues, I've known Fauci since the H.I.V./AIDS epidemic exploded, in the mid-eighties. He once explained to me that he has developed a method for dealing with political leaders in times of crisis: "I go to my favorite book of philosophy, 'The Godfather,' and say, 'It's nothing personal, it's strictly business.' " He continued, "You just have a job to do. Even when somebody's acting ridiculous, you can't chide them for it. You've got to deal with them. Because if you don't deal with them, then you're out of the picture."

Since his days of advising Ronald Reagan and George H. W. Bush, Fauci has maintained a simple credo: "You stay completely apolitical and non-ideological, and you stick to what it is that you do. I'm a scientist and I'm a physician. And that's it." He learned the value of candor early. "Some wise person who used to be in the White House, in the Nixon Administration, told me a very interesting dictum to live by," he told me in 2016, during a public conversation we had at the fifty-year reunion of his medical-school class. "He said, 'When you go into the White House, you should be prepared that that is the last time you will ever go in. Because if you go in saying, I'm going to tell somebody something they want to hear, then you've shot yourself in the foot.' Now everybody knows I'm going to tell them exactly what's the truth."

Americans have come to rely on Fauci's authoritative presence. Perhaps not since the Vietnam era, when Walter Cronkite, the avuncular anchor of the "CBS Evening News," was routinely described as the most trusted man in America, has the country depended so completely on one person to deliver a daily dose of plain talk. In one national poll, released last Thursday, seventy-eight per cent of participants approved of Fauci's performance. Only seven per cent disapproved.

On March 23rd, Fauci failed to appear at the daily briefing in the White House pressroom. Twitter promptly lost its mind. #NoFauci became a top trending topic, followed closely by #whereisFauci and #letTonyspeak. There was speculation that Trump, who is inclined to fire anyone who disagrees with him or, worse, garners some praise in the media, had lost patience with Fauci. As one of Fauci's old friends told me, "This is a President who doesn't give a shit about Fauci's accomplishments, his history, or his learning. If anything, they're negatives."

The truth was less alarming. "I was tied up in a task-force meeting, and we were trying to work out some difficult policies," Fauci said. "I have no trouble with the President. When I talk to him, he listens." My experience with Fauci suggested that this last statement was perhaps a triumph of pragmatism over accuracy. His priority, as he's made clear, is to do what is necessary to save lives. So I was not surprised to receive an e-mail from Fauci the following day, saying that he had been asked to refrain from participating in personal profiles. It seemed that it was one thing for him to talk about the news with reporters or even to chat on Instagram with Stephen Curry, the Golden State Warriors star. But focussing on himself, rather than on the President, was another thing entirely.

Fauci and Trump are about as odd a duo as American political life has ever produced. Both men are in their seventies. Both come from the outer boroughs of New York City. Both are direct, even blunt. But that's where the resemblance ends. Fauci has always been a person of unusual discipline. Nearing eighty, he works about eighteen hours a day. Long ago, when his three children were young, he and his wife, Christine Grady, who runs the bioethics department at the National Institutes of Health, decided to maintain the sanctity of family dinners by starting them when he got home from the office, at around nine o'clock. For decades, Fauci has taken long lunchtime runs, but, during the crisis, he's cut back his routine to power walking—and only on weekends. Fauci parses his words with care and believes, above all, in the power of facts and the efficacy of data.

ADVERTISEMENT

David Baltimore, a Nobel laureate and a pioneer of molecular biology, told me, "Tony is unique, in that he has such credibility with politicians that he's been able to insert hard facts into the conversation. That has been wonderful for our country and the world." According to David Relman, a microbiologist at Stanford University who for years has advised the government on biological threats, "Tony has essentially become the embodiment of the biomedical and public-health research enterprise in the United States. Nobody is a more tireless champion of the truth and the facts. I am not entirely sure what we would do without him."

Fauci can be impatient with the compromises of politics. In my conversations with him, he has responded furiously when a dicey amendment, a bogus rider, or a "poison pill" is attached to a public-health bill. He recalled one congressional provision, in 2016, that tried to make it "legally permissible to fly the Confederate flag at national cemeteries. I am not kidding." When dealing with politicians, he told me, he relies on the pseudo-Latin expression *Illegitimi non carborundum:* Don't let the bastards grind you down. But he has inspired respect throughout the political world and beyond. Fauci's office walls are covered with scores of photographs of him with Presidents, senators, visiting Prime Ministers, business leaders, actors. In October, 1988, George H. W. Bush, during a Presidential debate with Michael Dukakis, was asked who his heroes were. "I think of Dr. Fauci," Bush replied. "You've probably never heard of him. . . . He's a very fine researcher, a top doctor at the National Institutes of Health, working hard, doing something about research on this disease of AIDS." These days, nearly everyone has heard of Fauci. Pandemic-memorabilia entrepreneurs have put his face on bottle openers, coffee mugs, and bumper stickers: "In Dr. Fauci we trust." The National Bobblehead Hall of Fame and Museum has produced a seven-inch likeness of him, partly to raise money to produce protective gear for medical workers. There's a Facebook group called Dr. Fauci Speaks, We Listen, and another called Dr. Fauci Memes for Social Distance Teens. A petition has circulated to nominate him as *People's* "sexiest man alive."

On right-wing social media and talk radio, Fauci has a different image: he is routinely disparaged as a closet lefty who is exaggerating the threat of the coronavirus. "Has anyone else noticed that every suggestion by Dr. Doom Fauci just happens to also be the worst possible thing for the economy?" the conservative Internet TV host Bill Mitchell tweeted. "That's not an accident folks." An analysis in the *Times* found more than seventy Twitter accounts that have pushed the hashtag #FauciFraud, with some tweeting out anti-Fauci bile hundreds of times a day. "There seems to be a concerted effort on the part of Trump supporters to spread misinformation about the virus," Carl Bergstrom, a professor of biology at the University of Washington who has studied misinformation, told the paper. "There is this sense that experts are untrustworthy, and have agendas that aren't aligned with the people." Fauci has received so many personal threats that the Justice Department recently approved a security detail for him. Fauci shrugged it off, telling reporters, “I’ve chosen this life.”

The crisis that the world now faces comes as no surprise to Fauci. On January 10, 2017, ten days before Trump took the oath of office, Fauci delivered the keynote address at a conference at Georgetown University, titled “Pandemic Preparedness for the Next Administration.” After describing his years of managing epidemics, he posed a series of questions to the audience: “Will there be a resurgence of Zika? We’re getting into the summer in South America. Are we going to see a resurgence or not? What about influenza? Are we going to get a new pandemic?”

Fauci’s last point, he emphasized, was almost certainly the most important: the possibility that some unknown, powerfully infectious pathogen could emerge to threaten the world. “What about things that we’re not even thinking about?” he said. He let the question drift out over the hall. “What is for sure,” he concluded, “is that, no matter what, history has told us definitively that it will happen.”

On the day that Anthony Stephen Fauci was born, the front-page headline in the *Times* was “PRESIDENT TO GIVE EMERGENCY FACTS TO NATION ON RADIO.” It was Christmas Eve, 1940. The Second World War had begun, and the United States was less than a year away from joining the fight.

Fauci grew up in southwest Brooklyn, first in Bensonhurst and later in Dyker Heights, where his family ran a pharmacy and lived in an apartment upstairs. The pharmacy was across the street from the Shrine Church of St. Bernadette. When Mass was finished on Sundays, Fauci recalled, people would walk over to get prescriptions filled and to buy whatever else they needed for the coming week. Tony’s father, Stephen, dispensed medications, and was known to customers as Doc. His mother, Eugenia, worked the register, along with his older sister, Denise. From an early age, Tony spent evenings and weekends riding around the neighborhood on his Schwinn, making deliveries.

Fauci’s parents were born in New York; one set of grandparents had emigrated from Naples, the other from Sicily. Anthony first took Communion at the age of seven and was confirmed at twelve. He went to elementary school at Our Lady of Guadalupe, in Bensonhurst. “I had no idea at the time when I was there, being taught by the Dominican nuns, that I would be interested in science,” he said. “I was interested in a lot of things, mostly sports, but certainly not science.”

In those days, baseball was the social glue of Brooklyn. The borough was Dodger territory and Ebbets Field was consecrated ground—but Fauci was devoted to the Yankees, who played in the faraway Bronx. In the midst of the coronavirus crisis, I e-mailed to ask about this anomaly, not necessarily expecting an answer. He replied almost instantly. “You probably are unaware, but half the kids in Brooklyn were Yankee fans,” he wrote. “We spent our days arguing who was better: Duke Snider versus Mickey Mantle; Roy Campanella versus Yogi Berra; Pee Wee Reese versus Phil Rizzuto and on and on. Those were the days, my friend.”

Fauci has often referred to his father as “laid-back,” which, if true, must be a characteristic that skips a generation. “Tony has always been driven,” Michael Osterholm, the director of the University of Minnesota’s Center for Infectious Disease Research and Policy, and a longtime friend of Fauci’s, told me. “Whatever he was doing, he had to do it better than anybody else. I don’t know if it was certainty or something else. But he was meant to lead. Always. Everyone who knew him knew that. And Tony knew it, too.”

In 1954, he began attending Regis, a private Jesuit high school on the Upper East Side. Rigorous, small, competitive, and tuition-free, Regis is considered one of the finest all-male schools in the country. Fauci thrived there, though the commute between Dyker Heights and Eighty-fourth and Madison was long. He once estimated that he had spent the equivalent of seventy days of his teen-age life on the various subways and buses he took to get to and from school.

Fauci revelled in the demanding coursework. “We took four years of Greek, four years of Latin, three years of French, ancient history, theology,” he recalled. He developed an ability to set out an argument and to bolster it with evidence—good preparation, it turned out, for testifying before Congress. Last year, at a dinner that Regis held in his honor, he said that the school had taught him "to communicate scientific principles, or principles of basic and clinical research, without getting very profuse and off on tangents."

At the time, though, Fauci had no interest in becoming a doctor. "I was captain of the Regis High School basketball team," he once told me. "I thought this was what I wanted to do with myself. But, being a realist, I very quickly found out that a five-seven, really fast, good-shooting point guard will never be as good as a really fast, good-shooting seven-footer. I decided to change the direction of my career."

At school, Fauci's accomplished peers were headed to careers in medicine, engineering, and the law. At home, he was steeped in the humanities: "Virtually all my relatives on my mother's side—her father, her brother, and her sister's children—are artists." His mother helped tip the balance. "She never really pressured me in any way, but I think I subtly picked up the vibrations that she wanted very much for me to be a physician," Fauci said. "There was this tension—would it be humanities and classics, or would it be science? As I analyzed that, it seemed to me that being a physician was the perfect melding of both of those aspirations."

From Regis, Fauci went on to another Jesuit institution, Holy Cross, in Worcester, Massachusetts. His high-school faculty had left him little choice in the matter. "They just wouldn't write a recommendation for you if you wanted to apply to Harvard or to Cornell, or Columbia," he said. Fauci enrolled in 1958 and was pleased to find that the university took a broad view of premedical studies. He signed up for a program called Bachelor of Arts–Greek Classics–Premed. "It was really kind of bizarre," he recalled. "We did a lot of classics, Greek, Latin, Romance languages. . . . We took many credits of philosophy, everything from epistemology to philosophical psychology, logic, etc. But we took enough biology and physics and science to get you into medical school."

During the summers, Fauci worked construction jobs. One year, he found himself assigned to a crew that was building a new library at

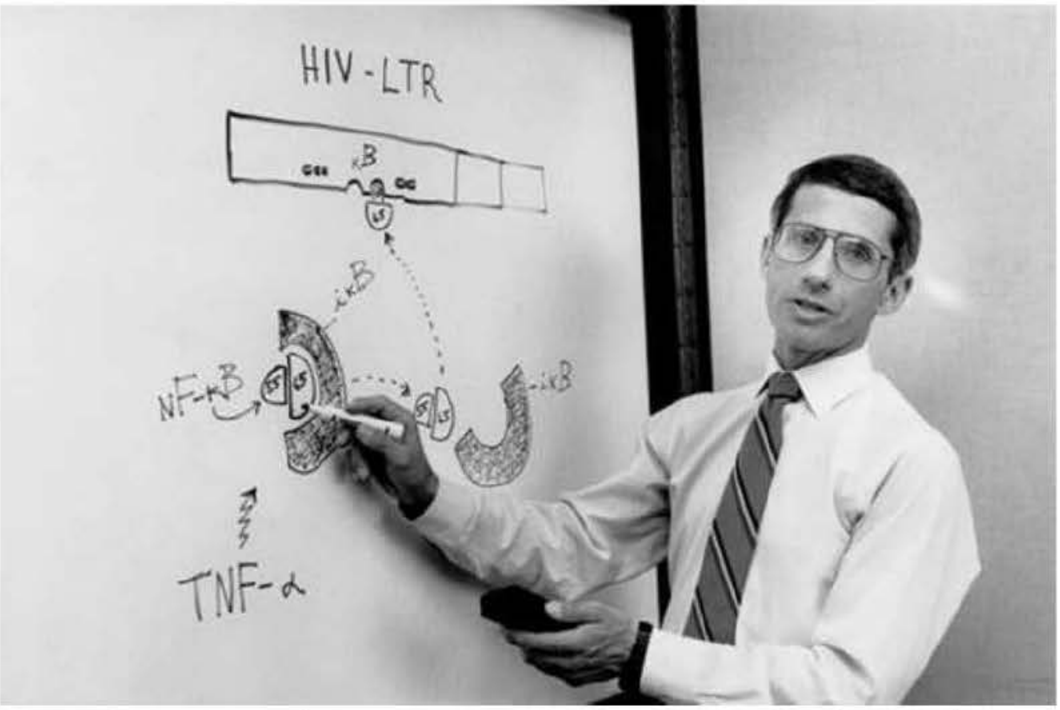
Cornell Medical College, on the Upper East Side. “On lunch break, when the crew were eating their hero sandwiches and making catcalls to nurses, I snuck into the auditorium to take a peek,” Fauci recalled in 1998, at the medical school’s centennial celebration. “I got goosebumps as I entered, looked around the empty room, and imagined what it would be like to attend this extraordinary institution. After a few minutes at the doorway, a guard came and politely told me to leave, since my dirty boots were soiling the floor. I looked at him and said proudly that I would be attending this institution a year from now. He laughed and said, ‘Right, kid, and next year I am going to be Police Commissioner.’ ”

Fauci graduated first in his class from Cornell in 1966, just as America’s involvement in Vietnam was accelerating. Every new physician was required to perform some kind of military service. “We were gathered in the auditorium at Cornell, early in our fourth year of medical school,” Fauci recalled. “Unlike today, we had only two women in the class and seventy-nine men. The recruiter from the armed forces came there and said, ‘Believe it or not, when you graduate from medical school at the end of the year, except for the two women, everyone in this room is going to be either in the Army, the Air Force, the Navy, or the Public Health Service. So you’re going to have to make your choice. Sign up and give your preferences.’ ”

Fauci wanted to work in the U.S. Public Health Service; his fallback was the Navy. He got his first choice, and ended up at the National Institutes of Health, which was then establishing itself as the country’s primary center for biomedical research. Nearly everyone in academic medicine spent some time at one of its branches; except for three years back at Cornell to complete his internship and residency, Fauci has spent five decades there.

In 1972, Fauci started as a senior researcher at the National Institute of Allergy and Infectious Diseases. He was drawn to investigating ailments that were difficult but not impossible to treat. “I wanted something that could make you very sick and kill you unless I intervened. And if I intervene, you're essentially cured," he told Ushma Neill, the editor of *The Journal of Clinical Investigation*, in 2014. "Now, that seems a little bit too simplistic, but that's really the nature of most infectious diseases."

Working in the lab of Sheldon Wolff, Fauci studied the molecular nature of fever. The field of immunology was still young, but scientists were rapidly learning how to manipulate the smallest components of individual cells, which opened the way to a decade of discovery. Chronic fevers can have a number of underlying causes, among them an uncommon condition known as vasculitis—an inflammation of the blood cells that often occurs when the body's immune system mistakenly attacks its own blood vessels. Many of Fauci's vasculitis patients suffered from rare inflammatory diseases, such as granulomatosis with polyangiitis, which damages blood vessels in the lungs, kidneys, and other organs. The disease was almost always fatal. Fauci and his infectious-disease colleagues at the N.I.H. were frequently asked to visit the National Cancer Institute, which was in the same building as his lab, to consult on patients who were receiving chemotherapy. The drugs suppressed tumors, but they were highly toxic. And they had another side effect, Fauci told me: "Those people are susceptible to a lot of things like infections and bleeding, because the treatment has destroyed their immune systems."



In 1990, Fauci was the government's leading researcher focussed on the AIDS *epidemic.* Photograph by George Tames / The New York Times / Redux

Fauci, together with Wolff, his mentor, wondered if this side effect could be harnessed to help vasculitis patients, whose immune systems were overactive. "I thought if we could somehow give a cancer drug at a low enough dose perhaps we could turn the disease off without any of the secondary complications," he recalled recently. "First we did it in a few patients, and, much to our delight, they had a total remission. Before you know it, we ended up curing a very, very lethal, albeit uncommon, disease."

For the first time, this technique enabled researchers to do effective work on lupus, rheumatoid arthritis, and transplant rejection. "If you look at immunology, it has from the very beginning been inextricably linked to infectious diseases," Fauci said. "What is the immune system for? The immune system protects you against invaders from without—microorganisms—as well as, in some cases, the emergence of certain tumors from within."

In 1981, a strange new syndrome emerged that transformed Fauci's research and, eventually, the lives of millions of people around the world. “All of a sudden, this new disease comes along,” Fauci recalled, referring to what would soon come to be known as AIDS. “Even before the cause of it was proven to be H.I.V., everybody in the field knew that it had to be a virus. I said to myself, ‘Here it is, a virus, still to be determined, that’s affecting profoundly and destroying the human immune system.’ ” Fauci believed that he had been training all his life for a threat like this one. He was an expert in viruses and in the immune system—and he had always been attracted to combatting serious, even fatal diseases. “I wanted to be where the action was,” he said.

At first, few public-health officials seemed to care. In June of 1981, the *Morbidity and Mortality Weekly Report*, a publication of the Centers for Disease Control, issued a paper that included an account of five young men, all gay, who had contracted pneumocystis, a form of pneumonia that had previously been reported only in people with dramatically impaired immune systems. The young men described in the study had all been healthy. “I thought it was a fluke,” Fauci recalled. “I put it aside on my desk, thinking that maybe this was some drug that they had taken that suppressed their immune system.”

A month later, an even more alarming report arrived from the C.D.C. Fauci read it with an uneasy sense that a disaster was looming: “I made the decision that I was going to stop what I was doing, much to the chagrin of my mentors, who were saying, ‘Why do you want to give up a great trajectory of a career to study a handful of gay men with this strange disease?’ But, deep down, I really knew that this was going to explode.”

Fauci wrote a paper to sound the alarm. “I called it my *apologia pro vita sua*—an explanation for what I’m doing,” he said. In the paper, Fauci pointed out that, although the disease “seems to selectively affect a particular segment of our society,” it demanded a medical solution. Moreover, he warned, “any assumption that the syndrome will remain restricted to a particular segment of our society is truly an assumption without a scientific basis.” Fauci sent the manuscript to *The New England Journal of Medicine*, in late 1981. It was rejected. “One of the reviewers said I was being alarmist,” Fauci said. He tried a different journal, *The Annals of Internal Medicine*, and the following June the paper was published.

In the laboratory, Fauci began making progress. He had been investigating B cells, which are involved in the production of antibodies. In 1983—before H.I.V. was even known by that name—his lab became the first to report that B cells became hyperactive in patients with AIDS. When a healthy person is invaded by a virus, antibodies mount a defense, but, when H.I.V. hijacked B cells, the antibody system went awry. Fauci and his team had identified one of the crucial features of AIDS. "We made that observation without having any idea of what we were dealing with," he said in an interview for an N.I.H. oral history. "I think that speaks for sound scientific and clinical observation." The politics of seeking a cure, though, would be far harder to manage.

On October 11, 1988, more than a thousand AIDS activists gathered outside the headquarters of the Food and Drug Administration, in Rockville, Maryland, to protest the agency's glacial reaction to the epidemic. The activists knew that their community needed new treatments if they were to avoid catastrophe—but they were stymied by the F.D.A.'s drug-approval process, a remarkably inflexible system that typically took years.

That same day, another group of protesters marched onto the campus of the National Institutes of Health, in Bethesda, Maryland. They were headed for Building 31, the home of the National Institute of Allergy and Infectious Diseases. Fauci, who had become the institute's director in 1984, was now the government's leading scientist focussed on the AIDS epidemic. Even though he was not running the F.D.A., he appeared almost daily in the media to discuss the crisis. "My face was the face of the federal government," Fauci told me. He was asked the same question nearly every day: why wasn't the government moving faster? It didn't help that the Reagan Administration seemed so indifferent to the plague.

Fauci watched from his office window as activists surrounded the building and tried to scale its walls. Some were dressed in black robes and carried scythes. Many waved pink-and-black banners, bearing the words "NIH Wake Up!" or "Stop Killing Us!" All over campus, a chant could be heard: "Fuck you, Fauci!"

"God, I hated him," Larry Kramer, the writer and activist who helped establish the two most important AIDS advocacy groups in the country, the Gay Men's Health Crisis and ACT UP, said. "As far as I was concerned, he was the central focus of evil in the world." Kramer attacked Fauci relentlessly in the media. He called him an "incompetent idiot" and a "pill-pushing" tool of the medical establishment, insulted his wife, and even compared him to Adolf Eichmann. In 1988, Kramer published a scathing open letter. "Anthony Fauci, you are a murderer," he wrote. "Your refusal to hear the screams of AIDS activists early in the crisis resulted in the deaths of thousands of Queers."

As the epidemic spread and the death toll rose, it was common for gay activists to view Fauci and NIAID with rage. Fauci did not control the drug-approval process, but he was seen as a barrier to opening access to clinical trials, in which volunteers could receive potentially lifesaving medications.

For most people infected with H.I.V., taking experimental drugs was the only alternative to simply waiting for death. Yet the F.D.A.'s arcane rules prevented the vast majority of patients from qualifying for trials. For instance, a significant number of H.I.V. patients suffered from pneumocystis pneumonia. The condition—the same one observed in the initial C.D.C. report—could be fatal, so many who had it used an experimental antimicrobial medication called pentamidine, which had proved highly effective. But people who took experimental medications were barred from participating in other clinical trials.

At first, Fauci held to the standard N.I.H. line that research need not focus on the immediate welfare of patients. "When we had clinical trials, we, the scientific community and the regulatory community, did not listen" to the activists, he recalled. "It was, at the time, an attitude that many of us had, and I probably had it myself." He was right about that. I covered the AIDS epidemic for the Washington *Post*, and it was clear to me that Fauci was inclined to enforce the paternalistic medical tradition in which he had trained: doctors and scientists were unquestioned authorities, and drug development had to follow a rigid process that included animal testing and rigorous clinical trials. Otherwise, the benefits and the risks of these drugs could not be adequately assessed. In 1987, the F.D.A. approved the first drug to treat H.I.V.—azidothymidine, or AZT—and the announcement was met with a burst of hope. But the drug's liabilities were evident almost instantly. It had harsh side effects, and the benefits wore off; the virus itself soon became resistant to the drug. When new clinical studies began, involving cocktails of AZT and similar compounds, tens of thousands of people asked to participate. Again, though, volunteers were not accepted if they used other experimental drugs. The anger among activists grew more intense. "They started becoming amazingly iconoclastic and confrontational, and that scared the hell out of the scientists, who were fundamentally quite conservative," Fauci told me at his medical-school reunion. "When they were demonstrating on the N.I.H. campus, disrupting Wall Street, disrupting St. Patrick's Cathedral, instead of listening to them, scientists withdrew."

Without entirely understanding his own motives, Fauci decided to look beyond the activists' furious rhetoric and style. He recalls telling himself, "Let me put aside the goth dress—the earrings and the Mohawk haircuts and the black jackets—and just listen to what they have to say. And what they were saying made absolutely perfect sense." It helped that Fauci had something in common with the activists: "They were all New York guys. I had a little affinity to them because I'm a New Yorker. And I said, What would I do if I were in their shoes? And it was very clear: I would have done exactly the same thing."

The activists knew that they were facing a mercilessly lethal disease. In the summer of 1985, I travelled to New York to write my first long story on the toll that the epidemic was taking on the city's gay community. I interviewed dozens of men. To the best of my knowledge, only two of them are still alive: Larry Kramer, who is now eighty-four, and a political activist who prefers to remain anonymous.

Fauci, too, came to understand the severity of the crisis. "Everyone died," he said. "I was used to treating people who had little hope and then saving their lives—that was so wonderful. But, with AIDS in those days, I saved no one. It was the darkest time of my life." Faced with mounting evidence that his cautious approach made no sense, he did something that few public officials do: he reversed himself. Fauci transformed from a conventional bench scientist into a public-health activist who happened to work for the federal government. "I had to change," he told me.

When the demonstrators marched on the N.I.H. campus in 1988, Fauci no longer saw a threat. "I looked at them, and I saw people who were in pain," he recalled in an article in *Holy Cross Magazine*. He asked the police and the F.B.I. not to arrest any of them. Then he invited a handful of protest leaders to his office. "That began a relationship over many years," Fauci said. "They let me into their camp. I went to the gay bathhouses and spoke to them. I went to San Francisco, to the Castro District, and I discussed the problems they were having, the degree of suffering that was going on in the community, the need for them to get involved in clinical trials, since there were no other possibilities for them to get access to drugs. And I earned their confidence."

Fauci, in his mid-forties, was the youngest director of an N.I.H. institute in a century, and he lacked the political influence to act independently. Even in his own field, he struggled to recruit allies. "I couldn't convince my own people in infectious-disease leadership to take on H.I.V./AIDS," he told me. So he created a division within his institute devoted to the disease.

One day, in the late eighties, Fauci asked me to stop by his office in Building 31 on the N.I.H. campus. He told me that he had a wild idea: he wanted to hire Mark Harrington, ACT UP's point man on drug-treatment trials. Harrington, a prominent AIDS researcher and activist, had no formal scientific training. But Fauci, like most of those who had seen him testify before Congress or speak to a crowd, was dazzled by his brilliance.

Harrington discussed the idea with Fauci, but decided that the job would be a disaster for him. "There's no way I could have functioned within that bureaucracy," he told me recently. "The people I respect would have seen me as a sellout." Yet Harrington continued to make a profound impression on Fauci's thinking.

Harrington was passionately committed to loosening up the F.D.A.'s restrictive regime. "It was murder," he told me. "I don't know any other way to describe it." Harrington, who went on to win a MacArthur "genius" grant for his work on the disease, established himself as the most knowledgeable student of the agency's byzantine regulations. In meetings with Fauci and other officials, he urged them to move faster and with greater compassion for those who were suffering.

There are three stages in most F.D.A. clinical trials. The first tests whether a drug is safe. The second assesses its efficacy. The last stage, conducted in larger groups, confirms that the drug works and that there are no serious adverse reactions. Harrington argued that people with no alternative should be granted access to those drugs as soon as they had been proved safe, even if their effectiveness remained unknown.

At first, Fauci was concerned that, if people taking multiple experimental medications joined clinical trials, the results would be hopelessly muddled. He was also afraid that granting sick people unrestricted access to unapproved drugs would deter them from participating in the trials at all. Harrington and other activists reassured him that they were committed to strictly monitored drug trials that would provide enough data to know what worked and what did not.

Fauci is a realist, and the facts were obvious to anyone who cared to look. Traditional methods of testing drugs weren't working. Underground networks were growing everywhere. With so many AIDS patients taking untested medications, federal health officials had to concede that their system was broken. Even the most fundamental protocol of a clinical trial—giving some participants a placebo—came into question. In a study conducted in San Francisco in 1989, nearly all the volunteers had their medicine analyzed, to see whether they were receiving an active dose. Those who learned that they had been given placebos almost invariably dropped out.

"There was a feeling in science that doctors know best, scientists know best," Fauci said. "We love our patients, but they don't really know what's best for them. Then, when we dealt with this disease that was brand new—that was frightening, that was killing people in a way that was historic—the people who were impacted by the disease wanted to have something to say about how we conducted research."

There were still moments of confrontation. In May, 1990, hundreds of ACT UP activists returned to the N.I.H., demanding more AIDS treatments and greater representation of women and people of color in clinical trials. At a planning session for the protest, a young activist named Tony Malliaris performed a rap song called "Storm the NIH," which included the lyrics "I don't know what Fauci thinks, but this ain't Denmark, and something stinks." (Malliaris died five years later, still in his early thirties.)

Fauci was undeterred. He threw his influence behind a program called Parallel Track, which made unapproved AIDS drugs available as soon as they were demonstrated to be safe, even as clinical trials were continuing. The initiative would not have succeeded without Fauci. But he always acknowledged that his approach had been shaped largely by the constructive pressure he received from AIDS advocacy groups and from leaders like Harrington.

This more inclusive approach ushered in a revolution in American medicine. Patients today demand as much information as possible about treatments they might receive, and no longer act as if their doctors' advice came straight from Mt. Olympus. They scour the Internet, assemble statistics, and often arrive at the hospital with a folder full of medical information. The F.D.A., for its part, will no longer consider approving a new drug until it has consulted representatives of groups who would use it. "There are strict scientific principles that have to be adhered to in medicine," Fauci told me. "At the same time, a humanistic touch is needed in dealing with people. You have to combine social aspects, ethical aspects, personal aspects with cold, clean science."

In 2002, I wrote a Profile of Larry Kramer for this magazine. By then, he and Fauci had become friends, with each expressing gratitude for the other's work in those years. Fauci told me, "In American medicine, there are two eras: before Larry and after Larry. There is no question in my mind that Larry helped change medicine in this country. When all the screaming and the histrionics are forgotten, that will remain." Kramer, who spent years in a constant rage at Fauci, now calls him "the only true and great hero" among government officials in the AIDS crisis.

As Trump defends his Administration's response to the pandemic, he has suggested repeatedly that COVID-19 was impossible to predict. "There's never been anything like this in history," he said, at a press conference on March 19th. "Nobody knew there would be a pandemic or epidemic of this proportion."

As everyone with even a casual interest in the history of science knows, pandemics have altered the destiny of humanity at least since 430 B.C., when Athens was struck by a plague that killed as many as two-thirds of its residents, just as the Spartans were laying siege. Beginning in 165 A.D., smallpox helped ruin the Roman Empire, sowing more destruction than foreign armies ever could. And, in the fourteenth century, the Black Death swept through Europe, killing more than half the population, according to recent estimates.

Yet, by the middle of the twentieth century, many scientists had begun to conceive of a world that was largely free of infectious epidemics. In 1951, Sir Frank Macfarlane Burnet, a future Nobel laureate in medicine, wrote, "The fever hospitals are vanishing or being turned to other uses. With full use of the knowledge we already possess, the effective control of every important infectious disease"—with the exception of polio—"is possible." His optimism was understandable. Antibiotics had made many lethal diseases easy to treat; improvements in sanitary conditions had transformed the lives of hundreds of millions of people. In developed countries, typhoid, cholera, and measles—major killers throughout history—had largely passed into memory; even tuberculosis, one of the great scourges of humanity, had been in decline for nearly half a century. By 1972, Macfarlane, writing with the microbiologist David White, was predicting that the "most likely forecast about the future of infectious diseases is that it will be very dull."

When Fauci was a young trainee, these kinds of predictions sometimes made him wonder if he had picked the wrong career. "I became concerned that I was entering . . . an area of biomedical research that was disappearing," he recalled in one speech. But, since 1984, when Fauci became the director of NIAID, there has not been a single day in which some epidemic has not threatened the globe. According to the World Health Organization, AIDS has killed more than thirty million people, and nearly forty million are now living with H.I.V. Tuberculosis, far from sliding into obscurity, infects roughly a quarter of the human population; the W.H.O. says that one and a half million people died from the disease in 2018.

But the greatest threat that humanity faces, by far, is a global outbreak of a lethal virus for which no treatment has been found. In just a few months, COVID-19 has forced billions of people, in nearly every country on earth, into a panicked withdrawal from society. Another pandemic like this might appear in two years, or in ten, or in a century. But I have never met a virologist or an epidemiologist who believes we won't encounter one.

For a deadly virus to flourish, it must meet three critical conditions. First, a new virus—one to which no one has yet developed immunity—must emerge from the animal reservoirs that produce and harbor such pathogens. Second, the virus has to make humans sick. (The vast majority do not.) Finally, it must be able to spread efficiently, through coughing, sneezing, or shaking hands. That combination is rare, but, when it appears, the consequences are almost always disastrous.

The Nobel Prize-winning molecular biologist Joshua Lederberg, who died in 2008, was for years the world's most visionary voice about emerging infectious diseases. "Some people think I am being hysterical, but there are catastrophes ahead," he once wrote. "We live in evolutionary competition with microbes—bacteria and viruses. There is no guarantee that we will be the survivors."

In 2003, Lederberg joined the future F.D.A. commissioner Margaret Hamburg and the pandemic specialist Mark Smolinski to edit a seminal report, in which prominent scientists argued for a much more aggressive defense of the planet. Titled "Microbial Threats to Health," the report recommended that the U.S. greatly expand its early-warning systems, particularly in the developing world. It also urged leaders to strengthen their ability to respond to microbial threats, with new efforts on the federal, state, and local levels. The recommendations were almost completely ignored.

The next year, a highly pathogenic form of avian influenza, H5N1, leaped from waterfowl to chickens and then to humans. Public-health officials were petrified. In Bangkok, I met with Scott Dowell, who led the Thailand office of the C.D.C.'s International Emerging Infections Program. "The world just has no idea what it's going to see if this thing comes," he told me. He paused and then reframed his thought. "When, really. It's when. I don't think we can afford the luxury of the word 'if' anymore."

In a sense, the world was lucky with H5N1. Although the U.S. and other countries mounted a diffident response, the virus turned out to be deadly but not very contagious. Five years later, the situation was reversed. A new influenza virus, designated H1N1, infected nearly a quarter of the global population before vaccines became widely available. This time, the virus was highly contagious but not nearly as deadly as most strains of influenza. The fact that the outbreak was less virulent than public-health officials had feared created its own danger; by encouraging complacency, it did more to expose the world to the risk of a devastating new pandemic than anything else that had happened in decades.

Although Congress had appropriated money to stockpile antiviral medications and protective gear, many scientists felt that the effort was grossly insufficient. "We spend many billions of dollars every year on missile-defense systems," Seth Berkley, a medical epidemiologist who leads the Global Vaccine Alliance, told me. "And yet we will not spend pennies on the dollar to prepare for a catastrophe that is far more likely to affect us all."

After the Ebola outbreak of 2014, Barack Obama implemented one of Lederberg's central recommendations: he established the White House's National Security Council Directorate for Global Health Security and Biodefense, an early-warning system for disease in the developing world. Trump disbanded it in 2018, as part of an effort to streamline the N.S.C. In an appearance before Congress, Fauci was asked if the decision was a mistake. He responded diplomatically: "I wouldn't necessarily characterize it as a mistake. I would say we worked very well with that office. It would be nice if the office was still there."

The combination of money and political will can have extraordinary effects on public health. Under the George W. Bush Administration, Fauci was the principal architect of a landmark program called PEPFAR, the President's Emergency Plan for AIDS Relief.

By the time Bush took office, therapies for H.I.V. had become widely available in Western countries. But, for millions of people in the developing world, these drugs were too expensive or too difficult to obtain. Bush felt that it was unacceptable for the poorest people on earth to die because they could not afford medication that was dispensed routinely in the rich world. He asked Fauci to implement an initiative to prevent and treat H.I.V. on a global scale. It has been uniformly held up as a model of the ways in which global public-health programs can save lives. "PEPFAR has turned around declining life expectancies in many countries and likely saved some countries—even an entire continent—from economic ruin," Harold Varmus, a former director of the N.I.H. and of the National Cancer Institute, wrote in the quarterly journal *Science & Diplomacy*.

But Fauci has at times struggled to compel politicians and businesses to attack the problems that he considers most worrisome. Over the years, he has become concerned about the possible impact of new viruses, particularly a lethal strain of influenza. Other viruses are more consistently deadly; some, like measles, are more contagious. But no virus that we know of is capable of killing as rapidly and as efficiently. "We need a major paradigm shift with influenza vaccines," Fauci told me, four years ago. "The situation is a mess."

Because the flu virus evolves so rapidly, experts deciding how to formulate vaccines can make only a highly educated guess about which strains are most likely to make people sick. Each February, epidemiologists study outbreaks around the world—especially in the Southern Hemisphere, where flu season is under way—to assess which strains might make their way north. The result is always better than nothing. In many years, though, it is woefully inadequate. In the flu season of 2014-15, the vaccine protected less than a fifth of the people who received it. In 2017-18, it worked for a little more than a third. Fauci has long supported the development of an alternative: a universal influenza vaccine, which would provide lasting defense against all strains. “Similar to tetanus, a universal flu vaccine probably would be given every ten years,” he said. “And, if you get one that is really universal, you can vaccinate just about everyone in the world.” But such a vaccine would cost hundreds of millions of dollars to develop and test—and would replace a product that most consumers already think of as good enough. No one has come close to raising the money that such a project will require.

By the beginning of the new millennium, it had become clear that the next microbial threat might not come from a bat or a duck. It could just as well be created by a human being. After the terrorist attacks of September 11, 2001, anonymous letters laced with deadly anthrax spores began arriving at media companies and congressional offices. In the following months, twenty-two people were infected by inhaling anthrax and five died. Suddenly, biological terror posed an entirely new threat—one that has become only more significant and complex in the ensuing years. In 2016, James Clapper, who was the director of National Intelligence during the Obama Administration, listed gene editing as a potential weapon of mass destruction. Many scientists were furious, but he had a point. Researchers have deployed these tools to rewrite the genes of mosquitoes so that they are unable to transmit malaria. If their success in the lab translates to the field, it will be a historic triumph. But the research also raises an alarming possibility: if a scientist can modify the genes of an insect to protect people from malaria, he could almost certainly use the same technology to add a deadly toxin.

Fauci often cites a similar but more immediate paradox. Thanks to genetic engineering, we are more equipped than ever to respond to the threat of a viral pandemic. After the COVID-19 outbreak began, it took scientists less than a month to sequence the genome of the virus. By the end of February, the instructions were on the Internet, and the virus had been re-created in laboratories around the world, by scientists seeking to develop drugs and vaccines.

And yet, despite our mastery of molecular biology, we live in an era in which someone can wake up with an infection in China—or France, Australia, or any other place with an airport—and fly to San Francisco in time for dinner, spreading the virus long before he suspects that there's anything wrong. For most of human history, a virus like COVID-19 might have killed many people in the community where it originated, but then stopped spreading. According to a comprehensive analysis carried out by the *Times*, at least four hundred and thirty thousand people have arrived in the U.S. on direct flights from China since the outbreak began. Forty thousand have arrived in the two months since Trump imposed restrictions on travellers from China trying to enter the country.

Fauci insists that an adequate defense against future pandemics will have to be flexible. "I have been saying for eight, ten years that we should make a list of microbes and try to develop a basic platform vaccine," he told me in 2016. A platform vaccine addresses an entire class of virus, not just a particular strain. "We keep trying to develop a vaccine for one thing—usually the last one—and it's a waste of time," he said. "Every time we get hit, it is always something we didn't expect. So, instead of predetermining what it is you're going to prepare for, make universal platforms."

Such an approach is eminently possible. Using gene-sequence information and synthetic DNA, biologists are now capable of making parts of a vaccine in advance. It takes almost no time to sequence a viral strain, and with that information it should be possible to complete a bespoke vaccine in a matter of weeks. "You could build a chassis for the vaccine, and you would have it on the shelf," Fauci said. "Then all you would need to do is insert the gene of the protein you want to express and make a gazillion doses and send it out."

There are even more futuristic aspirations: the genomics pioneer J. Craig Venter has proposed using a sort of 3-D printer to manufacture vaccines on demand. It is already possible to print the nucleotides that make up DNA and assemble them. Venter argues that, in the time it takes for an infected person to fly from one side of the world to the other, we should be able to print, assemble, and administer a vaccine.

To even contemplate creating these kinds of treatments, Fauci says, would require building an entirely new system for making vaccines before a pandemic arises. But, in addition to the scientific obstacles, this would cost billions of dollars, and no company or politician has been willing to spend the money. Perhaps, just as AIDS transformed our approach to clinical trials, our experience with COVID-19 will change our attitudes about preventing infectious diseases. A proper investment in both research and emergency preparedness would have prevented at least some of the unspeakable human loss we are now experiencing and the economic crash that has just begun.

The COVID-19 epidemic will eventually fade, but the public will demand a reckoning. Inevitably, there will be an investigation, along the lines of the 9/11 Commission, to look into the ramifications of the President's denialism, the shortages in testing and medical equipment, and the dismissal of so many warning signs. Fauci will not necessarily escape criticism. He is an excellent spokesman for the value of scientific research, but he runs a single institute, and he lacks the authority to broadly reshape our response to pandemics. "The kinds of things we really desperately need as foundational tools for dealing with this stuff aren't necessarily research enterprises," Harold Varmus told me. "Tony isn't running C.D.C. He's not running FEMA. To tell him to stockpile defense mechanisms or to move forward surveillance tools into massive operations around the world—that's just not his remit."

Even Fauci's current value as a scientific adviser has been limited by the President's contempt for expertise. Trump's coronavirus kitchen cabinet consists of people like his son-in-law, Jared Kushner, who has no medical knowledge or experience managing crises—yet has been appointed to direct the response to the biggest medical emergency since the influenza pandemic of 1918. Trump has also turned for advice to Dr. Mehmet Oz, who for years has endorsed worthless treatments and used his television show to promote notorious quacks. Trump even seems to think that his trade adviser, Peter Navarro, should debate Fauci about the value of specific drugs. When Navarro, who has a doctoral degree in economics, was asked about his medical qualifications, he said, “I have a Ph.D. And I understand how to read statistical studies, whether it’s in medicine, the law, economics, or whatever.”

Among Navarro’s enthusiasms is the malaria drug hydroxychloroquine, which he believes could cure COVID-19. There is currently no evidence to support this conclusion, as Fauci has pointed out on several occasions. On April 5th, as Trump continued to tout the drug as a miracle cure, a reporter at the daily briefing asked Fauci to comment. Trump refused to allow him to speak. In an appearance two days later, Trump kept up the hype. “I say try it,” he said. “You’re not gonna die from this pill.” Not long afterward, he even suggested that zinc might help.

To plan a coherent biological future, rather than simply scramble to contain each new pandemic, will require an entirely new kind of political commitment. It would certainly include the creation of a permanent position, a special assistant to the President for biological defense. Similar jobs have existed in the past, but not for long, and not with enough influence to matter. David Relman, the Stanford professor, told me, “This kind of job needs somebody with the authority to preside over domestic and international threats, both natural and deliberate. And that person has to sit in the White House with immediate access to the President. Without that, we will really have nothing that can work.”

Until then, we have Fauci, a seventy-nine-year-old infectious-disease expert pinned between Donald Trump and the American people. It can’t be easy. As Fauci recently put it, with characteristic candor, “I give the appearance of being optimistic. But, deep down, I just do everything I possibly can, assuming that the worst will happen, and I’ve got to stop the worst from happening.” ◆

Thanks, Carlos. As you know since Cliff has been in touch with the IDSA, the HHS guidelines will be coming out this week.
Best,
Tony

Hi Tony,

[redacted] (b) (6) I send you greetings and the deepest appreciation.

I am only one of your millions of followers who feel in your debt. But, I am the only one with a magazine that has dedicated a whole article to "the thirst for Tony Fauci."

This will be the least important item on today's to-do list. But, someday, your grandchildren and their children, in turn, will want to read this: https://www.theatlantic.com/technology/archive/2020/04/anthony-fauci-coronavirus-crush/609544/

My best wishes to you.

David

David:

Many thanks for sending this. I could not have even begun to make this up..... Please stay safe and well.
Warm regards,
Tony

Tony,
I would only hope that one of your staff see my email and are prudent to know that this is being sent to him by one of his kin and passes it along to you.

Sincerely,

[redacted] (b) (6)
